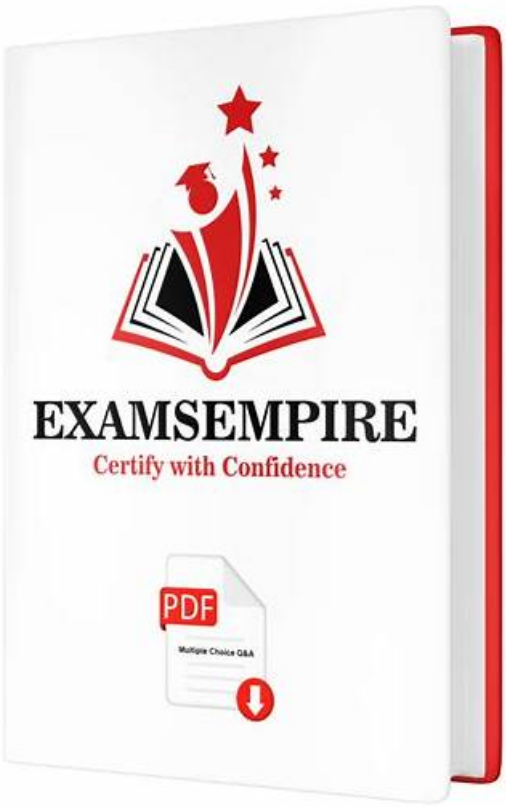
NetSec-Pro Certificate Exam & NetSec-Pro Exam Guide



BONUS!!! Download part of FreePdfDump NetSec-Pro dumps for free: https://drive.google.com/open?id=1YgrF6dL6CG-kJb5PmfH2unPALcfYGTP8

If you buy our NetSec-Pro exam questions, we will offer you high quality products and perfect after service just as in the past. We believe our consummate after-sale service system will make our customers feel the most satisfactory. Our company has designed the perfect after sale service system for these people who buy our NetSec-Pro practice materials. We can always give the most professinal suggestion on our NetSec-Pro learning guide to our customers at the first time for our service are working 24/7 online.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	• Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.
Topic 2	• Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.

Topic 3	• GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.
Topic 4	• Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.
Topic 5	• NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.

NetSec-Pro Exam Guide | NetSec-Pro Updated Demo

The Palo Alto Networks NetSec-Pro certification can play a crucial role in career advancement and increase your earning potential. By obtaining Palo Alto Networks NetSec-Pro certification, you can demonstrate to employers your expertise and knowledge. The Palo Alto Networks world is constantly changing its dynamics. With the Palo Alto Networks NetSec-Pro Certification Exam you can learn these changes and stay updated with the latest technologies and trends.

Palo Alto Networks Network Security Professional Sample Questions (Q46-Q51):

NEW QUESTION # 46
A primary firewall in a high availability (HA) pair is experiencing a current failover issue with ICMP pings to a secondary device. Which metric should be reviewed for proper ICMP pings between the firewall pair?

- A. Link monitoring
- B. Non-functional state
- C. Bidirectional Forwarding Detection (BFD)
- D. Heartbeat polling

Answer: D

Explanation:
Heartbeat pollingis a core HA function to monitor connectivity between HA peers, leveraging ICMP pings to determine link health and availability.
"Heartbeat Polling uses ICMP pings to verify the connectivity and health of the HA peers. If heartbeat polling fails, the firewall considers the peer to be down and may initiate failover." (Source: HA Link and Path Monitoring) If ICMP pings fail, checking heartbeat polling logs helps identify if link or path monitoring triggers the failover.

NEW QUESTION # 47
Which two SSH Proxy decryption profile settings should be configured to enhance the company's security posture? (Choose two.)

- A. Allow sessions when decryption resources are unavailable.
- B. Block sessions when certificate validation fails.
- C. Allow sessions with legacy SSH protocol versions.
- D. Block connections that use non-compliant SSH versions.

Answer: B,D

Explanation:
Blocking non-compliant SSH versionsandfailing certificate validationsare fundamental security measures:
Block sessions when certificate validation fails
"The SSH Proxy profile should block sessions that fail certificate validation to ensure that only trusted hosts are allowed." (Source: SSH Proxy Decryption Best Practices) Block connections using non-compliant SSH versions Older SSH versions may have vulnerabilities or lack modern encryption algorithms.
"To enforce stronger security, block SSH sessions that use older or deprecated versions of the SSH protocol that do not comply with your security posture." (Source: SSH Decryption and Best Practices) Together, these measuresminimize the risk of MITM attacksand secure SSH traffic.

NEW QUESTION # 48
When a firewall acts as an application-level gateway (ALG), what does it require in order to establish a connection?

- A. Pinholes
- B. Payload
- C. Dynamic IP and Port (DIPP)
- D. Session Initiation Protocol (SIP)

Answer: B

Explanation:
An ALG is designed toinspect and modify the payloadof application-layer protocols (like SIP, FTP, etc.) to manage dynamic port allocations and session information.
"Application Layer Gateways (ALGs) inspect the payload of certain protocols to dynamically manage sessions that use dynamic port assignments. By modifying payloads, the ALG ensures that NAT and security policies are correctly applied." (Source: ALG Support)

NEW QUESTION # 49
What must be configured to successfully onboard a Prisma Access remote network using Strata Cloud Manager (SCM)?

- A. Cloud Identity Engine
- B. IPSec termination node
- C. GlobalProtect agent
- D. Autonomous Digital Experience Manager (ADEM)

Answer: B

Explanation:
To connect aremote networkto Prisma Access via Strata Cloud Manager (SCM), the remote network requires anIPSec termination node. This acts as the VPN endpoint, ensuring secure connectivity between branch locations and Prisma Access.
"To onboard a remote network, configure the IPSec termination node on the customer's premises. This VPN endpoint establishes the secure tunnel to Prisma Access for traffic backhauling." (Source: Onboard Remote Networks) Key takeaway:
The IPSec termination node is fundamental for secure, encrypted connectivity.

NEW QUESTION # 50
How can a firewall administrator block a list of 300 unique URLs in the most time-efficient manner?

- A. Use application groups to block the App-IDs.
- B. Import the list into a custom URL category.
- C. Block multiple predefined URL categories.
- D. Use application filters to block the App-IDs.

Answer: B

Explanation:
For large lists of specific URLs, creating acustom URL categoryand importing the list is the most efficient approach for granular URL filtering.
"You can create custom URL categories to define specific URLs or patterns and enforce policies for these categories. This is the most efficient way to handle large sets of URLs." (Source: Custom URL Categories) This approach saves time compared to manual rule creation or using generic application filters.

NEW QUESTION # 51
.....

There are many methods to pass NetSec-Pro exam, but the method provided by our FreePdfDump can be the most efficient. You can quickly feel your ability has enhanced when you are using NetSec-Pro simulation software made by our IT elite. NetSec-Pro Exam will be updates every once in a while; to ensure you use the latest materials, we provide one-year free update of our software for you a that you can be rest assured to use it.
