

NCP-DB Test Free, Guide NCP-DB Torrent

BONUS!!! Download part of PDFVCE NCP-DB dumps for free: <https://drive.google.com/open?id=1JN2sg-4r-gHsflFbLLQ7z8Tk8h6TzDdW>

Our NCP-DB study tool boost three versions for you to choose and they include PDF version, PC version and APP online version. Each version is suitable for different situation and equipment and you can choose the most convenient method to learn our NCP-DB test torrent. For example, APP online version is printable and boosts instant access to download. You can study the NCP-DB Guide Torrent at any time and any place. The PC version of NCP-DB study tool can stimulate the real exam's scenarios. We provide 365-days free update and free demo available.

Nutanix NCP-DB Exam Syllabus Topics:

Topic	Details
Topic 1	• Monitor Alerts and Storage Usage Within an NDB Implementation: It is all about monitoring alerts and management of storage usage.
Topic 2	• Deploy and Configure an NDB Solution: This topic discusses how to deploy, configure, and NDB Instance.
Topic 3	• Protect NDB-managed Databases Using Time Machine: SLA retention policies, source databases, clones, protection of databases, and Data Access Management (DAM) policies are discussed in this topic.

Perfect NCP-DB Test Free for Real Exam

It is necessary to strictly plan the reasonable allocation of NCP-DB test time in advance. Many students did not pay attention to the strict control of time during normal practice, which led to panic during the process of examination, and even some of them are not able to finish all the questions. If you purchased NCP-DB learning dumps, each of your mock exams is timed automatically by the

system. NCP-DB learning dumps provide you with an exam environment that is exactly the same as the actual exam. It forces you to learn how to allocate exam time so that the best level can be achieved in the examination room.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q231-Q236):

NEW QUESTION # 231

How long is the default continuous recovery for the Gold SLA in Era Time Machine?

- A. 60 days
- B. 90 days
- C. 15 days
- **D. 30 days**

Answer: D

Explanation:

The default continuous recovery for the Gold SLA in Era Time Machine is 30 days¹. This means that the system keeps a continuous recovery point for the last 30 days, allowing you to restore your database to any point within this period¹.

NEW QUESTION # 232

Which NDB feature collects logs and snapshots from databases?

- A. Database Restore
- B. SLA
- C. One-click Patching
- **D. Time Machine**

Answer: D

Explanation:

The correct answer is B because the Time Machine feature of NDB collects logs and snapshots from databases and stores them in a distributed file system. The Time Machine enables the administrator to protect, clone, and restore databases using the SLA policies and the NDB UI or API. The Time Machine also manages the replication of database snapshots in an NDB multicluster environment. The other options are not correct because they describe different features or functions of NDB. Option A is not correct because Database Restore is an operation that uses the Time Machine to restore a source database or a clone to a previous point in time. Option C is not correct because SLA is a policy that defines the frequency and retention of database snapshots and logs. Option D is not correct because One-click Patching is a feature that allows the administrator to test, publish, and apply database patches using the NDB UI or API. NEW QUESTION # 233

A database administrator is tasked with creating a new clone of a running SQL database. During the clone process, there are no authorized servers available.

What should the administrator do next?

- A. Register or provision a new database VVI
- B. Register or provision a new authorized server VVI.
- C. Click the Skip icon and choose to authorize later.
- **D. Click the Action icon to authorize one or more database server VMs.**

Answer: D

Explanation:

In the Nutanix Database Automation (NCP-DB) process, when a database administrator is tasked with creating a new clone of a running SQL database and there are no authorized servers available, the administrator should click the Action icon to authorize one or more database server VMs¹. This is because the Nutanix Database Service (NDB) requires authorized servers to perform operations such as cloning¹. The authorization process allows the NDB to manage and perform operations on the database server

VMs1.

NEW QUESTION # 234

Before registering a SQL Server VM with NDB, an administrator must first verify what is enabled?

- A. Remote Management (WinRM)
- B. Secure Shell (SSH)
- C. Remote Desktop (RDP)
- D. Windows PowerShell

Answer: A

Explanation:

Before registering a SQL Server VM with Nutanix Database Service (NDB), the administrator must ensure that the VM is configured to allow NDB to communicate with and manage it. For SQL Server VMs running on Windows, NDB relies on Windows Remote Management (WinRM) to facilitate remote administration, discovery, and management tasks. WinRM is a Microsoft protocol that enables secure communication between the NDB control plane and the Windows-based database server VM. It must be enabled and properly configured (e.g., with HTTP or HTTPS listeners and appropriate firewall rules) to allow NDB to register the VM and perform operations like provisioning, patching, or cloning.

* Option A (Secure Shell - SSH) is incorrect because SSH is a protocol primarily used for Linux-based systems, not Windows-based SQL Server VMs. NDB uses WinRM for Windows environments.

* Option B (Remote Management - WinRM) is correct as it aligns with NDB's requirements for managing Windows VMs hosting SQL Server instances.

* Option C (Remote Desktop - RDP) is incorrect because RDP is a protocol for interactive desktop access, not for the automated management and communication required by NDB.

* Option D (Windows PowerShell) is incorrect as a standalone answer. While PowerShell can leverage WinRM for remote execution, NDB specifically requires WinRM to be enabled as the underlying service, not just PowerShell itself.

To verify WinRM is enabled, the administrator can run `winrm quickconfig` on the SQL Server VM or check the service status and firewall settings. NDB documentation emphasizes this prerequisite to ensure successful registration and management of SQL Server VMs.

NEW QUESTION # 235

When registering a new Nutanix Cluster with Era, what component is installed on the target Nutanix cluster via the Register Nutanix Cluster workflow?

- A. Era Agent
- B. Era Server
- C. API Server
- D. Repository Server

Answer: A

Explanation:

When registering a new Nutanix Cluster with Era, the Era Agent is installed on the target Nutanix cluster via the Register Nutanix Cluster workflow1. This agent is crucial for the functioning of the Nutanix Database Service (NDB) as it helps in managing and optimizing database workloads2. It also enables the application of procedural concepts to add Nutanix clusters to NDB2.

NEW QUESTION # 236

.....

Not only our NCP-DB study guide has the advantage of high-quality, but also has reasonable prices that are accessible for every

one of you. So it is incumbent upon us to support you. On the other side, we know the consumers are vulnerable for many exam candidates are susceptible to ads that boost about NCP-DB skills their practice with low quality which may confuse exam candidates like you, so we are trying hard to promote our high quality NCP-DB study guide to more people.
