To keep pace with the times, we believe science and technology can enhance the way people study. Especially in such a fast-pace living tempo, we attach great importance to high-efficient learning. Therefore, our NetSec-Pro study materials base on the past exam papers and the current exam tendency, and design such an effective simulation function to place you in the real exam environment. We promise to provide a high-quality simulation system with advanced NetSec-Pro Study Materials. With the simulation function, our NetSec-Pro training guide is easier to understand and pass the NetSec-Pro exam.

Like the Web-based Palo Alto Networks Network Security Professional practice exam, the Desktop NetSec-Pro practice test software of Actual4dump provides its valuable customers with NetSec-Pro test questions which are very similar to the actual Palo Alto Networks Network Security Professional exam questions. There is no hustle. The Palo Alto Networks Network Security Professional NetSec-Pro Practice Test material is updated and created after feedback from more than 90,000 professionals around the globe. A free demo of any Palo Alto Networks Network Security Professional exam dumps format will be provided by Actual4dump to the one who wants to assess before purchasing.

Clearer NetSec-Pro Explanation & New NetSec-Pro Dumps Sheet

Actual4dump is within your reach to obtain the top-rated Palo Alto Networks NetSec-Pro Exam Questions. And it guarantees that you will pass the NetSec-Pro certification exam on the maiden attempt. Several aspiring candidates have already heard about the prestigious Palo Alto Networks Network Security Professional NetSec-Pro Certification. But the real problem they face is their inability to find trustworthy, updated, and relevant Palo Alto Networks Network Security Professional NetSec-Pro exam practice tests that can assist them.

Palo Alto Networks Network Security Professional Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which GlobalProtect configuration is recommended for granular security enforcement of remote user device posture?

- A. Applying log at session end to all GlobalProtect Security policies
- B. Configuring host information profile (HIP) checks for all mobile users
- C. Implementing multi-factor authentication (MFA) for all users attempting to access internal applications

- D. Configuring a rule that blocks the ability of users to disable GlobalProtect while accessing internal applications

Answer: B

Explanation:

Host Information Profile (HIP) checks are used in GlobalProtect to collect and evaluate endpoint posture (OS, patch level, AV status) to enforce granular security policies for remote users.

"The HIP feature collects information about the host and can be used in security policies to enforce posture-based access control. This ensures only compliant endpoints can access sensitive resources." (Source: GlobalProtect HIP Checks) This enables fine-grained, context-aware access decisions beyond user identity alone.

NEW QUESTION # 37

Which offering can be managed in both Panorama and Strata Cloud Manager (SCM)?

- A. Autonomous Digital Experience Manager (ADEM)
- B. SaaS Security
- **C. VM-Series Next-Generation Firewall (NGFW)**
- D. Prisma SD-WAN

Answer: C

Explanation:

The VM-Series NGFWs are designed to integrate seamlessly with both Panorama and Strata Cloud Manager (SCM), allowing administrators to manage physical and virtual firewall deployments from either interface.

"You can manage VM-Series Next-Generation Firewalls using either Panorama for centralized management of all firewalls or Strata Cloud Manager for cloud-based management, giving flexibility across hybrid environments." (Source: VM-Series Management Options) Unified management flexibility is key for enterprises with hybrid or multi-cloud deployments.

NEW QUESTION # 38

Which action allows an engineer to collectively update VM-Series firewalls with Strata Cloud Manager (SCM)?

- **A. Creating a device grouping rule**
- B. Scheduling software update
- C. Creating an update grouping rule
- D. Setting a target OS version

Answer: A

Explanation:

Device grouping rules in SCM allow administrators to organize firewalls into logical groups and collectively manage updates or configuration pushes across those groups.

"SCM allows you to create device group rules, enabling streamlined management and collective updates of multiple NGFW instances." (Source: SCM Device Grouping) This approach ensures consistency in software versions and configuration baselines across large deployments.

NEW QUESTION # 39

A network security engineer has created a Security policy in Prisma Access that includes a negated region in the source address. Which configuration will ensure there is no connectivity loss due to the negated region?

- A. Add all regions that contain private IP addresses to the source address.
- B. Set the service to be application-default.
- C. Add a Dynamic Application Group to the Security policy.
- **D. Create a Security policy for the negated region with destination address "any".**

Answer: D

Explanation:

Negated source addresses exclude traffic from the specified region. To avoid accidental connectivity loss for traffic from that region,

create a separate Security policy to explicitly permit it.

"When you use a negated region in a Security policy rule, ensure to create an additional Security policy to permit traffic from the excluded (negated) region to avoid unintentional drops." (Source: Prisma Access Policy Best Practices) This ensures explicit inclusivity for the excluded region, maintaining reliable connectivity.

NEW QUESTION # 40

In a service provider environment, what key advantage does implementing virtual systems provide for managing multiple customer environments?

- A. Logical separation of control and Security policy
- B. Unified logging across all virtual systems
- C. Shared threat prevention policies across all tenants
- D. Centralized authentication for all customer domains

Answer: A

Explanation:

Virtual systems provide logical separation in a single physical firewall, allowing different customers (or tenants) to have isolated control and security policies.

"Virtual systems enable service providers to offer logically separated, independent environments on a single firewall. Each virtual system can have its own security policies, interfaces, and administrators." (Source: Virtual Systems) This ensures secure, tenant-specific segmentation within multi-tenant environments.

NEW QUESTION # 41
