Oracle Data Platform 2025 Foundations Associate Sample Questions (Q22-Q27):

NEW QUESTION # 22
New hardware innovations of the Exadata X8M allow customers to take advantage of Remote Direct Memory Access (RDMA). What resource does RDMA access?

- A. Storage Disks
- B. Persistent Memory
- C. Compute Instances
- D. Database Servers

Answer: B

Explanation:
The Exadata X8M leverages "Remote Direct Memory Access" (RDMA) to access "Persistent Memory" (B). RDMA allows direct memory-to-memory data transfer between systems without CPU involvement, enhancing performance. In Exadata X8M, RDMA accesses persistent memory (PMEM) to accelerate database operations by reducing latency and improving I/O throughput. "Compute Instances" (A) and "Database Servers" (D) are broader entities, not the specific resource RDMA targets, while "Storage Disks" (C) are traditional storage, not memory. Oracle's Exadata documentation highlights RDMA's use with persistent memory in X8M systems.

NEW QUESTION # 23
Oracle Lakehouse provides extensive data processing capabilities, to accommodate the migration of existing architectures or the creation of new, agile ones. Which service does NOT provide data processing on Oracle Cloud Infrastructure (OCI) Lakehouse?

- A. NoSQL Service
- B. Big Data Service
- C. Autonomous Database
- D. OCI Data Flow

Answer: A

NEW QUESTION # 24
Oracle Cloud and Microsoft Azure have an interconnect for workloads across cloud. Which two are also benefits this partnership and interconnect provide?

- A. Unified identity and access management
- B. Upgrade compliance
- C. Connection to other multicloud environments

- D. Low Latency

Answer: A,D

Explanation:
The Oracle Cloud and Microsoft Azure interconnect offers "Low Latency" (B), achieved through a high-speed, private connection between OCI and Azure data centers, reducing delays for cross-cloud workloads. It also provides "Unified identity and access management" (C), integrating Oracle IAM with Azure Active Directory for seamless user authentication. "Upgrade compliance" (A) is vague and not a documented benefit, while "Connection to other multicloud environments" (D) is not specific to this partnership. Oracle's multicloud documentation highlights latency and identity integration as key advantages.

NEW QUESTION # 25
What is NOT a workload that can be selected when provisioning an Autonomous Database?

- A. APEX
- B. JSON
- C. MySQL
- D. Data Warehouse

Answer: C

Explanation:
When provisioning an "Autonomous Database" on Oracle Cloud Infrastructure, the supported workload types include "JSON" (B) for document-centric applications, "Data Warehouse" (C) for analytics, and "APEX" (D) for low-code application development, alongside Transaction Processing (not listed here). "MySQL" (A) is not a workload type for Autonomous Database; instead, it is a separate database service (Oracle MySQL Database Service) on OCI, not part of the Autonomous Database offering. Oracle's documentation specifies the distinct workload options available during Autonomous Database provisioning, excluding MySQL.

NEW QUESTION # 26
How does the Converged Database help to access data using an API?

- A. Each database comes with a REST-enabled compute instance to provide access to data
- B. Developers can point their application to the location of ADB Wallet which integrates all REST API calls
- C. A REST API is automatically generated on top of SQL or stored procedures
- D. The database provides only one universal REST interface which makes integration of applications extremely agile

Answer: C

Explanation:
The "Converged Database" facilitates API access by "A REST API is automatically generated on top of SQL or stored procedures" (B), using Oracle REST Data Services (ORDS). This allows developers to expose database logic as RESTful endpoints without manual coding. Option A is incorrect, as no separate compute instance is provided. Option C oversimplifies, as multiple REST interfaces can be created, not just one. Option D misrepresents the ADB Wallet's role, which is for security, not API generation. Oracle's documentation highlights ORDS auto-generation as a converged feature.
