Hilfsreiche Prüfungsunterlagen verwirklicht Ihren Wunsch nach der Zertifikat der Certificate of the Business Continuity Institute (CBCI)

Wenn Sie in kurzer Zeit mit weniger Mühe sich ganz effizient auf die BCI CBCI Zertifizierungsprüfung vorbereiten, benutzen Sie doch schnell die Schulungsunterlagen zur BCI CBCI Zertifizierungsprüfung. Sie werden von der Praxis bewährt. Viele Kandidaten haben bewiesen, dass man mit der Hilfe von ExamFragen die Prüfung 100% bestehen können. Mit ExamFragen können Sie Ihr Ziel erreichen und die beste Effekte erzielen.

BCI Certificate of the Business Continuity Institute (CBCI) CBCI

Prüfungsfragen mit Lösungen (Q20-Q25):

20. Frage

Which of the following solutions in the context of building and work environment resources would support a strategy of relocating operations to another work area belonging to the organization should an incident occur?

- A. Create a separate supply chain to support the alternative site in the case of an incident occurring
- **B. Re-purpose work areas and facilities to enable working arrangements for organization personnel during a disruption**
- C. Contract former employees and contractors to undertake work at the replacement during a disruption
- D. Advise personnel that they will have to work around the existing workstations and equipment in the alternative site as it will be an emergency situation

Antwort: B

Begründung:

The CBCI 7.0 course outlines that a key solution to support relocation strategies involves re-purposing existing work areas and facilities to accommodate essential personnel and functions during disruptions. This may involve modifying spaces, reallocating equipment, or adapting layouts to maintain operations efficiently.

Such pre-planning ensures that the organization can resume activities quickly and safely. Contracting former employees or creating separate supply chains may assist but are secondary to establishing viable physical environments. Expecting personnel to adapt to unprepared facilities risks inefficiency and morale issues.

Proactive adaptation of workspace is a cornerstone of effective relocation strategies.

21. Frage

When developing solutions for people strategies, solutions to recover activities with a short Recovery Time Objective (RTO) requiring redeployment of personnel should be supported by:

- A. Induction and training by an operational manager at the time when the disruption is underway so that individuals can build understanding and confidence prior to commencing the allocated tasks
- B. Links to social media so the organization can run an extensive recruitment campaign both inside and outside the organization if a disruptive event occurs
- **C. The development of training material including all relevant information and procedures so that this can be made available when required**
- D. Recruitment of additional personnel so that the organization always has access to surplus staff in case of an incident occurring

Antwort: C

Begründung:

Short RTOs necessitate rapid recovery actions that often require personnel to perform tasks they may not usually undertake. The CBCI 7.0 course outlines that providing accessible, comprehensive training materials in advance ensures personnel can quickly familiarize themselves with necessary procedures during a disruption. This proactive preparation supports redeployment without delay, building confidence and reducing errors. While recruitment and on-the-fly training are options, relying on real-time induction is risky and can delay recovery. Social media recruitment is impractical during crises due to time constraints.

Preparedness through training material is key for agility.

22. Frage

In relation to Solutions Design, a gap analysis is used to determine whether:

- A. The organization is performing at its optimum financial level
- B. Personnel are embracing Business Continuity sufficiently well to deliver Business Continuity requirements
- **C. New strategies and solutions are in order to meet Business Continuity requirements**
- D. The results of an external audit are justified in terms of internal evidence of Business Continuity achievements

Antwort: C

Begründung:

A gap analysis is a critical evaluation tool used in the Solutions Design phase to identify differences between existing Business Continuity capabilities and what is required to achieve organizational resilience. The CBCI 7.0 course specifies that this analysis determines if new or revised strategies and solutions are needed to meet Business Continuity requirements effectively. By comparing current states with desired outcomes, the gap analysis highlights areas lacking adequate controls, resources, or processes. It drives decision-making for prioritizing improvements and investments in continuity measures. This systematic assessment ensures that Business Continuity strategies are fit for purpose and aligned with evolving risks and business objectives. It is not focused on financial performance or audit justifications but on actionable capability enhancements. Reference: CBCI 7.0 Study Guide, Module 5: Solutions Design and Gap Analysis, pages 95-99.

23. Frage

In order to enable Business Continuity solutions, it is necessary to:

- A. Carry out a review of the Business Continuity policy to ensure that it is updated with the detail of the agreed solutions
- **B. Establish and implement a strategy to ensure that business objectives are aligned to the agreed solutions**
- C. Measure capabilities to deliver the solutions by carrying out a gap analysis
- D. Create guidance documents that detail response activities and procedures that specific teams need to follow

Antwort: B

Begründung:

The CBCI 7.0 course emphasizes that establishing and implementing a strategy aligned with business objectives is fundamental to enabling Business Continuity solutions. Business Continuity solutions must not only be technically sound but also directly support the organization's goals and priorities. Alignment ensures that continuity efforts contribute meaningfully to sustaining critical operations and delivering value during and after disruptions. This strategic approach drives resource allocation, prioritizes recovery efforts, and integrates continuity planning into broader organizational frameworks. While gap analyses, guidance documents, and policy reviews support solution enablement, without strategic alignment solutions risk being disconnected from business needs and may fail to gain management support or achieve desired outcomes.

Reference: CBCI 7.0 Study Guide, Module 5: Enabling and Implementing Solutions, pages 98-101.

24. Frage

An example of regularly planned ongoing maintenance of the Business Continuity Management System (BCMS) is:

- A. Taking corrective actions to revise the Business Continuity plan after an actual incident
- **B. Performing a check of backup equipment at the alternate site on a monthly basis**
- C. Examining with department heads the performance of their systems following near misses
- D. Making changes to the evacuation procedures after an emergency building evacuation demonstrates the procedures include unexpected risks

Antwort: B

Begründung:

The CBCI 7.0 course highlights that regularly scheduled maintenance activities, such as monthly checks of backup equipment, are essential for ensuring that Business Continuity resources remain operational and ready for use. Such preventative maintenance helps detect failures before incidents occur, supporting system reliability. While corrective actions and reviews following incidents or near misses are important, ongoing, planned maintenance is the proactive foundation of system resilience. Evacuation procedure changes are reactive and part of continual improvement, but routine equipment checks represent essential planned maintenance.
