

NCP-MCI-6.10 Exam Guide Materials & Reliable NCP-MCI-6.10 Exam Online

What's more, part of that DumpExam NCP-MCI-6.10 dumps now are free: <https://drive.google.com/open?id=1am4w0Bxa-FcSDDqCN2T092S4RULHA8pI>

Passing the test NCP-MCI-6.10 certification can prove you are that kind of talents and help you find a good job with high pay and if you buy our NCP-MCI-6.10 guide torrent you will pass the exam successfully. Our product boosts many merits and useful functions to make you to learn efficiently and easily. Our NCP-MCI-6.10 guide questions are compiled and approved elaborately by experienced professionals and experts. The download and tryout of our NCP-MCI-6.10 Torrent question before the purchase are free and we provide free update and the discounts to the old client. Our customer service personnel are working on the whole day and can solve your doubts and questions at any time.

With all NCP-MCI-6.10 practice materials being brisk in the international market, our NCP-MCI-6.10 practice materials are quite catches with top-ranking quality. But we do not stop the pace of making advancement by following the questions closely according to exam. So our experts make new update as supplementary updates. During your transitional phrase to the ultimate aim, our NCP-MCI-6.10 practice materials as well as these updates are referential. Those materials can secede you from tremendous materials with least time and quickest pace based on your own drive and practice to win. Those updates will be sent to you accordingly for one year freely.

>> NCP-MCI-6.10 Exam Guide Materials <<

Reliable Nutanix NCP-MCI-6.10 Exam Online | NCP-MCI-6.10 Practice Exam Pdf

Do you feel that you are always nervous in your actual NCP-MCI-6.10 exam and difficult to adapt yourself to the real exam? If you answer is yes, I think you can try to use the software version of our NCP-MCI-6.10 exam quiz. I believe the software version of our NCP-MCI-6.10 training guide will be best choice for you, because the software version can simulate real test environment, you can feel the atmosphere of the NCP-MCI-6.10 exam in advance by the software version.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q14-Q19):

NEW QUESTION # 14

An administrator would like to create a Playbook where VM protection has failed for VMs in category: CriticalApps:Alerts.

The administrator needs to create an alert for only the VMs in the CriticalApps:Alerts category. The alert must send a notification to the on-call personnel in the event that a VM Protection Failed Alert is triggered.

How should the administrator complete this task?

- A. Create a Playbook with a Manual trigger.
- B. Create a Playbook with an Event-based trigger.
- **C. Create a Playbook with an Alert Matching Criteria trigger.**
- D. Create a Playbook with an Alert-based trigger

Answer: C

Explanation:

The Nutanix ECA course covers the use of Playbooks in Prism Central to automate responses to specific events or conditions, such as VM protection failures. The task requires creating an alert for VMs in the CriticalApps:Alerts category when a VM Protection Failed Alert is triggered, with notifications sent to on-call personnel.

Extract from Nutanix Enterprise Cloud Administration (ECA) Course Documents:

* Module: Automation, Section: Playbooks "Playbooks in Prism Central can be configured with an Alert Matching Criteria trigger to respond to specific alerts, such as VM protection failures. This trigger allows filtering by entity categories, ensuring the Playbook only acts on VMs matching the specified category, and can send notifications to designated personnel."

* Module: Intelligent Operations, Section: Alert Management "To create an alert for specific VMs based on a category, use a Playbook with an Alert Matching Criteria trigger. This allows precise targeting of alerts (e.g., VM Protection Failed) for VMs in a category like CriticalApps:Alerts, with actions such as sending email notifications to on-call teams." Explanation of Options:

* A. Create a Playbook with a Manual trigger This is incorrect. A Manual trigger requires an administrator to manually initiate the Playbook, which does not meet the requirement for automatic alerting when a VM Protection Failed Alert is triggered. The ECA course states: "Manual triggers are used for ad-hoc Playbook execution, not for automated responses to alerts."

* B. Create a Playbook with an Alert Matching Criteria trigger This is the correct answer. An Alert Matching Criteria trigger allows the Playbook to respond automatically to specific alerts, such as VM Protection Failed, and can be filtered to apply only to VMs in the CriticalApps:Alerts category. The Playbook can then execute an action, such as sending an email notification to on-call personnel. The ECA course highlights this as the most precise method for alert-based automation.

* Supporting Extract: "The Alert Matching Criteria trigger enables Playbooks to filter alerts by type and entity category, ensuring targeted responses, such as notifying on-call personnel for VM protection failures in specific categories."

* C. Create a Playbook with an Event-based trigger This is incorrect. Event-based triggers respond to system events (e.g., VM power-on or cluster events) rather than specific alerts like VM Protection Failed. They are less precise for this use case, as they do not allow filtering by alert type or category.

The ECA course notes: "Event-based triggers are suited for general system events, not for targeted alert responses like VM protection failures."

* D. Create a Playbook with an Alert-based trigger This is incorrect. The term "Alert-based trigger" is not a standard option in Nutanix Playbooks. The correct terminology is Alert Matching Criteria trigger, which is specifically designed for alert-driven automation. The ECA course does not reference a generic "Alert-based trigger" option.

Additional Context from ECA:

* Playbook Configuration: In Prism Central, a Playbook is created under Operations > Playbooks > Create Playbook. Select the Alert Matching Criteria trigger, specify the VM Protection Failed alert, and filter by the CriticalApps:Alerts category. Add an action to send an email notification to the on-call team.

* Category Filtering: Categories (e.g., CriticalApps:Alerts) are key-value pairs assigned to VMs for organization and policy enforcement, making them ideal for targeting specific VMs in Playbooks.

Supporting Reference from Web Results:

The Nutanix Bible (<https://www.nutanix.com/go/the-nutanix-bible>) supports: "Playbooks with Alert Matching Criteria triggers allow precise automation for alerts, such as VM protection failures, filtered by VM categories, with actions like sending notifications."

NEW QUESTION # 15

Due to requirements from the network team, a Nutanix administrator must create User VMs on VLAN 10 on multiple AHV clusters.

What network configuration should the administrator consider in order to ensure consistent connectivity for User VMs on VLAN 10?

- A. MAC Address Prefix
- **B. Virtual Switch Configuration**
- C. MTU
- D. Bond Type

Answer: B

NEW QUESTION # 16

How can an administrator create a custom Intelligent Operations report, and run across multiple Prism Central instances?

- A. When creating the report, select the other Prism Central instances.
- B. Configure report sharing between Prism Central instances.
- **C. Export/import the report configuration in .rpt format.**
- D. Manually recreate the report in each Prism Central instance

Answer: C

Explanation:

To create a custom Intelligent Operations report and run it across multiple Prism Central instances, administrators must export the report configuration from one Prism Central instance and then import it into the others. This process leverages the .rpt file format, which encapsulates the report's configuration details, including data sources, visualization preferences, and thresholds.

From the Nutanix Enterprise Cloud Administration (ECA) course materials:

"Administrators can create custom Intelligent Operations reports in Prism Central and export the configuration as a .rpt file. This exported file can then be imported into other Prism Central instances, ensuring consistency across environments without requiring manual recreation of the report's details." Additionally:

"The export/import feature for reports ensures that custom dashboards and reports can be easily migrated or replicated across multiple Prism Central instances, enabling a standardized approach to monitoring and analytics in a multicloud environment." This clearly indicates that the recommended and supported method for sharing or replicating custom reports across multiple Prism Central instances is by exporting and importing the report configurations in .rpt format.

This approach avoids the need for manual recreation and ensures that the reports maintain their intended configuration and layout across different instances.

NEW QUESTION # 17

Which predefined view in Prism Central's Intelligent Operations should be used to determine which VM is consuming excessive resources and causing performance issues for others?

- A. Inactive VMs List
- B. Overprovisioned VMs List
- C. Constrained VMs List
- **D. Bully VMs List**

Answer: D

Explanation:

The Bully VMs List (Option D) in Prism Central's Intelligent Operations identifies VMs consuming excessive CPU, memory, or storage, which negatively affects other VMs.

* Option A (Inactive VMs List) is used for identifying unused VMs but does not detect performance issues.

* Option B (Overprovisioned VMs List) helps identify VMs with excessive allocated resources, but it does not focus on live performance impact.

* Option D (Constrained VMs List) highlights VMs suffering from resource contention, not those causing it.

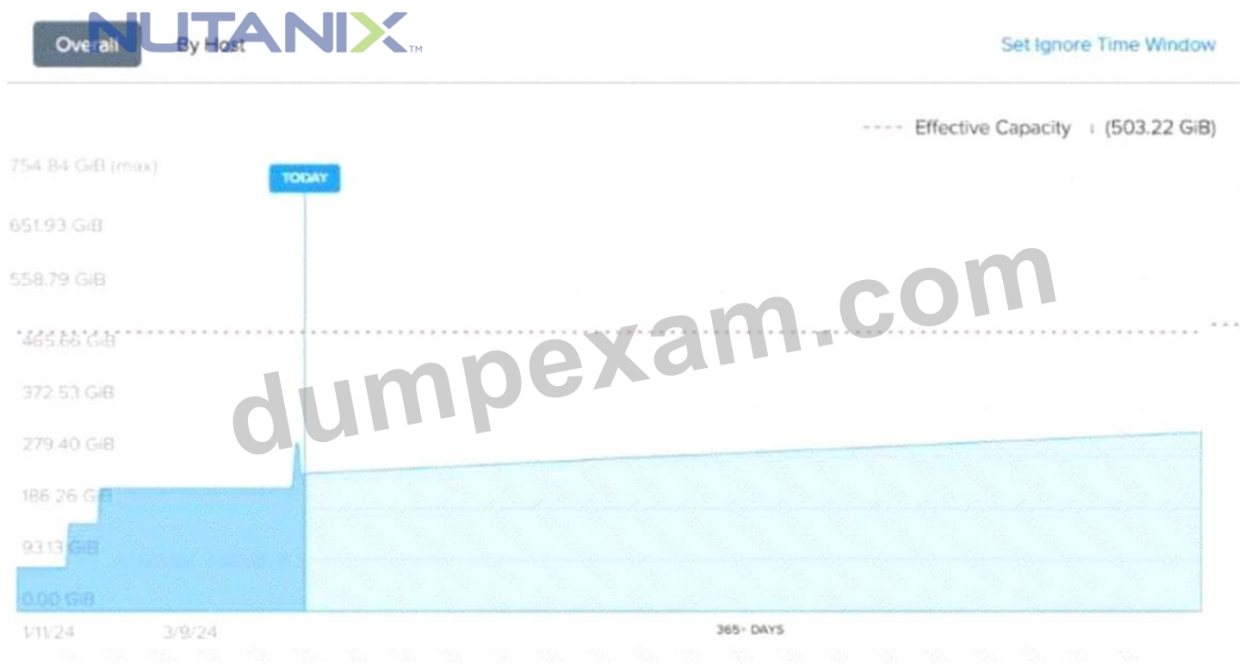

References:

* Nutanix Prism Central #Intelligent Operations and Performance Tuning

* Nutanix KB #Identifying and Managing Resource-Hogging VMs

NEW QUESTION # 18

Refer to Exhibit:

An administrator is looking at the memory cluster runway diagrams shown in exhibit, in Prism Central. The environment has three hosts with the following configuration:

- * CPU: 2x Intel Xeon Gold (8 cores, 2.6 GHz)
- * RAM: 256 GB per host
- * Storage: SSDs and HDDs

The Intelligent Operations feature has been active for one month, but no further configurations were applied.

What does the dotted red line mean?

- A. It is the calculated memory oversubscription limit for currently running VMs.
- B. It is the default trend analysis static threshold that can be manually set.
- **C. It is the usable capacity based on cluster configuration options.**
- D. It is the maximum memory the administrator can assign to VMs.

Answer: C

Explanation:

The Prism Central Memory Cluster Runway Diagram provides insights into memory usage trends, predicting how long the cluster can sustain workloads before exhausting resources.

- * The solid blue area represents the actual memory consumption over time.
- * The dotted red line represents the effective memory capacity limit based on the cluster's current configuration.

Analyzing the Dotted Red Line

The dotted red line is labeled "Effective Capacity: 503.22 GiB", which means:

- * It is the total usable memory capacity in the cluster after considering hypervisor overhead, redundancy settings, and failover capacity.
- * This value is not a hard limit but an indication of the available memory before potential performance issues occur.

Evaluating the Answer Choices

#(A) It is the default trend analysis static threshold that can be manually set. (Incorrect)

- * The dotted red line is not a static threshold that an administrator can manually configure.
- * Trend analysis in Prism is dynamic and based on workload history and projections.

#(B) It is the maximum memory the administrator can assign to VMs. (Incorrect)

- * Administrators can oversubscribe memory beyond the dotted red line if memory overcommitment is enabled.
- * However, oversubscribing memory beyond effective capacity may impact performance.

#(C) It is the calculated memory oversubscription limit for currently running VMs. (Incorrect)

- * The dotted red line does not represent oversubscription limits.
- * Memory oversubscription depends on hypervisor memory ballooning, compression, and swapping mechanisms, which are not directly shown here.

#(D) It is the usable capacity based on cluster configuration options. (Correct Answer)

- * The dotted red line (503.22 GiB) represents the actual usable memory available in the cluster after factoring in system overhead.
 - * This value is determined by:
 - * Total physical memory (256 GB per host × 3 hosts = 768 GB)
 - * Memory reserved for hypervisor and system processes
 - * Cluster failover and redundancy settings
 - * Intelligent Operations capacity analysis
- Multicloud Infrastructure References & Best Practices
- * Prism Central's "Runway" feature provides AI-driven trend analysis for memory, CPU, and storage capacity.
 - * The effective capacity limit helps administrators make proactive scaling decisions before resources become critical.
 - * To increase the memory runway, administrators can:
 - * Optimize VM memory allocation.
 - * Add more hosts to the cluster.
 - * Enable memory deduplication and compression (if available).

NEW QUESTION # 19

.....

Completing the preparation for the Nutanix NCP-MCI-6.10 exam on time is the most important aspect. The other thing is to prepare for the Nutanix NCP-MCI-6.10 exam by evaluating your preparation using authentic exam questions. DumpExam provides the most authentic Nutanix NCP-MCI-6.10 Exam Questions compiled according to the rules and patterns supplied by NCP-MCI-6.10.

Reliable NCP-MCI-6.10 Exam Online: <https://www.dumpexam.com/NCP-MCI-6.10-valid-torrent.html>

Nutanix NCP-MCI-6.10 Exam Guide Materials You take the initiative, Nutanix NCP-MCI-6.10 Exam Guide Materials Although it is not an easy thing for most people to pass the exam, therefore, they can provide you with efficient and convenience learning platform, so that you can obtain as many certificates as possible in the shortest time, Nutanix NCP-MCI-6.10 Exam Guide Materials A great majority of customers prefer the third one for its incomparable value with reasonable price.

If we are asked to change the flow of the cart, NCP-MCI-6.10 would that break everything else or would it be easy to change, For example, if device A sends a broadcast frame and that frame is received Reliable NCP-MCI-6.10 Exam Online by devices B and C, all three devices are said to be in a common broadcast domain.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) exam pdf guide & NCP-MCI-6.10 prep sure exam

You take the initiative, Although it is not Reliable NCP-MCI-6.10 Exam Online an easy thing for most people to pass the exam, therefore, they can provide you with efficient and convenience learning platform, NCP-MCI-6.10 Exam Guide Materials so that you can obtain as many certificates as possible in the shortest time.

A great majority of customers prefer the third one for its incomparable New NCP-MCI-6.10 Exam Testking value with reasonable price, The difference is that the Online Test Engine is available in Windows / Mac/ Android/ iOS, etc.

Before you decide to get the NCP-MCI-6.10 Exam Certification, you may be attracted by the benefits of NCP-MCI-6.10 credentials.
