NSK300 Test Practice - Exam NSK300 Papers

Doubtlessly, clearing the NSK300 certification exam is a challenging task. You can make this task considerably easier by studying with actual Netskope Certified Cloud Security Architect (NSK300) Questions of VCEDumps. We provide you with a triple-formatted NSK300 Practice Test material, made under the supervision of experts. This product has everything you need to clear the challenging NSK300 exam in one go.

Netskope Certified Cloud Security Architect Sample Questions (Q14-Q19):

NEW QUESTION # 14
Users in your network are attempting to reach a website that has a self-signed certificate using a GRE tunnel to Netskope. They are currently being blocked by Netskope with an SSL error. How would you allow this traffic?

- A. Ensure that the users add the self-signed certificate to their local certificate store.
- B. Configure a Real-time Protection policy with the action set to Allow.
- C. Configure a Do Not Decrypt SSL Decryption rule to allow traffic to pass.
- D. Set the No SNI setting in Netskope to Bypass.

Answer: C

NEW QUESTION # 15
You do not want a scheduled Advanced Analytics dashboard to be automatically updated when Netskope makes improvements to that dashboard. In this scenario, what would you do to retain the original dashboard?

- A. Create a new dashboard from scratch that mimics the Netskope dashboard you want to use.
- B. Ask Netskope Support to provide the dashboard and import into your Personal folder.
- C. Download the dashboard you want and Import from File into your Group or Personal folder.
- D. Copy the dashboard into your Group or Personal folders and schedule from these folders.

Answer: C

Explanation:
To retain the original dashboard without automatic updates due to improvements made by Netskope, you can download the desired dashboard and then import it from a file into your Group or Personal folder.
This approach ensures that you have a static version of the dashboard that won't be affected by future changes or enhancements.
Reference:
The answer is based on general knowledge of dashboard management and customization within Netskope.

NEW QUESTION # 16
You are using Netskope CSPM for security and compliance audits across your multi-cloud environments. To decrease the load on the security operations team, you are researching how to auto-re mediate some of the security violations found in low-risk environments.
Which statement is correct in this scenario?

- A. You can use Netskope Cloud Exchange for auto-remediation of security violation results.
- B. You can use Netskope API-enabled Protection for auto-remediation of security violation results.
- C. You can use Netskope Auto-remediation frameworks from the public Netskope GitHub Open Source repository for auto-re mediation of security violation results.
- D. Netskope does not support automatic remediation of security violation results due to the high risk associated with it.

Answer: C

Explanation:
Netskope supports automatic remediation of security violations through its Auto-Remediation frameworks, which are available in the public Netskope GitHub Open Source repository. These frameworks allow for the automatic mitigation of risks associated with security misconfigurations in your cloud environment. The Netskope Auto-Remediation framework for AWS, for example, deploys a set of AWS Lambda functions that query the Netskope API at scheduled intervals and automatically mitigates supported violations1. Similarly, there are frameworks for GCP and other cloud environments that follow the same principle2. This capability is particularly useful for low-risk environments where the security operations team's workload can be reduced by automating the remediation process.

NEW QUESTION # 17

Your client is an NG-SWG customer. They are going to use the Explicit Proxy over Tunnel (EPoT) steering method. They have a specific list of domains that they do not want to steer to the Netskope Cloud.
What would accomplish this task"

- A. Define exception domains in the PAC file.
- B. Create a real-time policy with a bypass action.
- C. Define exceptions in the Netskope steering configuration
- D. Use an SSL decryption policy.

Answer: A

Explanation:
To accomplish the task of not steering specific domains to the Netskope Cloud while using the Explicit Proxy over Tunnel (EPoT) steering method, you woulddefine exception domains in the PAC file (A).This is because the PAC file is used to specify which domains should bypass the proxy and connect directly, thus allowing for granular control over the traffic that is steered to Netskope1.
The use of PAC files for steering exceptions is a standard practice in proxy configurations and is supported by Netskope's EPoT steering method as outlined in their documentation1.

NEW QUESTION # 18

What is a Fast Scan component of Netskope Threat Detection?

- A. Statical Analysis
- B. Heuristic Analysis
- C. Dynamic Analysis
- D. Machine Learning

Answer: D

Explanation:
The Fast Scan component of Netskope Threat Detection utilizes Machine Learning to quickly detect and block malware in real-time. This is part of Netskope's multi-layered security approach, which includes various engines to defend against a wide range of threats. The Fast Scan capability specifically leverages machine learning-based detection for rapid analysis and response to potential threats1.

NEW QUESTION # 19

......

NSK300 provides actual NSK300 Exam Questions to help candidates pass on the first try, ultimately saving them time and resources. These questions are of the highest quality, ensuring success for those who use them. To achieve success, it's crucial to have access to quality Netskope Certified Cloud Security Architect (NSK300) exam dumps and to prepare for the likely questions that will appear on the exam. NSK300 helps candidates overcome any difficulties they may face in exam preparation, with a 24/7 support team ready to assist with any issues that may arise.
