

NCP-DB Passing Score Feedback - Exam NCP-DB Duration

NCP-DB Database Automation Certification Details	
Exam Code	NCP-DB
Full Exam Name	Nutanix Certified Professional - Database Automation
No. of Questions	75
Online Practice Exam	Nutanix Certified Professional - Database Automation (NCP-DB) Practice Test
Sample Questions	Nutanix NCP-DB Sample Questions
Passing Score	3000/1000-6000
Time Limit	120 minutes
Exam Fees	199 USD
Become successful with VMEexam.com	

DOWNLOAD the newest ExamCost NCP-DB PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1SlKh9RapU0RP0wOqKOS9J0nN8-tU4wL>

NCP-DB study materials can expedite your review process, inculcate your knowledge of the exam and last but not the least, speed up your pace of review dramatically. The finicky points can be solved effectively by using our NCP-DB exam questions. With a high pass rate as 98% to 100% in this career, we have been the leader in this market and helped tens of thousands of our loyal customers pass the exams successfully. Just come to buy our NCP-DB learning guide and you will love it.

The software version of our NCP-DB study engine is designed to simulate a real exam situation. You can install it to as many computers as you need as long as the computer is in Windows system. With our software of NCP-DB guide exam, you can practice and test yourself just like you are in a real exam. The results of your test will be analyzed and a statistics will be presented to you. So you can see how you have done and know which kinds of questions of the NCP-DB Exam are to be learned more.

>> NCP-DB Passing Score Feedback <<

Exam NCP-DB Duration | NCP-DB Valid Real Test

By using our NCP-DB study engine, your abilities will improve and your mindset will change. Who does not want to be a positive person? This is all supported by strength! In any case, a lot of people have improved their strength through NCP-DB Exam simulating. They now have the opportunity they want. Whether to join the camp of the successful ones, purchase NCP-DB learning braindumps, you decide for yourself!

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q249-Q254):

NEW QUESTION # 249

An administrator needs the ability to clone a source database to a point in time.

What is the lowest log frequency in minutes that can be configured in the Era IJI for log catchup operation?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The log frequency in the Era IJI for log catchup operation can be configured to as low as 5 minutes. This allows the system to capture changes to the database at a high frequency, enabling more precise point-in-time recovery options. However, it's important to note that a higher frequency of log catchup operations can lead to increased system load. Therefore, the optimal frequency may

vary depending on the specific requirements and capabilities of your system^{1,2}. Please refer to the Nutanix Database Automation (NCP-DB) Learning documents for more detailed information.

NEW QUESTION # 250

A database administrator wants to define initialization variables for different types of database engines and workloads, like OLTP and DW.

What type of profile would be used?

- A. Software Profile Version
- **B. Database Parameters**
- C. Compute
- D. Network

Answer: B

Explanation:

The database parameters profile is used to define the initialization variables for different types of database engines and workloads, such as OLTP and DW. The database parameters profile allows the database administrator to customize the configuration settings for each database engine, such as Oracle, SQL Server, PostgreSQL, and MySQL. The database parameters profile can also be applied to different database operations, such as provisioning, cloning, and patching. The database parameters profile helps to optimize the performance and functionality of the databases according to the specific requirements and best practices of each database engine and workload.

The software profile version is used to define the software version and edition for each database engine, such as Oracle 19c Enterprise Edition or SQL Server 2019 Standard Edition. The software profile version is required for provisioning new databases and patching existing databases. The software profile version helps to ensure the compatibility and compliance of the databases with the supported software versions and editions.

The network profile is used to define the network configuration and security settings for the database server VMs and the databases, such as the IP address, subnet mask, gateway, DNS, firewall rules, and SSL certificates. The network profile is required for registering new database server VMs and provisioning new databases. The network profile helps to ensure the connectivity and protection of the database server VMs and the databases within the network environment.

The compute profile is used to define the compute resources and storage policies for the database server VMs and the databases, such as the CPU, memory, disk size, disk type, compression, deduplication, and replication factor. The compute profile is required for provisioning new databases and cloning existing databases. The compute profile helps to ensure the availability and efficiency of the database server VMs and the databases within the Nutanix cluster.

NEW QUESTION # 251

An administrator is attempting to enable high availability (HA) for NDB across three Nutanix clusters located in separate data centers. If the network latency between two clusters exceeds 25ms RTT, what impact might this have on the NDB HA setup?

- A. The clusters will not synchronize.
- **B. HA cannot be enabled due to the latency.**
- C. There will be no impact on HA functionality.
- D. HA will operate with increased delay.

Answer: B

Explanation:

NDB supports high availability (HA) across multiple Nutanix clusters, including those in separate data centers, by replicating data and ensuring failover capabilities. However, NDB imposes strict network latency requirements for HA. The official documentation specifies that the round-trip time (RTT) latency between clusters should not exceed 25ms for HA to function effectively. If the latency between two clusters exceeds this threshold (e.g., due to geographic distance or network issues), HA cannot be enabled, as the synchronization and failover mechanisms rely on low-latency communication to maintain consistency and performance.

Impact of other options:

* A. HA will operate with increased delay: While latency might cause delays, exceeding 25ms RTT prevents HA setup entirely, not

just delays its operation.

* C. The clusters will not synchronize: Synchronization issues may occur as a symptom, but the primary impact is HA enablement failure.

* D. There will be no impact on HA functionality: This is incorrect, as latency beyond 25ms RTT violates HA prerequisites.

Thus, the verified answer is B, reflecting NDB's latency constraints for HA across clusters.

NEW QUESTION # 252

Where should an administrator perform an upgrade within the Era management interface?

- A. Alerts
- B. Operations > Current Recent
- C. Profiles Software
- D. Administration > Maintenance

Answer: D

Explanation:

In the Nutanix Era management interface, an administrator should perform an upgrade under the Administration > Maintenance section. As part of the upgrade process, the Era server is upgraded first, followed by all the Era cluster agents and database server agents in parallel. The Dashboard displays the current version and an option to upgrade the Era server to a latest version when a new version is available for upgrade. This ensures that the Nutanix Era environment is always up-to-date with the latest features and security updates.

NEW QUESTION # 253

Refer to the exhibit.

The screenshot shows the 'Provision an Oracle Single Instance Database' form. The 'ASM Driver' dropdown menu is open, showing three options: 'None', 'None' (selected), and 'ASMFD'. The 'None' option is checked. The 'ASM Driver' dropdown is located at the bottom right of the form. The 'ASM Driver' dropdown is currently open, showing three options: 'None', 'None' (with a checkmark), and 'ASMFD'. The 'None' option is selected.

A request is received to provision a new Oracle SIHA DB & VM to test ASMLIB on OEL79 and Oracle 19c.

When walking through the provisioning workflow, only ASMFD is available in the ASM Driver drop down.

What is necessary to provision the requested SIHA DB and DB VM with ASMLIB?

- A. Install ASMLIB on the database server.
- B. Update the NDB driver config to enable ASMLIB for Oracle.
- C. Install ASMLIB on the NDB server.
- **D. Update the software profile to include the ASMLIB driver.**

Answer: D

Explanation:

In the context of Nutanix Database Automation (NCP-DB), when provisioning a new Oracle SIHA DB & VM, if only ASMFD is available in the ASM Driver drop-down, it indicates that ASMLIB is not included in the current software profile. To provision the requested SIHA DB and DB VM with ASMLIB, it's essential to update the software profile to include the ASMLIB driver. This action will enable ASMLIB as an option in the ASM Driver drop-down during the provisioning workflow.
