AZ-800: Actual Administering Windows Server Hybrid Core Infrastructure Test Pdf - Free PDF Quiz 2025 Unparalleled AZ-800

We understand you not only consider the quality of our Administering Windows Server Hybrid Core Infrastructure prepare torrents, but price and after-sales services and support, and other factors as well. So our Administering Windows Server Hybrid Core Infrastructure prepare torrents contain not only the high quality and high accuracy AZ-800 Test Braindumps but comprehensive services as well. By the free trial services you can get close realization with our AZ-800 quiz guides, and know how to choose the perfect versions before your purchase.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q276-Q281):

NEW QUESTION # 276
SIMULATION

Task 5

You have an application that is copied to a folder named C:\app on SRV1. C:\app also contains also a Dockerfile for the app. On SRV1, you need to create a container image for the application by using the Dockerfile. The container image must be named app1.

Answer:

Explanation:

See the solution of this Task below

Explanation:

Explore

To create a container image named app1 for your application using the Dockerfile in the C:\app directory on SRV1, follow these steps:

Step 1: Open PowerShell or Command Prompt First, open PowerShell or Command Prompt on SRV1.

Step 2: Navigate to the Application Directory Change to the directory where your application and Dockerfile are located:

```
cd C:\app
```

Step 3: Build the Container Image Use the docker build command to create the container image. The -t flag tags the image with the name app1:

```
docker build -t app1 .
```

The period . at the end of the command tells Docker to use the Dockerfile in the current directory.

Step 4: Verify the Image Creation After the build process completes, verify that the image app1 has been created successfully by listing all images:

```
docker images
```

You should see app1 in the list of images.

Step 5: Use the Image Now, you can use the image app1 to run containers or push it to a container registry if needed.

NEW QUESTION # 277

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

You need to ensure that the virtual machines can join Azure AD DS.

Which three actions should perform in sequence? To answer, move the appropriate actions from the list of action of the answer area and arrange them in the correct order.

Actions
Run the Active Directory Domain Services Installation Wizard
Create an Azure virtual network.
Install the Active Directory Domain Services role.
Install Azure AD Connect.
Modify the settings of the Azure virtual network.
Create an Azure AD DS instance.

Answer Area

Microsoft
validexam.com

Answer:

Explanation:

Create an Azure virtual network.

Create an Azure AD dS instance.

Modify the settings of the Azure virtual network.

- 1 - Create an Azure virtual network.
- 2 - Create an Azure AD dS instance.
- 3 - Modify the settings of the Azure virtual network.

NEW QUESTION # 278

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTSITELINK.

You open a new branch office that contains only client computers.

You need to ensure that the client computers in the new office are primarily authenticated by the domain controllers in Site1.

Solution: You create a new site named Site4 and associate Site4 to DEFAULTSITELINK.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 279

Your on-premises network contains an Active Directory domain named contoso.com. You have an Azure AD tenant. You plan to sync contoso.com with the Azure AD tenant by using Azure AD Connect cloud sync. You need to create an account that will be used by Azure AD Connect cloud sync. Which type of account should you create?

- A. system-assigned managed identity
- B. group managed service account (gMSA)
- C. user
- D. InetOrgPerson

Answer: C

NEW QUESTION # 280

You have an on-premises server named Server 1 that runs Windows Server. You have an Azure subscription that contains a virtual network named VNet1. You need to connect Server1 to VNet1 by using Azure Network Adapter. What should you use?

- A. Azure AD Connect
- B. the Azure portal
- C. Device Manager
- D. Windows Admin Center

Answer: A
