✅ Three Practical Learning Formats

We provide study materials in various formats to suit different learning styles:

- 📄 **PDF Layout** – Study on any device, anytime, anywhere.
- 💻 **Desktop Exercise Test** – Simulates real exam conditions with customizable mock tests.
- 🌐 **Web-Based Drill Test** – No installation required—practice directly from your browser.

Our GitHub GitHub-Advanced-Security exam dumps give help to give you an idea about the actual GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam. You can attempt multiple GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam questions on the software to improve your performance. Lead2Passed has many GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) practice questions that reflect the pattern of the real GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam. Lead2Passed allows you to create a GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam dumps according to your preparation. It is easy to create the GitHub GitHub-Advanced-Security practice questions by following just a few simple steps. Our GitHub-Advanced-Security exam dumps are customizable based on the time and type of questions.

Have you been many years at your position but haven't got a promotion? Or are you a new comer in your company and eager to make yourself outstanding? Our GitHub-Advanced-Security exam materials can help you. With our GitHub-Advanced-Security exam questions, you can study the most latest and specialized knowledge to deal with the problems in you daily job as well as get the desired GitHub-Advanced-Security Certification. You can lead a totally different and more successfully life latter on.

Exam GitHub-Advanced-Security Torrent, Valid Real GitHub-Advanced-Security Exam

If you buy our GitHub-Advanced-Security preparation questions, we can promise that you can use our study materials for study in anytime and anywhere. Because our study system can support you study when you are in an offline state. In addition, Our GitHub-

Advanced-Security training quiz will be very useful for you to improve your learning efficiency, because you can make full use of your all spare time to do test. It will bring a lot of benefits for you beyond your imagination if you buy our GitHub-Advanced-Security Study Materials.

GitHub Advanced Security GHAS Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10

When secret scanning detects a set of credentials on a public repository, what does GitHub do?

- A. It sends a notification to repository members.
- B. It displays a public alert in the Security tab of the repository.
- C. It scans the contents of the commits for additional secrets.
- D. It notifies the service provider who issued the secret.

Answer: D

Explanation:

When a public repository contains credentials that match known secret formats, GitHub will automatically notify the service provider that issued the secret. This process is known as "secret scanning partner notification". The provider may then revoke the secret or contact the user directly.

GitHub does not publicly display the alert and does not send internal repository notifications for public detections.

NEW QUESTION # 11

Assuming that no custom Dependabot behavior is configured, who has the ability to merge a pull request created via Dependabot security updates?

- A. A user who has read access to the repository
- B. A user who has write access to the repository
- C. A repository member of an enterprise organization
- D. An enterprise administrator

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

By default, users with write access to a repository have the ability to merge pull requests, including those created by Dependabot for security updates. This access level allows contributors to manage and integrate changes, ensuring that vulnerabilities are addressed promptly.

Users with only read access cannot merge pull requests, and enterprise administrators do not automatically have merge rights unless they have write or higher permissions on the specific repository.

NEW QUESTION # 12

When using CodeQL, what extension stores query suite definitions?

- A. .ql
- B. .qls
- C. .yaml
- D. .qll

Answer: B

Explanation:

Query suite definitions in CodeQL are stored using the .qls file extension. A query suite defines a collection of queries to be run during an analysis and allows for grouping them based on categories like language, security relevance, or custom filters.

In contrast:

- * .ql files are individual queries.
- * .qll files are libraries used by .ql queries.
- * .yaml is used for workflows, not query suites.

NEW QUESTION # 13

Which of the following steps should you follow to integrate CodeQL into a third-party continuous integration system? (Each answer presents part of the solution. Choose three.)

- A. Write queries
- B. Process alerts
- C. Install the CLI
- D. Analyze code
- E. Upload scan results

Answer: C,D,E

Explanation:

When integrating CodeQL outside of GitHub Actions (e.g., in Jenkins, CircleCI):

* Install the CLI: Needed to run CodeQL commands.

* Analyze code: Perform the CodeQL analysis on your project with the CLI.

* Upload scan results: Export the results in SARIF format and use GitHub's API to upload them to your repo's security tab.

You don't need to write custom queries unless extending functionality. "Processing alerts" happens after GitHub receives the results.

NEW QUESTION # 14

Which of the following options would close a Dependabot alert?

- A. Leaving the repository in its current state
- B. Viewing the dependency graph
- C. Creating a pull request to resolve the vulnerability that will be approved and merged
- D. Viewing the Dependabot alert on the Dependabot alerts tab of your repository

Answer: C

Explanation:

A Dependabot alert is only marked as resolved when the related vulnerability is no longer present in your code

- specifically after you merge a pull request that updates the vulnerable dependency.

Simply viewing alerts or graphs does not affect their status. Ignoring the alert by leaving the repo unchanged keeps the vulnerability active and unresolved.

NEW QUESTION # 15

.....

You can pass your GitHub GitHub-Advanced-Security certification exam in less time, without wasting time and money on outdated or unreliable GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam study materials. Don't let fear or a lack of resources hold you back from achieving your goals, trust Lead2Passed GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) practice test material and achieve the highest marks in your GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam.
