2025 Nutanix Realistic NCS-Core Cert Exam Pass Guaranteed Quiz

Team of ITdumpsfree is dedicated to giving Nutanix NCS-Core exam takers the updated NCS-Core practice exam material to enable them to clear the exam in one go. Our customers may be sure they are getting the Nutanix NCS-Core Real Exam Questions PDF from ITdumpsfree for speedy preparation. You can also carry the NCS-Core PDF exam questions in hard copy as they are

printable as well.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q305-Q310):

NEW QUESTION # 305

Which configuration item is a hard requirement to deploy a Nutanix cluster?

- A. CVM IP address
- B. Nutanix cluster name
- C. Motion IP address
- D. Cluster Virtual IP

Answer: A

Explanation:

The CVM IP address is a hard requirement for deploying a Nutanix cluster. Each CVM must have a unique IP address assigned to it as this IP address is critical for cluster operations, including data replication, management activities, and communication between CVMs and hypervisors. The other options, while important for various functionalities, do not represent a hard requirement for initial deployment. References:

* The Nutanix Bible, Cluster Configuration chapter (<https://www.nutanixbible.com/>)

NEW QUESTION # 306

An administrator is using Nutanix Move to migrate a Windows VM from ESXi to AHV. Automated guest preparation is failing with an error:

Account has UAC enabled error

The administrator is using the local built-in administrator account for the Windows VM. Admin approval mode must remain enabled.

What should the administrator do to continue with the migration with Nutanix Move?

- A. Follow manual VM preparation guidelines
- B. Reboot the Windows VM and try the migration again
- C. Use a Domain Admin account for the Windows VM
- D. Place Windows VM in Maintenance Mode

Answer: A

Explanation:

Explanation:

<https://next.nutanix.com/move-application-migration-19/nutanix-xtract-validation-failed-user-must-belong-in-a-g>

Solution:

NUTANIX™

If local built in "administrator" user is being used for guest preparation, **disable** the following Local Security policy:

Computer Configuration\Windows Settings\Security Settings\Local Policies\Security Options\User Account Control: Admin Approval Mode for the Built-in Administrator account

<https://docs.microsoft.com/en-gb/windows/security/threat-protection/security-policy-settings/user-account-control-admin-approval-mode-for-the-built-in-administrator-account>

Or use manual guest preparation from elevated PowerShell.

NEW QUESTION # 307

A guest VM is reported to have poor storage performance. It has an I/O profile of 80% read, 20% write, and the HDDs form more than 50% of the read source.

What should an administrator do to resolve this issue?

- A. Increase the OPLOG
- B. Use HDDs with higher RPM
- C. Increase the write cache
- D. Increase SSD capacity

Answer: D

Explanation:

NEW QUESTION # 308

A VM is exhibiting one or more of the following baseline values based on the past 30 days:

- * CPU usage < 20%
- * CPU ready time < 5%
- * Memory usage < 50% (moderately) or < 20% (severely)
- * Memory swap rate = 0 Kbps

Which type of VM is being described?

- A. Over-Provisioned VM
- B. Bully VM
- C. Constrained VM
- D. Inactive VM

Answer: A

Explanation:

Finding Waste and Right-Sizing VMs

The VM efficiency features in Prism Pro recommend VMs within the environment that are candidates for reclaiming unused resources that you can then return to the cluster. Click each tab to learn more.

Overprovisioned

- ➔ An overprovisioned VM is the opposite of a constrained VM, meaning it is a VM that is over-sized and wasting resources which are not needed. A VM is considered over-provisioned when it exhibits one or more of the following baseline values, based on the past 30 days: CPU usage < 50% (moderate) or < 20% (severe) and CPU ready time < 5%, Memory usage < 50% (moderate) or < 20% (severe), and memory swap rate = 0 Kbps.

Inactive

- ➔ A VM is inactive in either of the following states: A VM is considered dead when it has been powered off for at least 30 days. A VM is considered a zombie when it is powered on but does fewer than 30 read or write I/Os (total), and receives or transfers fewer than 1000 bytes per day for the past 30 days.

Constrained

- ➔ A constrained VM is one that does not have enough resources for the demand and can lead to performance bottlenecks. A VM is considered constrained when it exhibits one or more of the following baseline values, based on the past 30 days: CPU usage > 90% (moderate), 95% (severe) CPU ready time > 5% , 10% Memory usage > 90%, 95%, Memory swap rate > 0 Kbps (no moderate value).

Bully

- ➔ A bully VM is one that consumes too many resources and causes other VMs to starve. A VM is considered a bully when it exhibits one or more of the following conditions for over an hour: CPU ready time > 5%, memory swap rate > 0 Kbps, host I/O Stargate CPU usage > 85%.

NEW QUESTION # 309

Which two components must be identified to validate that software compatibility requirements are met for Nutanix Cluster Installation? (Choose two.)

- A. Guest OS
- **B. Hypervisor**
- **C. AOS**
- D. Firmware

Answer: B,C

NEW QUESTION # 310

.....
