▼

☐ datacenter outages
 ☐ managed disks
 ☐ regional outages

Answer:

Explanation:

Virtual machines that share [answer choice] will be susceptible to a storage outage.

Virtual machines in the Azure Availability Set can support [answer choice].

Explanation:

Box 1: the same fault domain

Fault domains define the group of virtual machines that share a common power source and network switch. If a storage fault domain fails due to hardware or software failure, only the VM instance with disks on the storage fault domain fails.

Box 2: managed disks

Managed disks provide better reliability for Availability Sets by ensuring that the disks of VMs in an Availability Set are sufficiently isolated from each other to avoid single points of failure. It does this by automatically placing the disks in different storage fault domains (storage clusters) and aligning them with the VM fault domain.
