What's more, part of that iPassleader NCP-US-6.5 dumps now are free: <https://drive.google.com/open?id=1ID--c34jriPI-4f7ZgNGDOfbLt-b35Av>

The community has a lot of talent, people constantly improve their own knowledge to reach a higher level. But the country's demand for high-end IT staff is still expanding, internationally as well. So many people want to pass Nutanix NCP-US-6.5 certification exam. But it is not easy to pass the exam. However, in fact, as long as you choose a good training materials to pass the exam is not impossible. We iPassleader Nutanix NCP-US-6.5 Exam Training materials in full possession of the ability to help you through the certification. iPassleader website training materials are proved by many candidates, and has been far ahead in the international arena. If you want to through Nutanix NCP-US-6.5 certification exam, add the iPassleader Nutanix NCP-US-6.5 exam training to Shopping Cart quickly!

iPassleader is an authoritative study platform to provide our customers with different kinds of NCP-US-6.5 exam material to learn, and help them pass the NCP-US-6.5 exam as well as get their expected scores. There are three different versions of our NCP-US-6.5 study preparation: PDF, Software and APP online. To avoid their loss for choosing the wrong NCP-US-6.5 learning questions, we offer related three kinds of free demos for our customers to download before purchase. Just come and try!

NCP-US-6.5 Updated Test Cram & Valid NCP-US-6.5 Test Prep

Our NCP-US-6.5 study materials target all users and any learners, regardless of their age, gender and education background. We provide 3 versions for the clients to choose based on the consideration that all the users can choose the most suitable version to

learn. The 3 versions each support different using method and equipment and the client can use the NCP-US-6.5 Study Materials on the smart phones, laptops or the tablet computers.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q116-Q121):

NEW QUESTION # 116

What is the minimum and maximum file size limitations for Smart Tiering?

- A. 128 IOB minimum and 5 TiB maximum
- B. 128 KiB minimum and 13 TiB maximum
- C. 64 KiB minimum and 5 TiB maximum
- D. 64 KiB minimum and 15 TiB maximum

Answer: C

Explanation:

Smart Tiering is a feature that allows Files to tier data across different storage tiers based on the file size and access frequency. Smart Tiering supports files with a minimum size of 64 KiB and a maximum size of 5 TiB². Reference: Nutanix Files Administration Guide²

NEW QUESTION # 117

An administrator has deployed a new Files cluster within a Windows Environment. After some days, he Files environment is not able to synchronize users with the Active Directory server anymore. The administrator observes a large time difference between the Files environment and the Active Directory Server that is responsible for the behavior. How should the administrator prevent the Files environment and the AD Server from having such a time difference in future?

- A. Use 0.pool.ntp.org as the NTP Server for the AD Server.
- B. Connect to every FSVM and edit the time manually.
- C. Use the same NTP Servers for the File environment and the AD Server.
- D. Use 0.pool.ntp.org as the NTP Server for the Files environment.

Answer: C

Explanation:

The administrator should prevent the Files environment and the AD Server from having such a time difference in future by using the same NTP Servers for the File environment and the AD Server. NTP (Network Time Protocol) is a protocol that synchronizes the clocks of devices on a network with a reliable time source. NTP Servers are devices that provide accurate time information to other devices on a network.

By using the same NTP Servers for the File environment and the AD Server, the administrator can ensure that they have consistent and accurate time settings and avoid any synchronization issues or errors. References: Nutanix Files Administration Guide, page 32; Nutanix Files Troubleshooting Guide

NEW QUESTION # 118

ionization deployed Files in multiple sites, including different geographical locations across the globe. The organization has the following requirements to improves their data management lifecycle:

- * Provide a centralized management solution.
- * Automate archiving tier policies for compliance purposes.
- * Protect the data against ransomware.

Which solution will satisfy the organization's requirements?

- A. Files Analytics
- B. Data Lens
- C. Prims Central

Answer: B

Explanation:

Data Lens can provide a centralized management solution for Files deployments in multiple sites, including different geographical

locations. Data Lens can also automate archiving tier policies for compliance purposes, by allowing administrators to create policies based on file attributes, such as age, size, type, or owner, and move files to a lower-cost tier or delete them after a specified period. Data Lens can also protect the data against ransomware, by allowing administrators to block malicious file signatures from being written to the file system. Reference: Nutanix Data Lens Administration Guide

NEW QUESTION # 119

An administrator needs to configure Files to forward logs to a syslog server. How could the administrator complete this task?

- A. Use the CLI in a CVM.
- B. Configure the syslog in Prism Element.
- C. Configure the syslog in Files Console.
- **D. Use the CLI in an FSVM.**

Answer: D

Explanation:

Nutanix Files, part of Nutanix Unified Storage (NUS), generates logs for file service operations, which can be forwarded to a syslog server for centralized logging and monitoring. The process to configure syslog forwarding for Nutanix Files involves interacting with the File Server Virtual Machines (FSVMs), as they handle the file services and generate the relevant logs.

Analysis of Options:

* Option A (Configure the syslog in Prism Element): Incorrect. Prism Element manages cluster-level settings, such as storage and VM configurations, but it does not provide a direct interface to configure syslog forwarding for Nutanix Files. Syslog configuration for Files is specific to the FSVMs.

* Option B (Configure the syslog in Files Console): Incorrect. The Files Console (accessible via Prism Central) is used for managing Files shares, FSVMs, and policies, but it does not have a built-in option to configure syslog forwarding. Syslog configuration requires direct interaction with the FSVMs.

* Option C (Use the CLI in an FSVM): Correct. Nutanix Files logs are managed at the FSVM level, and syslog forwarding can be configured by logging into an FSVM and using the command-line interface (CLI) to set up the syslog server details. This is the standard method documented by Nutanix for enabling syslog forwarding for Files.

* Option D (Use the CLI in a CVM): Incorrect. The Controller VM (CVM) manages the Nutanix cluster's storage and services, but it does not handle Files-specific logging. Syslog configuration for Files must be done on the FSVMs, not the CVMs.

Configuration Process:

To configure syslog forwarding, the administrator would:

* SSH into one of the FSVMs in the Files deployment.

* Use the nutanix user account to access the FSVM CLI.

* Run commands to configure the syslog server (e.g., modify the /etc/syslog.conf file or use Nutanix-specific commands to set the syslog server IP and port).

* Restart the syslog service on the FSVM to apply the changes. This process ensures that Files logs are forwarded to the specified syslog server.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"To forward Nutanix Files logs to a syslog server, you must configure syslog settings on each FSVM. Log in to an FSVM using SSH and the 'nutanix' user account. Use the CLI to update the syslog configuration by specifying the syslog server's IP address and port. After configuration, restart the syslog service to apply the changes."

:

Nutanix Files Administration Guide, Version 4.0, Section: "Configuring Syslog for Nutanix Files" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files Logging and Monitoring".

NEW QUESTION # 120

An administrator is required to place all iSCSI traffic on an isolated network.

How can the administrator meet this requirement?

- A. Create a new network interface on the CVMs via ncli.
- B. Create a Volumes network in Prism Central.
- **C. Configure network segmentation for Volumes.**
- D. Configure the Data Services IP on an isolated network.

Answer: C

Explanation:

The administrator can meet this requirement by configuring network segmentation for Volumes. Network segmentation is a feature that allows administrators to isolate network traffic for different types of services, such as Volumes, Files, or Objects, on a Nutanix cluster. Network segmentation can improve the security, performance, and manageability of network traffic. By configuring network segmentation for Volumes, the administrator can place all iSCSI traffic on an isolated network and prevent it from interfering with other services or applications. Reference: Nutanix Volumes Administration Guide, page 15; Nutanix Volumes Solution Guide, page 7

NEW QUESTION # 121

.....

IT certifications are playing an important role in our career. In order to get a promotion and get more money, every IT people put more effort into their work. Instead this way, we can depend on our strength to won the boss's heart. Nutanix NCP-US-6.5 certification is vitally important for IT people. In fact, the test is not difficult as you have imagined it. You only need to select the appropriate training materials. iPassleader Nutanix NCP-US-6.5 Practice Test will regularly update the exam dumps to fulfill your requirements. So, our Nutanix NCP-US-6.5 test is the latest. Hurry up! You will achieve your aim.
