services know every detail of our NetSec-Generalist Exam Questions. And they are pleased to give guide for 24 hours online. You can get assistant by them as long as you made your inquire.

Palo Alto Networks Network Security Generalist Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which network design for internet of things (IoT) Security allows traffic mirroring from the switch to a TAP interface on the firewall to monitor traffic not otherwise seen?

- A. Firewall outside DHCP path
- B. Firewall in DHCP path
- C. DHCP server on firewall
- D. Firewall as DHCP relay

Answer: A

NEW QUESTION # 42

In conjunction with Advanced URL Filtering, which feature can be enabled after username-to-IP mapping is set up?

- A. Indexed data matching
- B. Host information profile (HIP)
- C. Credential phishing prevention
- D. Client probing

Answer: C

Explanation:

When Advanced URL Filtering is enabled, Credential Phishing Prevention can be activated to protect against phishing attacks by blocking unauthorized credential submissions.

How Credential Phishing Prevention Works:

Uses Username-to-IP Mapping - Identifies users based on their IP and login credentials.

Prevents Credential Theft - Blocks users from submitting corporate credentials to untrusted or malicious websites.

Works Alongside Advanced URL Filtering - Detects and categorizes phishing domains in real-time, stopping credential leaks.

Can Enforce Action-Based Policies - Configures policies to alert, block, or validate credential submissions.

Why Other Options Are Incorrect?

A . Host Information Profile (HIP) ☐

Incorrect, because HIP checks device health but does not prevent credential phishing.

C . Client Probing ☐

Incorrect, because Client Probing is used for User-ID mapping, not phishing prevention.

D . Indexed Data Matching ☐

Incorrect, because Indexed Data Matching is used for DLP (Data Loss Prevention), not for credential protection.

Reference to Firewall Deployment and Security Features:

Firewall Deployment - Protects user credentials from phishing attacks.

Security Policies - Ensures users do not submit credentials to malicious sites.

VPN Configurations - Protects remote users connecting via GlobalProtect from credential theft.

Threat Prevention - Works with Threat Intelligence to detect new phishing sites.

WildFire Integration - Scans unknown websites for phishing behaviors.

Panorama - Centralized enforcement of Credential Phishing Prevention policies.

Zero Trust Architectures - Ensures only legitimate authentication events occur within trusted environments.

Thus, the correct answer is:

☐ B. Credential phishing prevention

NEW QUESTION # 43

Which NGFW function can be used to enhance visibility, protect, block, and log the use of Post-quantum Cryptography (PQC)?

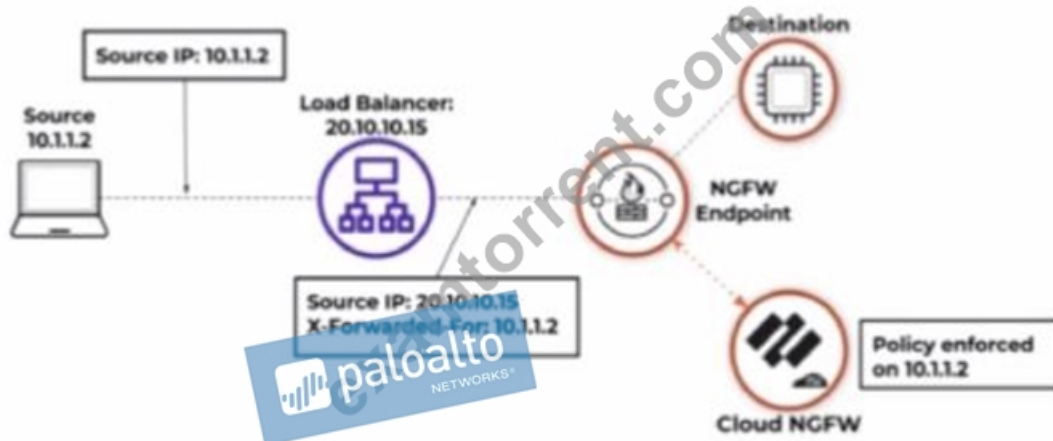

- A. Decryption policy
- B. DNS Security profile

- C. Decryption profile
- D. Security policy

Answer: A

NEW QUESTION # 44

Based on the image below, which source IP address will be seen in the data filtering logs of the Cloud NGFW for AWS with the default rulestack settings?

- A. 10.1.1.3
- B. 20.10.10.15
- C. 20.10.10.16
- D. 10.1.1.2

Answer: A

NEW QUESTION # 45

A company uses Prisma Access to provide secure connectivity for mobile users to access its corporate-sanctioned Google Workspace and wants to block access to all unsanctioned Google Workspace environments. What would an administrator configure in the snippet to achieve this goal?

- A. Dynamic Address Groups
- B. Dynamic User Groups
- C. Tenant restrictions
- D. URL category

Answer: C

NEW QUESTION # 46
