NEW QUESTION # 113

Your network contains an on-premises Active Directory domain that syncs to an Azure Active Directory (Azure AD) tenant. The domain contains the domain controllers shown in the following table.

Name	Network location	IP address	Configuration
Server1	On-premises datacenter	10.10.1.1	Domain controller, DNS server
Server2	Azure virtual network named VNET1	10.20.1.1	Domain controller, DNS server

The DNS servers are configured to forward requests to an external DNS service.

You create a new virtual network named VNET2 that is peered to VNET1 and has gateway transit enabled.

You plan to implement an Azure Virtual Desktop host pool in VNET2. The session hosts will be joined to the Active Directory domain.

You need to configure DNS to meet the following requirements:

- Ensure that Azure Virtual Desktop users can resolve on-premises servers and Azure resources.
- Ensure that Azure Virtual Desktop remains operational if a DNS server fails.
- Minimize administrative effort.

What should you configure?

- A. the DNS settings of VNET2 to use the Azure DNS service
- B. the DNS settings of the virtual machines to use Server2 and Server1
- C. the DNS settings of the virtual machines to use the Azure DNS service
- D. the DNS settings of VNET2 to use Server2 and Server1

Answer: D

Explanation:

For AVD hostpools you always configure de DNS in the VNET, never on de VM itself.

As hostpools use a DHCP like principle to configure internet access for the VM's in the hostpool when they are automatically scaled.

NEW QUESTION # 114

Your on-premises network contains an Active Directory domain that syncs with an Azure AD tenant.

You have an Azure Virtual Desktop host pool that contains Windows 11 session hosts joined to the domain.

You need to configure Azure NetApp Files to store user profile containers.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Actions	Answer Area
Create a capacity pool.	
Create a new NFS volume.	
Create a new SMB volume.	> <
Configure an Active Directory connection to the Azure AD tenant.	^ ▼
Create a new Azure NetApp Files account.	
Configure an Active Directory connection to the on-premises domain.	

Answer:

Explanation:

Answer Area

Create a new Azure NetApp Files account.

 Create a capacity pool.

Configure an Active Directory connection to the Azure AD tenant

Create a new SMB volume.

- 2 - Create a capacity pool.
- 3 - Configure an Active Directory connection to the Azure AD tenant.
- 4 - Create a new SMB volume.
