

# Microsoft AZ-204 Exam Dumps in PDF Format

DOWNLOAD the newest ExamDumpsVCE AZ-204 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1FWwRAnP5Fu66CDZDm-Gk73RbshKbb1Q8>

We are engaged in IT certification examinations guide torrent many years, most our products are similar with the real test. Normally questions quantity of our Microsoft AZ-204 guide torrent materials are more than the real test. Sometimes candidates may doubt why our questions are more than the real test. Our AZ-204 Guide Torrent materials are not only including a part of real test questions but also a part of practice questions, buyers can master exam key knowledge better.

Microsoft AZ-204 certification exam is a comprehensive assessment of a developer's skills in developing solutions for Microsoft Azure. AZ-204 exam covers a wide range of topics and evaluates a candidate's proficiency in designing, developing, deploying, and debugging Azure solutions. Obtaining the Microsoft AZ-204 Certification is an excellent way for developers to demonstrate their expertise in Azure and advance their careers in cloud computing.

>> Valid AZ-204 Test Dumps <<

## Mock AZ-204 Exam - Vce AZ-204 Download

Our AZ-204 practice materials are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These AZ-204 training materials win honor for our company, and we treat it as our utmost privilege to help you achieve your goal. As far as we know, our AZ-204 Exam Prep have inspired millions of exam candidates to pursue their dreams and motivated them to learn more high-efficiently. Our AZ-204 practice materials will not let you down.

## Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q361-Q366):

### NEW QUESTION # 361

You need to ensure that PolicyLib requirements are met.

How should you complete the code segment? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Load segments**

Process	
Initialize	
telemetry.Sequence	
ITelemetryProcessor	
ITelemetryInitializer	
telemetry.Context	
EventGridController.EventId.Value	
((EventTelemetry)telemetry).Properties["EventId"]	

**Answer Area**

```
public class IncludeEventId : code segment
{
    public void code segment (ITelemetry telemetry)
    {
        code segment.Properties["EventId"] =
        code segment;
    }
}
```

**Answer:**

**Explanation:**

**Code segments**

Process	
Initialize	
telemetry.Sequence	
ITelemetryProcessor	
ITelemetryInitializer	
telemetry.Context	
EventGridController.EventId.Value	
((EventTelemetry)telemetry).Properties["EventId"]	

**Answer Area**

```
public class IncludeEventId : ITelemetryInitializer
{
    public void Initialize (ITelemetry telemetry)
    {
        ITelemetryProcessor
        EventGridController.EventId.Value
        .Properties["EventId"] =
        ;
    }
}
```

<https://docs.microsoft.com/en-us/azure/azure-monitor/app/api-filtering-sampling>

### NEW QUESTION # 362

You need to migrate on-premises shipping data to Azure.

What should you use?

- A. AzCopy
- B. Azure Cosmos DB Data Migration tool (dt.exe)
- C. Azure Migrate
- D. Azure Database Migration service

**Answer: D**

**Explanation:**

**Explanation**

Migrate from on-premises or cloud implementations of MongoDB to Azure Cosmos DB with minimal downtime by using Azure Database Migration Service. Perform resilient migrations of MongoDB data at scale and with high reliability.

Scenario: Data migration from on-premises to Azure must minimize costs and downtime.

The application uses MongoDB JSON document storage database for all container and transport information.

**References:**

<https://azure.microsoft.com/en-us/updates/mongodb-to-azure-cosmos-db-online-and-offline-migrations-are-now->

Topic 1, Windows Server 2016 virtual machine

**Case study**

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.

**Current environment**

Windows Server 2016 virtual machine

The virtual machine (VM) runs BizTalk Server 2016. The VM runs the following workflows:

- \* Ocean Transport - This workflow gathers and validates container information including container contents and arrival notices at various shipping ports.

- \* Inland Transport - This workflow gathers and validates trucking information including fuel usage, number of stops, and routes.

The VM supports the following REST API calls:

- \* Container API - This API provides container information including weight, contents, and other attributes.

- \* Location API - This API provides location information regarding shipping ports of call and tracking stops.

- \* Shipping REST API - This API provides shipping information for use and display on the shipping website.

Shipping Data

The application uses MongoDB JSON document storage database for all container and transport information.

Shipping Web Site

The

site displays shipping container tracking information and container contents. The site is located at

<http://shipping.wideworldimporters.com/>

Proposed solution

The on-premises shipping application must be moved to Azure. The VM has been migrated to a new Standard\_D16s\_v3 Azure VM by using Azure Site Recovery and must remain running in Azure to complete the BizTalk component migrations. You create a Standard\_D16s\_v3 Azure VM to host BizTalk Server. The Azure architecture diagram for the proposed solution is shown below:

Requirements

Shipping Logic app

The Shipping Logic app must meet the following requirements:

- \* Support the ocean transport and inland transport workflows by using a Logic App.
- \* Support industry-standard protocol X12 message format for various messages including vessel content details and arrival notices.
- \* Secure resources to the corporate VNet and use dedicated storage resources with a fixed costing model.
- \* Maintain on-premises connectivity to support legacy applications and final BizTalk migrations.

Shipping Function app

Implement secure function endpoints by using app-level security and include Azure Active Directory (Azure AD).

REST APIs

The REST API's that support the solution must meet the following requirements:

- \* Secure resources to the corporate VNet.
- \* Allow deployment to a testing location within Azure while not incurring additional costs.
- \* Automatically scale to double capacity during peak shipping times while not causing application downtime.
- \* Minimize costs when selecting an Azure payment model.

Shipping data

Data migration from on-premises to Azure must minimize costs and downtime.

Shipping website

Use Azure Content Delivery Network (CDN) and ensure maximum performance for dynamic content while minimizing latency and costs.

Issues

Windows Server 2016 VM

The VM shows high network latency, jitter, and high CPU utilization. The VM is critical and has not been backed up in the past. The VM must enable a quick restore from a 7-day snapshot to include in-place restore of disks in case of failure.

Shipping website and REST APIs

The following error message displays while you are testing the website:

Failed

to load <http://test-shippingapi.wideworldimporters.com/>: No

'Access-Control-Allow-Origin' header is present on the requested resource. Origin'

<http://test.wideworldimporters.com/> is therefore not allowed access.

**NEW QUESTION # 363**

You plan to deploy a new application to a Linux virtual machine (VM) that is hosted in Azure.

The entire VM must be secured at rest by using industry-standard encryption technology to address organizational security and compliance requirements.

You need to configure Azure Disk Encryption for the VM.

How should you complete the Azure Cli commands? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
az provider register --n Microsoft.KeyVault
resourcegroup="myResourceGroup"
az group create --name $resourcegroup --location westus
keyvault_name=myvaultname$RANDOM
az vm create \
  --resource-group $resourcegroup \
  --location $location \
  --name $vm_name \
  --image $image \
  --os-type Linux \
  --disk-encryption True
az keyvault create \
  --resource-group $resourcegroup \
  --name $keyvault_name \
  --enabled-for-disk-encryption True
az keyvault key create \
  --resource-group $resourcegroup \
  --name $key_name \
  --key-type Software
az vm encryption \
  --resource-group $resourcegroup \
  --vm-name $vm_name \
  --keyvault $keyvault_name \
  --key-name $key_name \
  --volume-type all
```

**Answer:**

**Explanation:**  
Answer Area

```
az provider register --n Microsoft.KeyVault
resourcegroup="myResourceGroup"
az group create --name $resourcegroup --location westus
keyvault_name=myvaultname$RANDOM
az vm create \
  --resource-group $resourcegroup \
  --location $location \
  --name $vm_name \
  --image $image \
  --os-type Linux \
  --disk-encryption True
az keyvault create \
  --resource-group $resourcegroup \
  --name $keyvault_name \
  --enabled-for-disk-encryption True
az keyvault key create \
  --resource-group $resourcegroup \
  --name $key_name \
  --key-type Software
az vm encryption \
  --resource-group $resourcegroup \
  --vm-name $vm_name \
  --keyvault $keyvault_name \
  --key-name $key_name \
  --volume-type all
```

Explanation

```
az provider register -n Microsoft.KeyVault
resourcegroup= "myResourceGroup"
az group create --name $resourcegroup --location westu
keyvault name=myvaultname$RANDOM
```

```
az  create\
  vm
  keyvault
  keyvault key
  vm encryption
  name $keyvault_name \
  -resource -group $resourcegroup\
  -location eastus \
  -enabled-for-disk-encryption True
```

```
az  create\
  vm
  keyvault
  keyvault key
  vm encryption
  -vault-name $keyvault_name\
  -name Name1 \
  -protection software
```

```
az  create \
vm
keyvault
keyvault key
vm encryption
```

```
- --resource-group $resourcegroup \
- --name Name2
- --image Canonical:UbuntuServer:16.04-LTS:latest \
- --admin-username azureuser \
- --generate-ssh-keys \
- --data-disk-sizes-gb 5
```

```
az  create \
vm
keyvault
keyvault key
vm encryption
```

```
- --resource-group $resourcegroup \
- --name Name2 \
- --disk-encryption-keyvault $keyVault_name \
- --key-encryption-key Name1 \
- --volume-type
```

Box 1: keyvault

Create an Azure Key Vault with az keyvault create and enable the Key Vault for use with disk encryption.

Specify a unique Key Vault name for keyvault\_name as follows:

```
keyvault_name=myvaultname$RANDOM
```

```
az keyvault create \
--name $keyvault_name \
--resource-group $resourcegroup \
--location eastus \
--enabled-for-disk-encryption True
```

Box 2: keyvault key

The Azure platform needs to be granted access to request the cryptographic keys when the VM boots to decrypt the virtual disks.

Create a cryptographic key in your Key Vault with az keyvault key create. The following example creates a key named myKey:

```
az keyvault key create \
--vault-name $keyvault_name \
--name myKey \
--protection software
```

Box 3: vm

Create a VM with az vm create. Only certain marketplace images support disk encryption. The following example creates a VM named myVM using an Ubuntu 16.04 LTS image:

```
az vm create \
--resource-group $resourcegroup \
--name myVM \
--image Canonical:UbuntuServer:16.04-LTS:latest \
--admin-username azureuser \
--generate-ssh-keys \
```

Box 4: vm encryption

Encrypt your VM with az vm encryption enable:

```
az vm encryption enable \  
--resource-group $resourcegroup \  
--name myVM \  
--disk-encryption-keyvault $keyvault_name \  
--key-encryption-key myKey \  
--volume-type all
```

Note: seems to an error in the question. Should have enable instead of create.

Box 5: all

Encrypt both data and operating system

<https://docs.microsoft.com/bs-latn-ba/azure/virtual-machines/linux/encrypt-disks>

### NEW QUESTION # 364

You have a web app named MainApp. You are developing a triggered App Service background task by using the WebJobs SDK. This task automatically invokes a function code whenever any new data is received in a queue.

You need to configure the services.

Which service should you use for each scenario? To answer, drag the appropriate services to the correct scenarios. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

The screenshot shows a drag-and-drop interface with three columns: 'Services', 'Scenario', and 'Service'. Under 'Services', there are three boxes: 'Logic Apps', 'WebJobs', and 'Flow'. Under 'Scenario', there are two descriptions: 'Process a queue data item.' and 'Manage all code segments from the same DevOps environment.' Under 'Service', there are two empty boxes. A watermark 'Microsoft examdumps.com' is visible across the interface.

**Answer:**

Explanation:

The screenshot shows the same drag-and-drop interface as above, but with the correct answers placed. 'Logic Apps' and 'WebJobs' are highlighted with green boxes in the 'Services' column. 'WebJobs' is placed in the first empty box in the 'Service' column, and 'Flow' is placed in the second empty box. A watermark 'Microsoft examdumps.com' is visible.

Explanation:

Box 1: WebJobs

A WebJob is a simple way to set up a background job, which can process continuously or on a schedule. WebJobs differ from a cloud service as it gives you get less fine-grained control over your processing environment, making it a more true PaaS service.

Box 2: Flow

Incorrect Answers:

Azure Logic Apps is a cloud service that helps you schedule, automate, and orchestrate tasks, business processes, and workflows when you need to integrate apps, data, systems, and services across enterprises or organizations. Logic Apps simplifies how you design and build scalable solutions for app integration, data integration, system integration, enterprise application integration (EAI), and business-to-business (B2B) communication, whether in the cloud, on premises, or both.

References:

<https://code.msdn.microsoft.com/Processing-Service-Bus-84db27b4>

### NEW QUESTION # 365

You are preparing to deploy an application to an Azure Kubernetes Service (AKS) cluster.

The application must only be available from within the VNet that includes the cluster.

You need to deploy the application.

How should you complete the deployment YAML? To answer, drag the appropriate YAML segments to the correct locations.

Each YAML segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

```
apiVersion: v1
kind: Code segment
metadata:
  name: web-app
  annotations:
    service.beta.kubernetes.Code segment: "true"
spec:
  type: Code segment
ports:
- port: 80
selector:
  app: web-app
```

**Answer:**

Explanation:

```
apiVersion: v1
kind: Service
metadata:
  name: web-app
  annotations:
    service.beta.kubernetes.azure-load-balancer-internal: "true"
spec:
  type: LoadBalancer
ports:
- port: 80
selector:
  app: web-app
```

Explanation

```

apiVersion: v1
kind: Service
metadata:
  name: web-app
  annotations:
    service.beta.kubernetes.io/azure-load-balancer-internal: "true"
spec:
  type: LoadBalancer
  ports:
  - port: 80
  selector:
    app: web-app

```

To create an internal load balancer, create a service manifest named `internal-lb.yaml` with the service type `LoadBalancer` and the `azure-load-balancer-internal` annotation as shown in the following example:

YAML:

```

apiVersion: v1
kind: Service
metadata:
  name: internal-app
  annotations:
    service.beta.kubernetes.io/azure-load-balancer-internal: "true"
spec:
  type: LoadBalancer
  ports:
  - port: 80
  selector:
    app: internal-app
References:
https://docs.microsoft.com/en-us/azure/aks/internal-lb

```

## NEW QUESTION # 366

.....

You can download a free demo of Microsoft exam study material at ExamDumpsVCE. The free demo of AZ-204 exam product will eliminate doubts about our AZ-204 PDF and practice exams. You should avail this opportunity of Developing Solutions for Microsoft Azure AZ-204 exam dumps free demo. It will help you pay money without any doubt in mind. We ensure that our AZ-204 Exam Questions will meet your AZ-204 test preparation needs. If you remain unsuccessful in the AZ-204 test after using our AZ-204 product, you can ask for a full refund. ExamDumpsVCE will refund you as per the terms and conditions.
