Nutanix Certified Professional - Cloud Native v6.10 Sample Questions (Q82-Q87):

NEW QUESTION # 82

A Cloud Engineer is deploying an NKP cluster into an AWS environment. By default, when deploying NKP on AWS infrastructure, it generates the supporting infrastructure necessary for the cluster (VPC, subnets, ELBs). However, the AWS team has insisted that the NKP cluster be deployed on existing AWS infrastructure. How can the engineer meet this requirement?

- A. Create an overrides file with the pre-existing VPC, subnets, and ELB to use. When using the `nkp create cluster aws` command set, include the overrides parameter with the overrides file that was created.
- B. When using the `nkp adopt infrastructure aws` command set, include the valid parameters with the pre-existing VPC, subnets, and ELB to use. Deploy the NKP cluster using the `nkp create cluster aws` command set.
- C. When using the `nkp create cluster aws` command set, include the valid parameters with the pre-existing VPC, subnets, and ELB to use.
- D. Create an NKP infrastructure provider for AWS in the NKP UI. When deploying the NKP cluster through the UI, specify the pre-existing VPC, subnets, and ELB to use in the appropriate fields of the 'Infrastructure' section of the Create Cluster page.

Answer: A

NEW QUESTION # 83

A Platform Engineer needs to create an NKP cluster on vSphere infrastructure, using the vSphere provisioning method. The cluster needs to have 3 worker node pools:

First node pool should consist of 6 worker nodes

Second node pool should consist of 3 worker nodes

Third node pool should consist of 3 worker nodes Additionally, the worker nodes in the first node pool should be set to 10 CPUs, the second node pool workers should be set to 8 CPUs, and the third node pool workers should be set to 6 CPUs. What is the

proper way to create the NKP cluster using the NKP CLI?

- A. First, execute the `nkp create cluster vsphere` command, including the following parameters: `--worker-replicas 6--worker-cpus 10` Then, execute the `nkp create nodepool vsphere` command, including the following parameters: `--replicas 3--cpus 6`
- B. When executing the `nkp create cluster vsphere` command, include the following parameters: `--node-pools 3--worker-replicas 6,3,3--worker-cpus 10,8,6`
- C. First, execute the `nkp create cluster vsphere` command, including the following parameters: `--worker-replicas 6--worker-cpus 10` Then, execute the `nkp create nodepools vsphere` command, including the following parameters: `--replicas 3,3--cpus 8,6`
- D. First, execute the `nkp create cluster vsphere` command, including the following parameters: `--worker-replicas 6--worker-cpus 10` Then, execute the `nkp create nodepool vsphere` command, including the following parameters: `--worker-replicas 3--worker-cpus 8` Then, execute the `nkp create nodepool vsphere` command, including the following parameters: `--worker-replicas 3--worker-cpus 6`
