NCS-Core Latest Test Online & NCS-Core High Quality

To develop a new study system needs to spend a lot of manpower and financial resources, first of all, essential, of course, is the most intuitive skill learning materials, to some extent this greatly affected the overall quality of the learning materials. Our Nutanix Certified Services Core Infrastructure Professional study training dumps do our best to find all the valuable reference books, then, the product we hired experts will carefully analyzing and summarizing the related materials, such as: Nutanix NCS-Core exam, eventually form a complete set of the review system. Experts before starting the compilation of "the NCS-Core Latest Questions", has put all the contents of the knowledge point build a clear framework in mind, though it needs a long wait, but product experts and not give up, but always adhere to the effort, in the end, they finished all the compilation. So, you're lucky enough to meet our NCS-Core test guide 1, and it's all the work of the experts. If you want to pass the qualifying exam with high quality, choose our products. We are absolutely responsible for you. Don't hesitate!

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q234-Q239):

NEW QUESTION # 234

An administrator configure Active Directory (AD) authentication for their Nutanix environment. When login in using an AD user account, the login process takes more than one minute to complete. No delay occurs when logging a local account. What should the administrator confirm to resolve this issue?

- A. The domain controller being used is configured as a global catalog server.

- B. Active directory lookups are configured to use Non-Recursive mode.
- C. The service Account Username is correct for the domain.
- D. The user search base for the group is configured correctly

Answer: B

Explanation:

In a Nutanix environment, if the login process using an Active Directory (AD) user account takes more than a minute to complete, it could be due to the configuration of the AD lookups.

Active Directory lookups can be configured to use either Recursive or Non-Recursive mode. In Recursive mode, the system will look up each group that a user is a member of, then each group that those groups are members of, and so on. This can lead to a large number of lookups and potentially slow down the login process.

On the other hand, in Non-Recursive mode, the system only looks up the direct groups that a user is a member of. This can significantly reduce the number of lookups and speed up the login process.

Therefore, the administrator should confirm that Active Directory lookups are configured to use Non-Recursive mode to resolve this issue.

NEW QUESTION # 235

A customer needs a DR solution designed around the following requirements:

- * There are 8 ms of latency between Sites A and B
- * The administrator needs the shortest RPO/RTO possible
- * Application consistent snapshots are required
- * Use of Nutanix VSS

Which Data Protection Method should be used?

- A. Metro Availability
- B. Async
- C. Cloud Connect
- D. Near Sync

Answer: D

Explanation:

NEW QUESTION # 236

A VM is exhibiting one or more of the following baseline values based on the past 30 days:

- * CPU usage < 20%
- * CPU ready time < 5%
- * Memory usage < 50% (moderately) or < 20% (severely)
- * Memory swap rate = 0 Kbps

Which type of VM is being described?

- A. Constrained VM
- B. Inactive VM
- C. Bully VM
- D. Over-Provisioned VM

Answer: D

Explanation:

Finding Waste and Right-Sizing VMs

The VM efficiency features in Prism Pro recommend VMs within the environment that are candidates for reclaiming unused resources that you can then return to the cluster. Click each tab to learn more.

Overprovisioned

- An overprovisioned VM is the opposite of a constrained VM, meaning it is a VM that is over-sized and wasting resources which are not needed. A VM is considered over-provisioned when it exhibits one or more of the following baseline values, based on the past 30 days: CPU usage < 50% (moderate) or < 20% (severe) and CPU ready time < 5%, Memory usage < 50% (moderate) or < 20% (severe), and memory swap rate = 0 Kbps.

Inactive

- A VM is inactive in either of the following states: A VM is considered dead when it has been powered off for at least 30 days. A VM is considered a zombie when it is powered on but does fewer than 30 read or write I/Os (total), and receives or transfers fewer than 1000 bytes per day for the past 30 days.

Constrained

- A constrained VM is one that does not have enough resources for the demand and can lead to performance bottlenecks. A VM is considered constrained when it exhibits one or more of the following baseline values, based on the past 30 days: CPU usage > 90% (moderate), 95% (severe) CPU ready time > 5%, 10% Memory usage > 90%, 95%, Memory swap rate > 0 Kbps (no moderate value).

Bully

- A **bully** VM is one that consumes too many resources and causes other VMs to starve. A VM is considered a **bully** when it exhibits one or more of the following conditions for over an hour: CPU ready time > 5%, memory swap rate > 0 Kbps, host I/O Stargate CPU usage > 85%.

NEW QUESTION # 237

While reviewing the BOM during the kickoff call, a consultant notices that there are six NX nodes and 12 SFP+ modules, but no fiber cables are listed.

Which statement is correct regarding this scenario?

- A. Nutanix provides fiber cables based on the fiber channel ports on the server.
- B. Only copper cables, not fiber cables, are required for SFP* modules.
- C. The consultant should remind the customer that it is their responsibility to procure compatible fiber cables.
- D. The customer can use any fiber cable from existing network devices.

Answer: C

Explanation:

When deploying Nutanix hardware, it is essential to ensure that all necessary components are included in the Bill of Materials (BOM). In this case, the BOM includes SFP+ modules but lacks the fiber cables needed for connectivity. The SFP+ modules indicate a requirement for fiber optic cables, and it's crucial for the consultant to ensure the client understands their responsibility to procure compatible cables. Nutanix typically does not provide fiber cables as these are considered network infrastructure components, which vary based on specific network requirements and setups.

NEW QUESTION # 238

A customer has two mission-critical applications and needs to have them backed up to a remote location. The remote location is connected using a leased line and has an average latency of 7 ms.

Which Nutanix technology will provide the shortest RPO possible?

- A. Metro Availability
- **B. Leap**
- C. Asyn&DR
- D. NearSync

Answer: B
