With the purchasing of Exam4Docs NCS-Core exam practice questions you get an opportunity to get free Exam4Docs NCS-Core Exam Dumps questions updates for up to 1 year from the date of Exam4Docs NCS-Core exam questions purchase.

Nutanix NCS-Core certification is highly valued in the industry as it demonstrates a professional's expertise in Nutanix technology. Nutanix Certified Services Core Infrastructure Professional certification is recognized by companies across different industries, and it can help professionals advance their careers. Nutanix Certified Services Core Infrastructure Professional certification is valid for two years, after which professionals are required to renew their certification by taking a recertification exam. Overall, the Nutanix NCS-Core exam is an excellent certification for professionals who work with Nutanix core infrastructure and want to demonstrate their expertise in the field.

Nutanix NCS-Core Exam is a comprehensive exam that covers a wide range of topics related to Nutanix Core Infrastructure. NCS-Core exam is divided into two parts: a multiple-choice section and a practical exam. The multiple-choice section tests the candidate's knowledge of Nutanix Core Infrastructure, while the practical exam tests the candidate's ability to configure and manage Nutanix Core Infrastructure.

Use Nutanix Certified Services Core Infrastructure Professional sure pass guide dumps to pass Nutanix Certified Services Core Infrastructure Professional actual test

Our company guarantees this pass rate from various aspects such as content and service on our NCS-Core exam questions. We have hired the most authoritative professionals to compile the content Of the NCS-Core study materials. And we offer 24/7 service online to help you on all kinds of the problems about the NCS-Core learning guide. Of course, we also consider the needs of users, ourNCS-Core exam questions hope to help every user realize their dreams.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q41-Q46):

NEW QUESTION # 41

In a 20-node ESXi deployment, the customer needs additional resiliency to survive the loss of two nodes concurrently. Which configuration should the consultant use to ensure that the appropriate resources are available?

- A. Storage reservation for 5%; HA admission control for 5%, cluster RF2
- **B. Storage reservation for 10%; HA admission control for 10%, cluster RF3**
- C. Storage reservation for 10%; HA admission control for 10%, cluster RF2
- D. Storage reservation for 5%; HA admission control for 5%, cluster RF3

Answer: B

NEW QUESTION # 42

Refer to the exhibit.

The screenshot shows the Nutanix Prism interface. At the top, there are tabs for 'Overview' and 'Table', and buttons for 'Async DR' and 'Remote Site'. Below these, a table lists protection domains with columns for NAME and status. The domains are ADR_local, ADR_local_no_cg, ADR_remote, ADR_remote_no_cg, and ADR_remote_palo02. To the right, a pop-up window titled 'Async DR Alerts' displays three error messages: 'Unable to locate VM(s) Lin_Ntnx_Uvm_1 protected by protection domain 'ADR_local_no_cg'', 'Unable to locate VM(s) Lin_Ntnx_Uvm_1 protected by protection domain 'ADR_local_no_cg'', and 'Unable to locate VM(s) Lin_Ntnx_Uvm_1 protected by protection domain 'ADR_local_no_cg''.

After performing ESXi to AHV conversion on a cluster, the alerts shown in the exhibit display on Prism. What should the administrator do to resolve this issue efficiently?

- **A. Remove VMs from the Protection Domain and add them back in.**
- B. Remove the VMs, create a new Protection Domain, and add VMs to it
- C. Create a new Protection Domain and add the VMs to it.
- D. Delete the Protection Domain, create a new Protection Domain, and add the VMs to it

Answer: A

NEW QUESTION # 43

A guest VM is reported to have poor storage performance. It has an I/O profile of 80% read, 20% write, and the HDDs form more

than 50% of the read source.

What should an administrator do to resolve this issue?

- A. Use HDDs with higher RPM
- B. Increase the write cache
- C. Increase the OPLOG
- **D. Increase SSD capacity**

Answer: D

NEW QUESTION # 44

A customer is deploying Nutanix AHV clusters over hundreds of remote sites worldwide. Prism Central will be used to centrally manage all clusters. Customer security policy requires the use of MS Active Directory (AD) groups to authenticate all network devices.

Which method should be consultant use to meet the requirements?

- A. Proxy Prism Element traffic through Prism Central.
- **B. Integrate AD authentication on all Prism Element Clusters.**
- C. Integrate AD authentication on Prism Central Only.
- D. Integrate AD authentication on all CVMs.

Answer: B

Explanation:

When managing multiple Nutanix AHV clusters across various locations with a centralized management through Prism Central, it is essential to secure each cluster individually. Integrating Microsoft Active Directory authentication directly on all Prism Element clusters allows each site to independently authenticate users while still being centrally managed. This method aligns with security policies that require network devices to authenticate via AD groups, ensuring that local administrative actions at each site are also secured under the same policy.

NEW QUESTION # 45

An administrator is deploying an application that requires maximum I/O throughput for scratch data. The administrator is concerned that the throughput requirement is greater than what can be provided by a single cluster node.

What should the administrator do to meet this requirement?

- A. Create a virtual disk attached to the VM's PCI interface
- **B. Create a volume group with several virtual disks and attach to the VM**
- C. Create a volume group with one virtual disk attached to the VM
- D. Create several virtual disks attached to the VM's virtual SCSI controller

Answer: B
