Reliable Microsoft GH-900 Exam Tutorial - GH-900 Certification Sample Questions

In the PDF version, SureTorrent have included real GH-900 exam questions. All the Selling GitHub Foundations (GH-900) exam questionnaires are readable via laptops, tablets, and smartphones. Microsoft GH-900 exam questions in this document are printable as well. You can carry this file of Microsoft GH-900 PDF Questions anywhere you want. In the same way, SureTorrent update its Selling GitHub Foundations (GH-900) exam questions bank in the PDF version so users get the latest material for GH-900 exam preparation.

Microsoft GitHub Foundations Sample Questions (Q53-Q58):

NEW QUESTION # 53

Which of the following are included as pre-defined repository roles?
(Each answer presents a complete solution. Choose three.)

- A. Triage

- B. Delete
- C. Security
- **D. Write**
- E. View
- **F. Maintain**

Answer: A,D,F

Explanation:

GitHub provides several pre-defined repository roles that determine the level of access and permissions a user has within a repository. The roles that are included by default are:

Triage: Allows users to manage issues and pull requests without write access to the code.

Maintain: Provides more extensive access, including managing settings, but without full administrative control.

Write: Grants permission to push changes and manage issues and pull requests.

Roles like "Security" and "Delete" are not standard pre-defined roles, and "View" is generally referred to as "Read" in GitHub's permission structure.

NEW QUESTION # 54

What features are offered by Copilot for Business that are not offered by Copilot for individuals?

(Each answer presents a complete solution. Choose three.)

- A. Plugs directly into the editor
- **B. Support for organization or enterprise GitHub accounts**
- C. Offers multi-line function suggestions
- D. VPN proxy support via self-signed certificates
- **E. Blocks suggestions matching public code**
- **F. Organization-wide policy management**

Answer: B,E,F

Explanation:

GitHub Copilot for Business offers several features that are tailored to the needs of organizations, providing more control, security, and support compared to the individual version.

Organization-wide Policy Management:

Option B is correct because Copilot for Business allows organizations to manage policies across their entire user base, providing control over how Copilot is used within the organization.

Blocking Suggestions Matching Public Code:

Option C is correct because Copilot for Business includes enhanced security features, such as blocking code suggestions that match public code to prevent inadvertent use of unlicensed code.

Support for Organization or Enterprise GitHub Accounts:

Option E is correct because Copilot for Business supports integration with GitHub Enterprise accounts, offering additional administrative controls and integration capabilities.

Incorrect Options:

Option A (multi-line function suggestions) is a feature available in both individual and business versions, so it does not differentiate the business offering.

Option D (VPN proxy support via self-signed certificates) is not a primary differentiator of Copilot for Business.

Option F (plugs directly into the editor) is true for both individual and business versions, so it is not unique to Copilot for Business.

NEW QUESTION # 55

Which of the following are advantages of saved replies?

(Each correct answer presents part of the solution. Choose two.)

- A. Saved replies are allocated at the enterprise level for all users.
- **B. Saved replies are tied to a GitHub user's personal account.**
- C. Saved replies will send auto notifications when a user is tagged to an issue.
- **D. Saved replies allow you to create a reusable response to issues and pull requests.**

Answer: B,D

Explanation:

Saved replies in GitHub are a feature that allows users to create and save templates of commonly used responses for issues and pull requests. This feature can significantly enhance productivity and ensure consistent communication.

Saved Replies Are Tied to a User's Personal Account:

Option A is correct because saved replies are specific to a user's GitHub account, meaning they are accessible to the user across all repositories they have access to.

Saved Replies Allow Reusable Responses:

Option C is correct because the primary purpose of saved replies is to allow users to create reusable responses for issues and pull requests, saving time and ensuring consistency.

Incorrect Options:

Option B is incorrect because saved replies are not allocated at the enterprise level; they are specific to individual user accounts.

Option D is incorrect because saved replies do not send auto notifications; they are manually inserted by the user when responding to issues or pull requests.

NEW QUESTION # 56

Who can be assigned to an Issue or pull request?

(Each answer presents a complete solution. Choose two.)

- A. Anyone who has a personal GitHub account
- B. Anyone who has an enterprise GitHub account
- C. Anyone with write permissions to the repository
- D. Anyone who has commented on the Issue or pull request

Answer: C,D

Explanation:

In GitHub, issues and pull requests (PRs) are essential tools for managing work and collaboration in a project. Assigning individuals to these issues or PRs is a way to indicate responsibility for addressing the issue or completing the PR.

Anyone with write permissions to the repository:

Users who have write permissions to a repository can be assigned to issues and pull requests. Write permissions allow users to push changes to the repository, create branches, and modify issues and pull requests. Assigning them to an issue or PR ensures they are recognized as responsible for the task.

Anyone who has commented on the Issue or pull request:

GitHub allows you to assign issues or pull requests to users who have already engaged with the discussion by commenting on it. This feature is particularly useful for quickly assigning tasks to those who are already involved in the conversation.

Incorrect Options:

Option A is incorrect because having an enterprise GitHub account alone does not necessarily grant the ability to be assigned to issues or PRs. Permission to assign is based on repository-specific roles and permissions.

Option C is incorrect because not all personal GitHub accounts can be assigned to issues or PRs. The user needs either write permissions to the repository or must have commented on the issue or PR.

This detailed explanation provides clarity on GitHub's assignment mechanics for issues and pull requests, reflecting the platform's collaborative nature.

NEW QUESTION # 57

Which of the following best describes cloning a repository?

- A. It imports your source code into a new repository.
- B. It creates a copy of the repository on your local machine.
- C. It retrieves code updates from the remote repository.
- D. It creates a copy of the repository on GitHub.com.

Answer: B

Cloning a repository in GitHub refers to creating a copy of the repository on your local machine. This allows you to work on the project offline, make changes, and later push those changes back to the remote repository. It does not involve creating a copy on GitHub.com (which would be forking), retrieving updates (which would be pulling), or importing source code into a new repository (which is done differently).
