

NetSec-Pro New Real Test - NetSec-Pro Vce Test Simulator

Many exam candidates feel hampered by the shortage of effective NetSec-Pro preparation quiz, and the thick books and similar materials causing burden for you. Serving as indispensable choices on your way of achieving success especially during this NetSec-Pro Exam, more than 98 percent of candidates pass the exam with our NetSec-Pro training guide and all of former candidates made measurable advance and improvement.

Candidates can benefit a lot if they can get the certificate of the exam: they can get a better job in a big company, and the wage will also promote. Our NetSec-Pro Training Material will help you to get the certificate easily by provide you the answers and questions. The questions and answers of the practicing materials is correct and the updated one, we will also update the version for you regularly, therefore, you can know the latest changes for the exam.

Unique, Full Length Exams - New Palo Alto Networks NetSec-Pro Praticce Exam

Most returned customers said that our NetSec-Pro dumps pdf covers the big part of main content of the certification exam. Questions and answers from our NetSec-Pro free download files are tested by our certified professionals and the accuracy of our questions are 100% guaranteed. Please check the free demo of NetSec-Pro Braindumps before purchased and we will send you the download link of NetSec-Pro real dumps after payment.

Palo Alto Networks Network Security Professional Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which two SSH Proxy decryption profile settings should be configured to enhance the company's security posture? (Choose two.)

- A. Block sessions when certificate validation fails.
- B. Block connections that use non-compliant SSH versions.

- C. Allow sessions when decryption resources are unavailable.
- D. Allow sessions with legacy SSH protocol versions.

Answer: A,B

Explanation:

Blocking non-compliant SSH versions and failing certificate validations are fundamental security measures:

Block sessions when certificate validation fails

"The SSH Proxy profile should block sessions that fail certificate validation to ensure that only trusted hosts are allowed." (Source: SSH Proxy Decryption Best Practices) Block connections using non-compliant SSH versions Older SSH versions may have vulnerabilities or lack modern encryption algorithms.

"To enforce stronger security, block SSH sessions that use older or deprecated versions of the SSH protocol that do not comply with your security posture." (Source: SSH Decryption and Best Practices) Together, these measures minimize the risk of MITM attacks and secure SSH traffic.

NEW QUESTION # 33

An NGFW administrator is updating PAN-OS on company data center firewalls managed by Panorama. Prior to installing the update, what must the administrator verify to ensure the devices will continue to be supported by Panorama?

- A. All devices are in the same template stack.
- B. Panorama is configured as the primary device in the log collecting group for the data center firewalls.
- C. Panorama is running the same or newer PAN-OS release as the one being installed.
- D. Device telemetry is enabled.

Answer: C

Explanation:

The firewall must be running a PAN-OS version that is supported by Panorama. This means that Panorama must be running the same or a newer PAN-OS version as the one being installed on the firewalls to maintain compatibility.

"Before you upgrade the firewall, ensure that Panorama is running the same or a later PAN-OS version than the firewall. Panorama must always be at the same or a higher version to maintain compatibility." (Source: Panorama Admin Guide - Upgrade Process)

NEW QUESTION # 34

What key capability distinguishes Content-ID technology from conventional network security approaches?

- A. It provides single-pass application layer inspection for real-time threat prevention.
- B. It performs packet header analysis short of deep packet inspection.
- C. It relies primarily on reputation-based filtering.
- D. It exclusively monitors network traffic volumes.

Answer: A

Explanation:

Content-ID is the core of Palo Alto Networks' prevention architecture, providing single-pass application layer inspection to deliver real-time threat prevention across all traffic.

"Content-ID uses a single-pass architecture to perform application-layer (Layer 7) traffic inspection and real-time threat prevention. Unlike traditional firewalls that rely on multiple scans, Content-ID inspects traffic once to enforce multiple security controls simultaneously." (Source: Content-ID Overview) By consolidating security functions in a single pass, it ensures both efficiency and comprehensive security.

NEW QUESTION # 35

Which functionality does an NGFW use to determine whether new session setups are legitimate or illegitimate?

- A. Random Early Detection (RED)
- B. SYN cookies
- C. SYN bit
- D. SYN flood protection

Answer: B

Explanation:

To prevent SYN flood attacks, the NGFW uses SYN cookies to validate legitimate session establishment.

"SYN cookies allow the firewall to verify the legitimacy of new session requests without allocating resources until the handshake is completed. This prevents SYN flood attacks from exhausting system resources." (Source: Flood Protection Best Practices) SYN cookies mitigate resource exhaustion by ensuring only legitimate connections are established.

NEW QUESTION # 36

A network administrator obtains Palo Alto Networks Advanced Threat Prevention and Advanced DNS Security subscriptions for edge NGFWs and is setting up security profiles. Which step should be included in the initial configuration of the Advanced DNS Security service?

- **A. Configure DNS Security signature policy settings to sinkhole malicious DNS queries.**
- B. Create a decryption policy rule to decrypt DNS-over-TLS / port 853 traffic.
- C. Enable Advanced Threat Prevention with default settings and only focus on high-risk traffic.
- D. Create overrides for all company owned FQDNs.

Answer: A

Explanation:

Advanced DNS Security uses a signature policy to sinkhole malicious DNS queries and prevent them from resolving.

"The DNS Security service integrates with Anti-Spyware profiles, and you must configure signature policy settings to sinkhole malicious queries. This proactively stops traffic to known malicious domains." (Source: Configure DNS Security) Sinkholing ensures that DNS queries to malicious FQDNs are redirected to a safe IP, preventing compromise.

NEW QUESTION # 37

.....

Our NetSec-Pro guide questions boost many advantages and varied functions. You can have a free download and tryout of our product before the purchase and our purchase procedures are safe. Our software carries no viruses and we provide 3 versions for you to choose. You need little time to learn the NetSec-Pro Exam Torrent and prepare the exam. Our passing rate and the hit rate is very high. After you pass the exam you will gain a lot of benefits such as enter in the big company and double your wage.
