# NCA-6.10 Valid Exam Simulator - NCA-6.10 Reliable Exam Sims

The passing rate of our NCA-6.10 study materials is 99% and the hit rate is also high. Our study materials are selected strictly based on the real NCA-6.10 exam. Our expert team guarantees that each answer and question is useful and valuable. We also update frequently to guarantee that the client can get more learning NCA-6.10 resources and follow the trend of the times. So if you use our study materials you will pass the test with high success probability.

When you decide to pass NCA-6.10 exam, you must want to find a good study materials to help you prepare for your exam. If you decide to choice our products as your study tool, you will be easier to pass your exam and get the NCA-6.10 certification in the shortest time. So do not hesitate and buy our NCA-6.10 Test Torrent, an unexpected surprise is awaiting you, we believe you will prefer to our NCA-6.10 test questions than other study materials. In order to let you understand our NCA-6.10 exam prep in detail, we are going to introduce our products to you.

# Latest Nutanix NCA-6.10 Exam Questions in PDF Format

The field of Nutanix is growing rapidly and you need the Nutanix NCA-6.10 certification to advance your career in it. But clearing

the Nutanix Certified Associate v6.10 (NCA-6.10) test is not an easy task. Applicants often don't have enough time to study for the NCA-6.10 Exam. They are in desperate need of real NCA-6.10 exam questions which can help them prepare for the Nutanix Certified Associate v6.10 (NCA-6.10) test successfully in a short time.

# Nutanix Certified Associate v6.10 Sample Questions (Q61-Q66):

### NEW QUESTION # 61
An administrator is considering a data protection strategy between two sites. There is a 10ms round trip latency between the two clusters. Which data protection solution can the administrator implement that minimizes data loss in the event of a disaster?

- A. Async DR
- B. Metro Availability
- C. NearSync Replication
- D. Synchronous Replication

**Answer: C**

Explanation:
The correct answer is A. NearSync Replication.
Key Concepts from Official Nutanix Documentation:
Nutanix supports various types of data replication methods depending on the Recovery Point Objective (RPO), Recovery Time Objective (RTO), and the latency between the sites.
* Metro Availabilityrequires a maximum latency of<5ms RTTand is used forzero RPO synchronous replication. Since the given latency is 10ms,Metro Availability is not supportedin this case.
Reference: Nutanix Bible - Metro Availability Section
Prism UI Navigation: Protection Domains > Metro Availability
Synchronous Replicationis often synonymous withMetro Availabilityin Nutanix's implementation. Thus, it is similarly bound by the <5ms RTT requirement.
Async DR (Asynchronous Disaster Recovery)allows for more relaxed RPOs, typically1 hour or more, which doesnot minimize data lossin the event of a disaster.
NearSync Replicationsupports anRPO as low as 1 minuteand issuitable for up to 20ms RTT latency. It utilizeslightweight snapshotsandschedule-based replicationto deliverlow-RPO protectioneven over relatively long distances and moderate latencies.
Reference: Nutanix Data Protection Guide - NearSync Overview
Prism UI Navigation: Data Protection > Protection Domains > Schedule (with 1-minute RPO option) Detailed Source References:
Nutanix Data Protection and DR Guide - v5.x and later:"NearSync replication enables you to achieve RPOs as low as 1 minute and is designed to work with round-trip latencies of up to 20ms." Prism Central UI:Navigate toProtection > Data Protection > Protection Domains > Create Schedule# Set schedule type to "NearSync" and observe the 1-minute RPO options.
Hence, since 10ms RTTexceeds Metro Availability requirementsbut iswell within NearSync's acceptable latency, the best choice thatminimizes data lossis:

### NEW QUESTION # 62
An administrator is performing AHV upgrades on an 8-node cluster configured with Redundancy Factor 3.
How many nodes would be placed into maintenance mode simultaneously?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: B**

Explanation:
In a cluster configured with Redundancy Factor 3 (RF3), the system ensures that data is replicated across at least three nodes to tolerate the failure of two nodes. During an AHV upgrade, Nutanix only placesone node at a timeinto maintenance mode, even in an RF3 configuration, to minimize the impact on data redundancy and cluster operations.
* A. 1:Correct, as AHV upgrades proceed node by node in RF3.
* B. 2, C. 3, D. 4:These options are incorrect, as only one node is upgraded at a time regardless of RF3.
References:
Nutanix AOS Upgrade Guide.
Nutanix Support KB Article on RF3 Behavior and Maintenance.

**NEW QUESTION # 63**

Which storage protocol is supported for a datastore when using ESXi as the hypervisor within a Nutanix cluster?

- A. SMB
- B. LVM
- C. NFS
- D. iSCSI

**Answer: C**

Explanation:

When using ESXi as the hypervisor in a Nutanix cluster, the supported storage protocol for a datastore isNFS (Network File System). Nutanix exposes its distributed storage to ESXi hosts using NFS for VM storage.

This protocol is simple to configure and provides high performance and reliability through Nutanix's data services.

Other options:

* iSCSI: Not typically used for ESXi datastores but can be utilized for specific use cases like external storage connectivity.
* SMB: Not supported for ESXi datastores.
* LVM: Logical Volume Management is not used in this context.

**NEW QUESTION # 64**

What type of NTP/time sources are recommended for Nutanix clusters?

- A. Windows time sources
- B. Internal NTP sources
- C. External ISP NTP sources
- D. Rate-limited NTP sources

**Answer: B**

Explanation:

The correct answer isB. Internal NTP sources.

Nutanix strongly recommends configuringreliable internal NTP sources(e.g., enterprise-managed NTP servers or domain NTP servers) to ensure:

* Time consistency across all nodes and CVMs
* Accurate logging, monitoring, authentication (e.g., Kerberos), and cluster operations
* Avoiding dependency onexternal/public NTPsources, which may berate-limited, unavailable, or blockedby firewalls Clarifications:
* A (Windows time sources):Generally discouraged unless they are configured to use a stratum 1/2 reliable upstream source.
* C (Rate-limited sources):Not recommended; can result in dropped or inconsistent time updates.
* D (External ISP NTP):Not preferred for production clusters due to reliability concerns.

Prism UI Navigation Path:

Settings > NTP Servers

Official Reference:

* Nutanix Best Practices Guide - NTP Configuration
* Excerpt: "Use reliable and consistent internal NTP servers for all Nutanix clusters to maintain time synchronization."

**NEW QUESTION # 65**

An administrator has spent time correcting specific issues that have been identified by NCC Health Checks in Prism Element.

How can just the checks that previously did not pass be executed again to confirm they are all resolved?

- A. Select Run Check for each check worked.
- B. Run ncc health checks run_all.
- C. Select Only Failed And Warning Checks.
- D. Run LCM Pre-Upgrade to trigger NCC Checks.

**Answer: C**

Explanation:
To rerun only the health checks that previously failed or issued warnings, the administrator can select theOnly Failed and Warning Checksoption in Prism Element. This targeted approach helps verify that resolved issues have been addressed without rerunning all checks unnecessarily.
Steps:
* Navigate toPrism Element > Health > NCC Checks.
* Filter forOnly Failed and Warning Checksand rerun them.
Other options:
* A. Run LCM Pre-Upgrade: Runs pre-upgrade checks, not related to health check validation.
* B. Runncc health_checks run_all: Executes all checks, not just failed ones.
* C. Select Run Check for each check worked: Requires manual execution for each check.
