WGU Network-and-Security-Foundation Sample Questions (Q14-Q19):

NEW QUESTION # 14

Which layer of the OSI model includes the ICMP?

- A. Transport
- B. Application
- C. Session
- **D. Network**

Answer: D

Explanation:

The Network layer (Layer 3 of the OSI model) includes the Internet Control Message Protocol (ICMP), which is used for network diagnostics (e.g., ping command). ICMP helps in error reporting and network troubleshooting.

* Transport layer handles reliable data delivery (e.g., TCP, UDP).

* Session layer manages communication sessions.

* Application layer provides end-user services.

NEW QUESTION # 15

Which component of the IT security CIA triad is a driver for enabling data encryption?

- **A. Confidentiality**
- B. Application
- C. Integrity
- D. Availability

Answer: A

Explanation:

Confidentiality ensures that sensitive information is protected from unauthorized access. Encryption is a key mechanism used to maintain confidentiality by converting readable data into a secure format that can only be accessed with a decryption key.

* Integrity ensures data is not altered improperly but does not directly relate to encryption.

* Availability focuses on system uptime and accessibility.

* Application is not a component of the CIA triad.

NEW QUESTION # 16

An organization does not have controls in place to limit employee access to sensitive customer data.

What is a component of the CIA triad that is violated?

- **A. Confidentiality**
- B. Interpretation
- C. Integrity
- D. Availability

Answer: A

Explanation:

Confidentiality ensures that only authorized users have access to sensitive information. Without proper access controls, employees may be able to view or modify sensitive data without proper authorization, leading to a confidentiality breach.

* Integrity involves protecting data from unauthorized modifications.

* Availability ensures that systems remain operational.

* Interpretation is not part of the CIA triad.

NEW QUESTION # 17

A person is troubleshooting a network issue and needs to see a list of all active network connections.

Which Linux command should be used?

- A. netstat
- B. ifconfig
- C. dig
- D. nslookup

Answer: A

Explanation:

The netstat command in Linux displays active network connections, listening ports, and network statistics. It is useful for diagnosing network issues and identifying open connections.

* nslookup is for DNS queries.

* dig provides DNS information, not network connection status.

* ifconfig shows network interface details but does not list active connections.

NEW QUESTION # 18

An attacker changes a computer's identification to appear as an authorized computer in a target network.

Which type of cyberattack is described?

- A. Pharming
- B. IP address spoofing
- C. Man-in-the-middle attack
- D. Session hijacking

Answer: B

Explanation:

IP address spoofing is a cyberattack where an attacker disguises their system by falsifying its IP address, making it appear as a trusted device in a network. This technique is used for bypassing security controls, launching denial-of-service (DoS) attacks, or impersonating legitimate users.

* Pharming directs users to fake websites to steal credentials.

* Man-in-the-middle attack intercepts communications between two parties.

* Session hijacking takes over an active session but does not involve falsifying an IP address.
