What's more, part of that Real4test NCP-US-6.5 dumps now are free: <https://drive.google.com/open?id=1ZlrbYH8dQQi8qZpRGwhHTu3K3aZcIGY>

Real4test also offers a demo of the Nutanix NCP-US-6.5 exam product which is absolutely free. Up to 1 year of free Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) questions updates are also available if in any case the sections of the Nutanix NCP-US-6.5 Actual Test changes after your purchase. Lastly, we also offer a full refund guarantee according to terms and conditions if you do not get success in the Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 exam after using our NCP-US-6.5 product.

Can you imagine that you only need to review twenty hours to successfully obtain the NCP-US-6.5 certification? Can you imagine that you don't have to stay up late to learn and get your boss's favor? With NCP-US-6.5 study quiz, passing exams is no longer a dream. If you are an office worker, NCP-US-6.5 Preparation questions can help you make better use of the scattered time to review. Just visit our website and try our NCP-US-6.5 exam questions, then you will find what you need.

## US) v6.5 Exam Easily

The pass rate is 98.75% for NCP-US-6.5 exam braindumps, and you can pass your exam in your first attempt if you choose us. Many candidates have recommended our NCP-US-6.5 exam materials to their friends for the high pass rate. In addition, we are pass guarantee and money back guarantee if you fail to pass the exam. NCP-US-6.5 Exam Braindumps cover most of knowledge points for the exam, and you can increase your professional ability in the process of learning. We offer you free update for 365 days for NCP-US-6.5 training materials after payment, and the update version will be sent to your email automatically.

### Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Analyze and Monitor Nutanix Unified Storage</li><li>Describe the use of Data Lens for data security</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Utilize File Analytics for data security</li><li>Troubleshoot Nutanix Unified Storage</li><li>Configure Nutanix Volumes</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Troubleshoot issues related to Nutanix Files</li><li>Explain Data Management processes for Files and Objects</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Troubleshoot issues related to Nutanix Objects</li><li>Troubleshoot issues related to Nutanix Volumes</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Deploy and Upgrade Nutanix Unified Storage</li><li>Perform upgrades</li><li>maintenance for Files</li><li>Objects implementations</li></ul>
Topic 6	<ul style="list-style-type: none"><li>Given a scenario, configure shares, buckets, and or Volume Groups</li><li>Troubleshoot a failed upgrade for Files</li><li>Objects</li></ul>

### Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q76-Q81):

#### NEW QUESTION # 76

What is the most efficient way of enabling users to restore their files without administrator intervention in multiple Files shares?

- A. Add all FSVMs to a Consistency Group within a single asynchronous Protection Domain in PE.
- B. Click Enable next to the name of the share in Manage Recovery Settings from Data Lens.
- C. Click Enable Self Service Restore in the Edit wizard for each share in Shares tab from Files Console.
- D. Assign the same Category to all FSVMs and adding that Category to a single Protection Policy in PC.

**Answer: C**

Explanation:

Nutanix Files allows users to restore their files from the snapshots taken by the protection policy. A protection policy is a set of rules that defines how often snapshots are taken, how long they are retained, and where they are replicated. A protection policy can be applied to one or more file shares. To enable users to restore their files without administrator intervention, the administrator must enable the Self Service Restore option for each share in the Files Console. This option adds a hidden folder named .snapshot in each share, which contains all the snapshots taken by the protection policy. Users can access this folder and browse the snapshots to find and restore their files. The administrator can also configure the permissions and quota for the .snapshot folder. References: Nutanix Files Administration Guide, page 75; Nutanix Files Self-Service Restore Guide Nutanix Files, part of Nutanix Unified Storage (NUS), provides a Self-Service Restore (SSR) feature that allows end users to recover their files without administrator intervention. This feature is particularly useful for SMB shares, enabling users to access previous versions of files or folders directly from their

Windows clients (e.g., via the "Previous Versions" tab in File Explorer).

The most efficient way to enable Self-Service Restore for multiple Files shares is to configure it at the share level within the Files Console. According to the Nutanix Files Administration Guide, the Self-Service Restore option can be enabled for each share individually through the Shares tab in the Files Console. While this requires enabling the setting for each share, it is the most direct and supported method for enabling SSR across multiple shares, as it does not involve external tools like Data Lens or complex configurations like Protection Policies or Consistency Groups.

\* Option A: Correct. Enabling Self-Service Restore in the Edit wizard for each share via the Shares tab in the Files Console is the standard method. It allows users to restore files directly without administrator intervention. While it requires configuring each share individually, it is efficient for a small to moderate number of shares and aligns with Nutanix's recommended approach.

\* Option B: Incorrect. Nutanix Data Lens is a service for data governance, analytics, and ransomware protection, not for managing Self-Service Restore settings. Data Lens focuses on scanning shares for anomalies and providing recovery points, but it does not have a direct option to enable SSR for shares.

\* Option C: Incorrect. Assigning Categories to FSVMs and linking them to a Protection Policy in Prism Central is related to VM or resource protection (e.g., snapshots or replication), not to enabling user-driven file restoration for Files shares.

\* Option D: Incorrect. Consistency Groups and Protection Domains in Prism Element are used for data protection and disaster recovery (e.g., asynchronous replication), not for enabling Self-Service Restore for end users.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"Self-Service Restore allows end users to recover files and folders from SMB shares without administrator intervention. To enable Self-Service Restore, navigate to the Shares tab in the Files Console, select a share, and click Edit. In the Edit wizard, check the 'Enable Self-Service Restore' option. This must be configured for each share individually." Additional Notes:

\* While enabling SSR for each share individually (option A) may seem less efficient for a very large number of shares, Nutanix does not currently provide a bulk configuration option for SSR in the Files Console. Automation via APIs could be an alternative for large-scale deployments, but this is not mentioned in the question's options.

\* The question emphasizes "most efficient," and option A is the most straightforward and officially supported method per the documentation.

:

Nutanix Files Administration Guide, Version 4.0, Section: "Managing Shares - Self-Service Restore" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files Share Management".

## NEW QUESTION # 77

An organization currently has two Objects instances deployed between two sites. Both instances are managed via manage the same Prism Central to simplify management.

The organization has a critical application with all data in a bucket that needs to be replicated to the secondary site for DR purposes. The replication needs to be asynchronous, including all delete the marker versions.

- A. Leverage the Objects Baseline Replication Tool from a Linux VM
- B. Use a protection Domain to replicate the objects Volume Group.
- C. With Object Browser, upload the data at the destination site.
- **D. Create a Bucket replication rule, set the destination Objects instances.**

**Answer: D**

Explanation:

The administrator can achieve this requirement by creating a bucket replication rule and setting the destination Objects instance.

Bucket replication is a feature that allows administrators to replicate data from one bucket to another bucket on a different Objects instance for disaster recovery or data migration purposes.

Bucket replication can be configured with various parameters, such as replication mode, replication frequency, replication status, etc. Bucket replication can also replicate all versions of objects, including delete markers, which are special versions that indicate that an object has been deleted. By creating a bucket replication rule and setting the destination Objects instance, the administrator can replicate data from one Objects instance to another asynchronously, including all delete markers and versions. References: Nutanix Objects User Guide, page 19; Nutanix Objects Solution Guide, page 9 Nutanix Objects, part of Nutanix Unified Storage (NUS), supports replication of buckets between Object Store instances for disaster recovery (DR). The organization has two Objects instances across two sites, managed by the same Prism Central, and needs to replicate a bucket's data asynchronously, including delete marker versions, to the secondary site.

Analysis of Options:

\* Option A (With Object Browser, upload the data at the destination site): Incorrect. The Object Browser is a UI tool in Nutanix Objects for managing buckets and objects, but it is not designed for replication. Manually uploading data to the destination site does not satisfy the requirement for asynchronous replication, nor does it handle delete marker versions automatically.

\* Option B (Leverage the Objects Baseline Replication Tool from a Linux VM): Incorrect. The Objects Baseline Replication Tool is

not a standard feature in Nutanix Objects documentation. While third-party tools or scripts might be used for manual replication, Nutanix provides a native solution for bucket replication, making this option unnecessary and incorrect for satisfying the requirement.

\* Option C (Use a Protection Domain to replicate the Objects Volume Group): Incorrect. Protection Domains are used in Nutanix for protecting VMs and Volume Groups (block storage) via replication, but they do not apply to Nutanix Objects. Objects uses bucket replication rules for DR, not Protection Domains.

\* Option D (Create a Bucket replication rule, set the destination Objects instance): Correct. Nutanix Objects supports bucket replication rules to replicate data between Object Store instances asynchronously. This feature allows the organization to replicate the bucket to the secondary site, including all versions (such as delete marker versions), as required. The replication rule can be configured in Prism Central, specifying the destination Object Store instance, and it supports asynchronous replication for DR purposes.

Why Option D?

Bucket replication in Nutanix Objects is the native mechanism for asynchronous replication between Object Store instances. It supports replicating all versions of objects, including delete marker versions (which indicate deleted objects in a versioned bucket), ensuring that the secondary site has a complete replica of the bucket for DR. Since both Object Store instances are managed by the same Prism Central, the administrator can easily create a replication rule to meet the requirement.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Administration Guide (available on the Nutanix Portal):

"Nutanix Objects supports asynchronous bucket replication for disaster recovery. To replicate a bucket to a secondary site, create a bucket replication rule in Prism Central, specifying the destination Object Store instance. The replication rule can be configured to include all versions, including delete marker versions, ensuring that the secondary site maintains a complete replica of the bucket for DR purposes."

:

Nutanix Objects Administration Guide, Version 4.0, Section: "Bucket Replication for Disaster Recovery" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Replication Features".

## NEW QUESTION # 78

Workload optimization on Files is configured on which entity?

- A. File Server
- B. Share
- C. Volume
- D. Container

**Answer: A**

Explanation:

Workload optimization in Nutanix Files, part of Nutanix Unified Storage (NUS), involves tuning the Files deployment to handle specific workloads efficiently. This was previously discussed in Question 13, where workload optimization was based on FSVM quantity. The question now asks which entity workload optimization is configured on.

Analysis of Options:

\* Option A (Volume): Incorrect. Volumes in Nutanix refer to block storage provided by Nutanix Volumes, not Nutanix Files.

Workload optimization for Files does not involve Volumes, which are a separate entity for iSCSI-based storage.

\* Option B (Share): Incorrect. Shares in Nutanix Files are the individual file shares (e.g., SMB, NFS) accessed by clients. While shares can be tuned (e.g., quotas, permissions), workload optimization in Files is not configured at the share level-it applies to the broader file server infrastructure.

\* Option C (Container): Incorrect. Containers in Nutanix are logical storage pools managed by AOS, used to store data for VMs, Files, and other services. While Files data resides in a container, workload optimization is not configured at the container level-it is specific to the Files deployment.

\* Option D (File Server): Correct. Workload optimization in Nutanix Files is configured at the File Server level, which consists of multiple FSVMs (as established in Question 13). The File Server is the entity that manages all FSVMs, shares, and resources, and optimization tasks (e.g., scaling FSVMs, adjusting resources) are applied at this level to handle workloads efficiently.

Why Option D?

Workload optimization in Nutanix Files involves adjusting resources and configurations at the File Server level, such as scaling the number of FSVMs (as in Question 13) or tuning memory and CPU for the File Server. The File Server encompasses all FSVMs and shares, making it the entity where optimization is configured to ensure the entire deployment can handle the workload effectively.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"Workload optimization in Nutanix Files is configured at the File Server level. This involves adjusting the number of FSVMs, allocating resources (e.g., CPU, memory), and tuning configurations to optimize the File Server for specific workloads."

:

#### NEW QUESTION # 79

Before upgrading Files or creating a file server, which component must first be upgraded to a compatible version?

- A. File Analytics
- B. FSVM
- C. FSM
- **D. Prism Central**

**Answer: D**

Explanation:

The component that must first be upgraded to a compatible version before upgrading Files or creating a file server is Prism Central. Prism Central is a web-based user interface that allows administrators to manage multiple Nutanix clusters and services, including Files. Prism Central must be upgraded to a compatible version with Files before upgrading an existing file server or creating a new file server. Otherwise, the upgrade or creation process may fail or cause unexpected errors. References: Nutanix Files Administration Guide, page 21; Nutanix Files Upgrade Guide

#### NEW QUESTION # 80

An administrator is attempting to create a share that will provide user access via SMB and NFS. However, the Enable multiprotocol accounts for NFS clients settings is not available. What would cause this issue?

- A. NFS configured to use unmanaged authentication.
- B. The file server instance was only configured with SMB.
- C. The incorrect Files license has been applied.
- **D. The connection to Active Directory has not been configured.**

**Answer: D**

Explanation:

The cause of this issue is that the connection to Active Directory has not been configured. Active Directory is a service that provides centralized authentication and authorization for Windows-based clients and servers. To create a share that will provide user access via SMB and NFS, the administrator must first configure the connection to Active Directory in the Files Console. This will allow the administrator to enable multiprotocol accounts for NFS clients, which are accounts that map NFS users to SMB users and groups for consistent access control across both protocols. References: Nutanix Files Administration Guide, page 32; Nutanix Files Solution Guide, page 6

#### NEW QUESTION # 81

.....

Do you want to pass NCP-US-6.5 practice test in your first attempt with less time? Then you can try our latest training certification exam materials. We not only provide you valid NCP-US-6.5 exam answers for your well preparation, but also bring guaranteed success results to you. The NCP-US-6.5 pass review written by our IT professionals is the best solution for passing the technical and complex certification exam.
