CompTIA Network+ Certification Exam Sample Questions (Q309-Q314):

NEW QUESTION # 309
A network administrator for a small office is adding a passive IDS to its network switch for the purpose of inspecting network traffic. Which of the following should the administrator use?

- A. API integration
- B. Syslog collection
- C. SNMP trap
- D. Port mirroring

Answer: D

Explanation:
Port mirroring, also known as SPAN (Switched Port Analyzer), is used to send a copy of network packets seen on one switch port (or an entire VLAN) to another port where the IDS is connected. This allows the IDS to passively inspect network traffic without interfering with the actual traffic flow. Port mirroring is an essential feature for implementing IDS in a network for traffic analysis and security monitoring.References:CompTIA Network+ study materials.

NEW QUESTION # 310
Which of the following allows a remote user to connect to the network?

- A. API gateway
- B. Jump box
- C. Client-to-site VPN
- D. Command-line interface

Answer: C

Explanation:
A Client-to-Site VPN allows a remote user to securely connect to a company's internal network, providing access as if they were physically on-site.

NEW QUESTION # 311
A network administrator is troubleshooting a connectivity issue between two devices on two different subnets.
The administrator verifies that both devices can successfully ping other devices on the same subnet. Which of the following is the most likely cause of the connectivity issue?

- A. Wrong duplex settings
- B. Faulty Ethernet cable
- C. Incorrect default gateway
- D. VLAN mismatch

Answer: C

Explanation:
When two devices on different subnets are unable to communicate, but can communicate with other devices on their own subnet, the issue is most often related torouting. Devices on different subnets require adefault gatewayto route traffic between networks.
* If thedefault gateway is incorrectly configured, the device won't know how to reach other subnets.
* Faulty cables (Option B) or duplex mismatches (Option C) would likely cause connectivity issues even within the local subnet, which is not the case here.
* VLAN mismatches (Option D) are typically issues with switch port configurations and would likely cause total loss of connectivity, including within the same subnet.
#So, the most probable andlogical causeis anincorrect default gateway.

NEW QUESTION # 312
A network technician needs to resolve some issues with a customer's SOHO network. The customer reports that some of the PCs are not connecting to the network, while others appear to be working as intended.
INSTRUCTIONS
Troubleshoot all the network components.
Review the cable test results first, then diagnose by clicking on the appropriate PC, server, and Layer 2 switch.
Identify any components with a problem and recommend a solution to correct each problem.

NEW QUESTION # 313
Which of the following panels would be best to facilitate a central termination point for all network cables on the floor of a company building?

- A. Patch
- B. MDF
- C. UPS
- D. Rack

Answer: A

Explanation:
A patch panel is the best choice to facilitate a central termination point for all network cables on the floor of a company building. Patch panels are used to manage and organize multiple network cables, providing a central point where all cables converge. This setup allows for easy management, troubleshooting, and reconfiguration of network connections. The other options, such as UPS (Uninterruptible Power Supply), MDF (Main Distribution Frame), and rack, serve different purposes and are not specifically designed for the central termination of network cables.
