

NCP-US-6.5 PDF VCE - Professional Actual NCP-US-6.5 Tests and Latest Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Training Courses

What's more, part of that PDFVCE NCP-US-6.5 dumps now are free: <https://drive.google.com/open?id=1Z4E23FAikeb1KVCEHaPPS2YQYZFQMVn>

The software version of the NCP-US-6.5 study materials is very practical. This version has helped a lot of customers pass their exam successfully in a short time. The most important function of the software version is to help all customers simulate the real examination environment. If you choose the software version of the NCP-US-6.5 Study Materials from our company as your study tool, you can have the right to feel the real examination environment. In addition, the software version is not limited to the number of the computer.

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	• Given a scenario, configure shares, buckets, and or Volume Groups • Troubleshoot a failed upgrade for Files • Objects
Topic 2	• Analyze and Monitor Nutanix Unified Storage • Describe the use of Data Lens for data security
Topic 3	• Configure Nutanix Objects • Describe how to monitor performance and usage
Topic 4	• Utilize File Analytics for data security • Troubleshoot Nutanix Unified Storage • Configure Nutanix Volumes

Topic 5	• Identify the steps to deploy Nutanix Files • Given a scenario, determine product and sizing parameters
Topic 6	• Configure and Utilize Nutanix Unified Storage • Identify the steps to deploy Nutanix Objects
Topic 7	• Troubleshoot issues related to Nutanix Objects • Troubleshoot issues related to Nutanix Volumes
Topic 8	• Configure Nutanix Files with advanced features • Determine the appropriate method to ensure data availability • recoverability
Topic 9	• Deploy and Upgrade Nutanix Unified Storage • Perform upgrades • maintenance for Files • Objects implementations

Nutanix NCP-US-6.5 Test Preparation Is Not Tough Anymore!

Obtaining the NCP-US-6.5 certificate will make your colleagues and supervisors stand out for you, because it represents NCP-US-6.5 your professional skills. At the same time, it will also give you more opportunities for promotion and job-hopping. The NCP-US-6.5 latest exam dumps have different classifications for different qualification examinations, which can enable students to choose their own learning mode for themselves according to the actual needs of users. The NCP-US-6.5 Exam Question offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q27-Q32):

NEW QUESTION # 27

Within the Prism Central Entity > Services > Objects menu option, what is the correct task order for creating an object storage?

Answer:

Explanation:

Explanation:

The correct task order for creating an object store is:

- * Select ObjectStore Service and click Enable
 - * Click Create Object Store to start creating the first Object store
 - * Click Download Creation Checklist to download the list of prerequisites for deploying an Object store
- The first step is to enable the ObjectStore Service, which is a service that allows users to create and manage object storage clusters on a Nutanix cluster. The second step is to create an Object store, which is an object storage cluster that provides S3-compatible access to buckets and objects for various applications and users. The third step is to download the Creation Checklist, which is a document that lists the prerequisites and configurations that are required for deploying an Object store, such as cluster details, network details, storage details, etc. The administrator should review and complete the Creation Checklist before proceeding with the deployment of the Object store.

NEW QUESTION # 28

What are two ways to manage Objects? (Choose two.)

- A. API
- B. CLI
- C. SSH
- D. PC

Answer: A,D

Explanation:

There are two ways to manage Objects: PC (Prism Central) and API (Application Programming Interface). PC is a web-based user interface that allows administrators to create, configure, monitor, and manage Objects clusters, buckets, users, and policies. API is a set of S3-compatible REST APIs that allows applications and users to interact with Objects programmatically. API can be used to perform operations such as creating buckets, uploading objects, listing objects, downloading objects, deleting objects, and so on. NEW QUESTION # 29

An administrator is planning to upgrade all ESXi hypervisors in a cluster hosting Files. When performing one-click hypervisor upgrades, what prerequisite must be performed?

- A. Enable the anti-affinity rules on all FSVMs.
- B. Disable the anti-affinity rules on all FSVMs.
- C. Manually migrate the FSVMs.
- D. Shutdown the FSVMs.

Answer: B

Explanation:

The prerequisite that must be performed before performing one-click hypervisor upgrades is to disable the anti-affinity rules on all FSVMs. Anti-affinity rules are rules that prevent two or more VMs from running on the same host at the same time. Anti-affinity rules can improve the availability and performance of FSVMs by distributing them across different hosts in a cluster. However, anti-affinity rules can interfere with one-click hypervisor upgrades, which require all VMs on a host to be migrated to another host before upgrading the host. Therefore, the administrator must disable the anti-affinity rules on all FSVMs before performing one-click hypervisor upgrades, and re-enable them after the upgrades are completed. NEW QUESTION # 30

How many configurable snapshots are supported for SSR in a file server?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The number of configurable snapshots that are supported for SSR in a file server is 200. SSR (Snapshot-based Replication) is a feature that allows administrators to replicate snapshots of shares or exports from one file server to another file server on a different cluster or site for disaster recovery purposes. SSR can be configured with various parameters, such as replication frequency, replication status, replication mode, etc. SSR supports up to 200 configurable snapshots per share or export in a file server.

NEW QUESTION # 31

An administrator is tasked with creating an Objects store with the following settings:

- * Medium Performance (around 10,000 requests per second)
- * 10 TiB capacity
- * Versioning disabled
- * Hosted on an AHV cluster

immediately after creation, the administrator is asked to change the name of Objects store. Who will the administrator achieve this request?

- **A. Delete and recreate a new Objects store with the updated name**
- B. Enable versioning and then rename the Object store, disable versioning
- C. The Objects store can only be renamed if hosted on ESXI.

Answer: A

Explanation:

The administrator can achieve this request by deleting and recreating a new Objects store with the updated name. Objects is a feature that allows users to create and manage object storage clusters on a Nutanix cluster.

Objects clusters can provide S3-compatible access to buckets and objects for various applications and users.

Objects clusters can be created and configured in Prism Central. However, once an Objects cluster is created, its name cannot be changed or edited. Therefore, the only way to change the name of an Objects cluster is to delete the existing cluster and create a new cluster with the updated name.
