Latest Network-and-Security-Foundation Test Training Materials Will

Update Constantly - TrainingQuiz

For a long time, our company is insisting on giving back to our customers on the Network-and-Security-Foundation study materials. Also, we have benefited from such good behavior. Our Network-and-Security-Foundation exam prep has gained wide popularity among candidates. Every worker in our company sticks to their jobs all the time. No one complain about the complexity of their jobs. Our researchers and experts are working hard to develop the newest version of the Network-and-Security-Foundation learning guide.

WGU Network-and-Security-Foundation Sample Questions (Q51-Q56):

NEW QUESTION # 51

A company wants to implement virtual machines with a focus on security and efficiency. Which type of hypervisor fits the need described in the scenario?

- A. Proprietary
- B. Open source
- C. Type 2
- **D. Type 1**

Answer: D

Explanation:

A Type 1 hypervisor (bare-metal hypervisor) runs directly on the hardware, providing better security and efficiency compared to Type 2 hypervisors. It reduces attack surfaces and optimizes resource utilization. Examples include VMware ESXi and Microsoft Hyper-V.

* Type 2 hypervisors rely on a host OS, making them less secure and efficient.

* Open-source and proprietary describe licensing models, not hypervisor types.

NEW QUESTION # 52

After recently experiencing a security breach, a company is working on improving its database security. As a part of its security governance strategies, the company is developing a database security checklist. Which component is important to include in this checklist?

- A. Developing algorithms for secure access to data
- **B. Restricting physical access to locations where data is housed**
- C. Outsourcing data management to third-party vendors
- D. Disclosing any instances of breaches of personal data

Answer: B

Explanation:

Restricting physical access to data storage facilities is a critical part of database security. Even with strong cybersecurity measures, unauthorized physical access to servers can lead to breaches. Security strategies include biometric authentication, surveillance cameras, and restricted entry zones.

* Disclosing breaches is required by compliance laws but does not protect data proactively.

* Developing algorithms improves security but is not a fundamental checklist item.

* Outsourcing data management can introduce security risks if not properly controlled.

NEW QUESTION # 53

Which layer of the OSI model includes the ICMP?

- A. Transport
- **B. Network**
- C. Application
- D. Session

Answer: B

Explanation:

The Network layer (Layer 3 of the OSI model) includes the Internet Control Message Protocol (ICMP), which is used for network diagnostics (e.g., ping command). ICMP helps in error reporting and network troubleshooting.

- * Transport layer handles reliable data delivery (e.g., TCP, UDP).
- * Session layer manages communication sessions.
- * Application layer provides end-user services.

NEW QUESTION # 54

An attacker issues commands to access a file on a network drive and overwrite it with new data. What is the purpose of the attack?

- **A. Data modification**
- B. Data export
- C. Denial of availability
- D. Launch point

Answer: A

Explanation:

Data modification attacks involve unauthorized changes to stored data, altering information to mislead, disrupt, or destroy integrity. Attackers may modify logs, transactions, or records for fraud or sabotage.

- * Launch point is when a system is used to attack others.
- * Data export is the theft of data.
- * Denial of availability makes data inaccessible, but does not necessarily modify it.

NEW QUESTION # 55

A person is troubleshooting a network issue and needs to see a list of all active network connections. Which Linux command should be used?

- A. nslookup
- B. ifconfig
- C. dig
- **D. netstat**

Answer: D

Explanation:

The netstat command in Linux displays active network connections, listening ports, and network statistics. It is useful for diagnosing network issues and identifying open connections.

- * nslookup is for DNS queries.
- * dig provides DNS information, not network connection status.
- * ifconfig shows network interface details but does not list active connections.

NEW QUESTION # 56

.....

We are aimed to improve customer satisfaction and always put customers first. Our experts check daily whether there is an update to the Network-and-Security-Foundation torrent prep, and if there is an update system, we will automatically send it to you. So it can guarantee latest knowledge and keep up with the pace of change. Many people are worried that online shopping electronics have viruses. But you don't have to worry about our products. Our Network-and-Security-Foundation Exam Questions are absolutely safe and virus-free. If you have any questions during the installation process, we will arrange professional staff on guidance of your installation and use. We always put your needs first.
