NCS-Core Actual Tests - NCS-Core Valid Exam Question

What's more, part of that Actual4Cert NCS-Core dumps now are free: https://drive.google.com/open?id=1jIXanKjfYOzTuPikzpCxQM8HwMWEYjq4

Different with other similar education platforms on the internet, the Nutanix Certified Services Core Infrastructure Professional guide torrent has a high hit rate, in the past, according to data from the students' learning to use the NCS-Core test torrent, 99% of these students can pass the qualification test and acquire the qualification of their yearning, this powerfully shows that the information provided by the NCS-Core Study Tool suit every key points perfectly, targeted training students a series of patterns and problem solving related routines, and let students answer up to similar topic.

The disparity between our NCS-Core practice materials and others are distinct. We strive for perfection all these years and get satisfactory results with concerted cooperation between experts, and all questions points in our NCS-Core real exam are devised and written base on the real exam. Do not let other NCS-Core Study Dumps mess up your performance or aggravate learning difficulties. The efficiency and accuracy of our NCS-Core learning guide will not let you down.

NCS-Core Valid Exam Question, Training NCS-Core Kit

If you want to understand our NCS-Core exam prep, you can download the demo from our web page. You do not need to spend money; because our NCS-Core test questions provide you with the demo for free. You just need to download the demo of our NCS-Core exam prep according to our guiding; you will get the demo for free easily before you purchase our products. By using

the demo, we believe that you will have a deeply understanding of our NCS-Core Test Torrent. We can make sure that you will like our products; because you will it can help you a lot.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q192-Q197):

NEW QUESTION # 192
After the successful creation of clusters, the customer wants to ensure that alerts are sent automatically to Nutanix support. Which Nutanix feature should the consultant ensure is enabled?

- A. Pulse
- B. Support Tunnel
- C. insights
- D. Support Portal

Answer: A

Explanation:
To ensure that alerts are automatically sent to Nutanix support, the Nutanix feature called Pulse must be enabled. Nutanix Pulse is an automated system intelligence service that collects health information and system alerts from Nutanix clusters and sends them to Nutanix support for proactive monitoring and troubleshooting. Enabling this feature is crucial for maintaining high availability and performance of the Nutanix environment, as it allows Nutanix support to quickly respond to and manage potential issues. References: Nutanix Pulse Documentation, Nutanix Support Services Information.

NEW QUESTION # 193
A customer has a G6 AHV cluster with 4x10GbE NICs on each node and the following configuration:
* Networking is set to default
* Only two NICs are connected
The customer receives the following critical message:
The NIC is disconnected from the switch, or the switchport is failing.
What should the consultant verify to resolve the issue?

- A. The NICs are connected for balance-slb.
- B. The NICs are configured for active-backup.
- C. The other two 10GbE connections are removed from the default bond.
- D. The VLANs are configured correctly on the switch or tagged on the cluster.

Answer: B

Explanation:
Given the critical message about the NIC being disconnected or the switchport failing, the consultant should first verify the bonding mode of the NICs, especially since only two out of four 10GbE NICs are connected. In an AHV cluster, the NICs can be configured in different bonding modes such as active-active or active-backup. Ensuring that the NICs are configured for active-backup can provide redundancy by allowing one NIC to take over if the other fails, which seems to be necessary given the critical error indicating a possible disconnection or switchport failure. NEW QUESTION # 194
During a pre-engagement call, a customer explains that network cables are missing from the boxes. The consultant examines the bill of materials more closely to verify the quantity and type required by the hardware.
The rack is already equipped with one OOBM Ethernet switch and two 10GbE SFP+ ToR switches.

Product	Product Code	Quantity
10GbE, 2-port, SFP+ Network Adapter (Intel 82599ES)	C-NIC-10GSFP2-A-CM	3.00
3.84TB 3.5" SSD	C-SSD-3840GB-3.5-A-CM	6.00
64GB Memory Module (2933MHz DDR4 RDIMM)	C-MEM-64GB-2933-A-CM	12.00
Intel Xeon Processor 6210U (2.5 GHz, 20 cores)	C-CPU-6210U-CM	3.00
L-CORES-PRO-PRD-5YR	L-CORES-PRO-PRD-5YR	60.00
L-FLASHTiB-PRO-PRD-5YR	L-FLASHTiB-PRO-PRD-5YR	21.00
No Cables	C-CBL-NONE-CM	3.00
No HDD	C-HDD-NONE-CM	3.00
NX-1175S-G7, 1 Node configuration	NX-1175S-G7-CM	3.00
PRD HW SUP	S-HW-PRD	3.00

Which cables should the consultant recommend to the customer for implementing in this scenario?

- A. Six lOGbE cables
- B. Six Ethernet Cat7 cables
- C. Three DAC 10GbE cables and 3 Ethernet cables
- D. Six DAC 10GbE cables and 3 Ethernet cables

Answer: D

Explanation:
Considering the equipment setup with one Out-of-Band Management (OOBM) Ethernet switch and two
10GbE SFP+ Top of Rack (ToR) switches, the consultant should recommend six DAC (Direct Attach Cable)
10GbE cables and three Ethernet cables. The DAC 10GbE cables are suitable for connecting the nodes to the ToR switches to handle high-speed data transfers, while the Ethernet cables are necessary for connections related to management purposes, such as connecting to the OOBM switch for remote management tasks. This recommendation ensures adequate connectivity for both data and management networks.References: Nutanix Hardware and Installation Guide, Best Practices for Network Cable Management.

NEW QUESTION # 195
A customer has NearSync configured. When the administrator tries to restore a snapshot from 3 minutes ago, it is not available. The snapshots are happening at 15-minute intervals instead of at the 5-minute configured interval. When the protection domain was initially set up, the snapshots were happening at the expected
5-minute interval.
What should the customer do to enable the snapshots to happen at the expected interval?

- A. Fix a connectivity issue because the protection domain reverted to Async
- B. Configure the protection domain to take snapshots on 15-minute intervals
- C. Change the protection domain to use Async DR
- D. Utilize Metro Availability to meet this requirement

Answer: A

Explanation:
If the administrator observes that the snapshot intervals have changed from the initially configured 5-minute intervals to 15-minute intervals, it indicates a potential issue with the setup. Option C, "Fix a connectivity issue because the protection domain reverted to Async," addresses the likely cause-a connectivity problem that caused the system to revert to longer, asynchronous DR snapshot intervals.
NearSync typically allows for very frequent snapshots, but if there is a connectivity or configuration issue, it might fall back to less frequent asynchronous DR settings. Identifying and resolving any connectivity issues would allow the NearSync configuration to operate as initially intended.
References:The mechanics of NearSync and its behavior under connectivity issues are discussed in detail in Nutanix's documentation

and troubleshooting guides, which describe how the system handles fallback scenarios and how to rectify them.

NEW QUESTION # 196
An existing Nutanix customer has several clusters in production and is adding a new cluster. The customer wants to create an AHV cluster that has already been racked and powered on remotely, with the factory image, using Prism Central.
Which step should the consultant take next?

- A. Build the cluster with the Foundation Applet
- B. Bare metal image the nodes with the Foundation VM.
- C. Build the cluster with the Foundation VM.
- D. Build the cluster with Foundation Central.

Answer: D

Explanation:
For adding a new cluster to an existing set of production clusters using AHV and wanting to manage the setup remotely via Prism Central, the most appropriate and efficient method is to use Foundation Central.
Foundation Central allows for the remote deployment and configuration of Nutanix clusters through Prism Central, facilitating the foundation process without needing physical access or separate foundational utilities like the Foundation VM or Applet. It uses the factory image on the nodes and is designed to streamline cluster expansions and deployments in enterprise environments. References: Nutanix Foundation Central User Guide, Nutanix Prism Central documentation.
