

NCP-MCI-6.10 Valid Exam Answers, Valid Test NCP-MCI-6.10 Tutorial

P.S. Free & New NCP-MCI-6.10 dumps are available on Google Drive shared by NewPassLeader:
<https://drive.google.com/open?id=13TxFlSv7bC8oaeyDD2uZZdy-uMTwwzYp>

First and foremost, in order to cater to the different needs of people from different countries in the international market, we have prepared three kinds of versions of our NCP-MCI-6.10 learning questions in this website. Second, we can assure you that you will get the latest version of our NCP-MCI-6.10 Training Materials for free from our company in the whole year after payment on NCP-MCI-6.10 practice materials. Last but not least, we will provide the most considerate after sale service on our NCP-MCI-6.10 study guide for our customers in twenty four hours a day seven days a week.

Nutanix NCP-MCI-6.10 Exam Syllabus Topics:

Topic	Details
Topic 1	• Configure Disaster Recovery and Data Protection within a Nutanix Multicloud Environment: This section of the exam measures the skills of Disaster Recovery Specialists and Cloud Engineers and covers configuring protection policies and domains for data security and recovery. Candidates need to identify the right entities for protection, schedule backups, define retention policies, and set up replication to remote sites. Recovery plans must be configured and executed with proper scripting, network mapping, and failover strategies. Metro replication requires understanding failover methodologies, comparing solutions on different hypervisors, and preventing split-brain scenarios. Effective disaster recovery planning ensures minimal downtime and data integrity across environments.
Topic 2	• Manage VMs within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Administrators and Virtualization Engineers and covers managing virtual machines (VMs) within a Nutanix multicloud environment. It includes creating and updating VMs by determining hardware requirements, boot modes, sizing, and configuration based on application needs. Candidates must understand how to deploy VMs using templates, snapshots, and image configurations, ensuring the correct formats for importing and exporting VMs. Migration processes require knowledge of prerequisites, storage, network settings, and software compatibility. Additionally, configuring VM categories and attributes is essential for proper organization and management within the environment, ensuring alignment with labels, storage policies, and security settings.
Topic 3	• Troubleshoot a Nutanix Multicloud Environment: This section of the exam measures the skills of Technical Support Engineers and IT Operations Specialists and covers diagnosing and resolving common issues within a Nutanix multi-cloud environment. Troubleshooting protection policies and recovery plans requires identifying network mapping failures, vNIC issues, script execution problems, and connectivity failures. Metro replication troubleshooting involves addressing naming conventions, network limitations, and replication states. Security issues in AOS and Prism Central must be resolved by managing CVM communications, security warnings, and log analysis. LCM operations require diagnosing failures in inventory updates and version upgrades. Performance troubleshooting involves analyzing logs, reading performance charts, and adjusting VM configurations to meet performance needs.

Topic 4	• Manage Clusters within a Nutanix Multicloud Environment: This section of the exam measures the skills of Infrastructure Engineers and Systems Administrators and covers the administration of Nutanix clusters. Storage management includes creating, reading, updating, and deleting storage containers and volume groups. Configuring AOS and Prism Central settings involves authentication, SSL certificate management, IAM role-based access control, and configuring network segmentation. Network administration procedures focus on creating VLAN-backed subnets, virtual switches, and load-balancing policies while monitoring NIC usage. Lifecycle management includes performing hardware and software updates and maintaining firmware. Hardware maintenance involves adding or removing nodes and physical disks while ensuring proper upgrades and replacements. Intelligent operations require configuring capacity policies, discovering application relationships, and simulating scenarios to optimize performance.
Topic 5	• Conduct Custom Monitoring within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Analysts and Systems Engineers and covers custom monitoring for optimized performance management. Candidates must analyze performance charts, set retention policies, create custom service level agreements (SLAs), and manage storage based on policies. Creating reports involves identifying the required type, selecting generation frequency, determining retention properties, and customizing report formats for different monitoring needs. Effective monitoring ensures better resource utilization, system efficiency, and proactive issue resolution within the multi-cloud environment.

Nutanix NCP-MCI-6.10 Desktop Practice Exam Questions Software

Your personal experience will defeat all advertisements that we post before. When you enter our website, you can download the free demo of NCP-MCI-6.10 exam software. We believe you will like our dumps that have helped more candidates Pass NCP-MCI-6.10 Exam after you have tried it. Using our exam dump, you can easily become IT elite with NCP-MCI-6.10 exam certification.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q105-Q110):

NEW QUESTION # 105

An administrator is preparing for a firmware upgrade on a host and wants to manually migrate VMs before executing the LCM upgrade. However, one VM is unable to migrate while others migrate successfully. Which action would fix the issue?

- A. Configure backplane port groups that are assigned to the CVM.
- **B. Enable Acropolis Dynamic Scheduling (ADS) at the cluster level.**
- C. Update Link Layer Discovery Protocol (LLDP).
- D. Disable Agent VM within the VM configuration options.

Answer: B

NEW QUESTION # 106

A consultant is configuring syslog monitoring and wants to receive CRITICAL logs from the Audit module. Which severity level setting should be configured to get the desired output?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Syslog severity levels follow a standard numerical system, where lower numbers indicate higher severity.

* Option B (Severity Level 2) is correct:

* Level 2 = CRITICAL# Used for serious conditions requiring immediate attention.

* Audit logs often generate Critical logs related to security, access violations, or major failures.

A screenshot of a computer Description automatically generated

Syslog Severity Level	Meaning
0	Emergency (System is unusable)
1	Alert (Action must be taken immediately)
2	Critical (Severe conditions, failures, or security issues)
3	Error (General errors, software failures)
4	Warning (Potential issues)
5	Notice (Normal but significant events)
6	Informational (General system messages)
7	Debug (Detailed debugging information)

* Options A (0), C (5), and D (7) are incorrect:

* 0 = Emergency (Too severe, only used for full system failures).

* 5 = Notice (Not critical, used for general system events).

* 7 = Debug (Not relevant for critical logs).

NEW QUESTION # 107

An administrator is trying to configure Metro Availability between Nutanix ESXi-based clusters. However, the Compatible Remote Sites screen does not list all required storage containers.

Which two reasons could be a cause for this issue? (Choose two.)

- A. Source and destination hardware are from different vendors.
- B. The remote site storage container has compression enabled.
- C. The destination storage container is not empty.
- D. Both storage containers must have the same name.

Answer: C,D

Explanation:

For Metro Availability to work properly, the storage containers at both the primary and secondary sites must meet certain requirements:

* The storage containers must have the same name (Option D). This ensures that replication and failover work seamlessly. If the names do not match, the storage containers will not be listed as compatible.

* The destination storage container must be empty (Option C). Metro Availability requires a clean storage container at the secondary site to receive data. If the container already contains data, it cannot be used.

* Option A is incorrect: Different vendor hardware does not affect Metro Availability compatibility.

* Option B is incorrect: Compression does not affect Metro Availability compatibility. However, it is recommended to keep compression settings aligned between sites.

NEW QUESTION # 108

An administrator is experiencing storage performance issues on a Windows Server 2019 VM with the following configuration:

* vCPU: 1

- * VRAM: 8 GB
- * vSCSI: VirtIO SCSI Controller
- * vDisk: 2 (100 GB, 250 GB)
- * vNIC: VirtIO Fast Ethernet

The AHV cluster is healthy, and other Windows VMs are performing well.

Which configuration change should be reviewed to enhance VM performance?

- A. Increase Controller VM (CVM) resources.
- B. Enable Balance-TCP on bridge (br0).
- **C. Increase the VM's number of vCPUs.**
- D. Add a second virtual storage controller (vSCSI).

Answer: C

Explanation:

A single vCPU is likely causing a bottleneck, limiting the VM's ability to process I/O requests efficiently.

* Option D (Increase the VM's number of vCPUs) is correct:

* Windows requires sufficient CPU resources to handle disk and network operations.

* Adding more vCPUs allows the VM to process more I/O operations simultaneously, improving performance.

* Option A is incorrect:

* Additional vSCSI controllers are only useful for very high disk I/O workloads.

* Option B is incorrect:

* Balance-TCP applies to network traffic, not storage performance.

* Option C is incorrect:

* CVM resources do not directly affect individual VM performance.

NEW QUESTION # 109

An administrator is configuring a replication schedule on multiple remote locations deployed using a single-node cluster. The goal is to achieve the lowest possible RPO (Recovery Point Objective).

How should the administrator configure the replication schedule?

- A. Configure NearSync replication.
- **B. Configure Async replication.**
- C. Configure a schedule for 16 minutes up to 59 minutes.
- D. Configure a schedule for 1 minute up to 15 minutes.

Answer: B

NEW QUESTION # 110

.....

Preparation for the professional Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam is no more difficult because experts have introduced the preparatory products. With NewPassLeader products, you can pass the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam on the first attempt. If you want a promotion or leave your current job, you should consider achieving a professional certification like Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam.
