

New 100-150 Exam Question - 100-150 Valid Vce Dumps

P.S. Free & New 100-150 dumps are available on Google Drive shared by ValidExam: <https://drive.google.com/open?id=1RmaCtcOKUHJ0VFJatFXfMDmMqfnfPdQ>

What happens when you are happiest? It must be the original question! The hit rate of 100-150 study materials has been very high for several reasons. Our company has collected the most comprehensive data and hired the most professional experts to organize. They are the most authoritative in this career. At the same time, we are very concerned about social information and will often update the content of our 100-150 Exam Questions.

ValidExam is a reliable study center providing you the valid and correct 100-150 questions & answers for boosting up your success in the actual test. 100-150 PDF file is the common version which many candidates often choose. If you are tired with the screen for study, you can print the 100-150 Pdf Dumps into papers. With the pdf papers, you can write and make notes as you like, which is very convenient for memory. We can ensure you pass with Cisco study torrent at first time.

>> New 100-150 Exam Question <<

Realistic New 100-150 Exam Question, Ensure to pass the 100-150 Exam

Various study forms are good for boosting learning interests. So our company has taken all customers' requirements into account. Some people are not good at operating computers. So you might worry about that the 100-150 certification materials are not suitable for you. Try to believe us. Our experts have taken your worries seriously. They have made it easy to operate for all people. Even if you know little about computers, you can easily begin to do exercises of the 100-150 Real Exam dumps.

Cisco Certified Support Technician (CCST) Networking Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which address is included in the 192.168.200.0/24 network?

- A. 192.168.200.13
- B. 192.168.1.13
- C. 192.168.199.13

- D. 192.168.201.13

Answer: A

Explanation:

* 192.168.200.0/24 Network: This subnet includes all addresses from 192.168.200.0 to 192.168.200.255.

The /24 indicates a subnet mask of 255.255.255.0, which allows for 256 addresses.

* 192.168.199.13: This address is in the 192.168.199.0/24 subnet, not the 192.168.200.0/24 subnet.

* 192.168.200.13: This address is within the 192.168.200.0/24 subnet.

* 192.168.201.13: This address is in the 192.168.201.0/24 subnet, not the 192.168.200.0/24 subnet.

* 192.168.1.13: This address is in the 192.168.1.0/24 subnet, not the 192.168.200.0/24 subnet.

NEW QUESTION # 45

A support technician examines the front panel of a Cisco switch and sees 4 Ethernet cables connected in the first four ports. Ports 1, 2, and 3 have a green LED. Port 4 has a blinking green light.

What is the state of the Port 4?

- A. Link is up and there is no activity.
- B. Link is up with cable malfunctions.
- C. Link is up and not stable.
- **D. Link is up and active.**

Answer: D

Explanation:

On a Cisco switch, a port with a blinking green LED typically indicates that the port is up (active) and is currently transmitting or receiving data. This is a normal state indicating active traffic on the port.

*A. Link is up with cable malfunctions: Usually indicated by an amber or blinking amber light.

*B. Link is up and not stable: Not typically indicated by a green blinking light.

*D. Link is up and there is no activity: Would be indicated by a solid green light without blinking.

Thus, the correct answer is C. Link is up and active.

NEW QUESTION # 46

In the network shown in the following graphic, Switch1 is a Layer 2 switch.

PC-A sends a frame to PC-C. Switch1 does not have a mapping entry for the MAC address of PC-C. Which action does Switch1 take?

- A. Switch1 drops the frame and sends an error message back to PC-
- B. Switch1 sends an ARP request to obtain the MAC address of PC-
- C. Switch1 floods the frame out all active ports except port G0/1.
- D. Switch1 queries Switch2 for the MAC address of PC-C.

Answer: A

Explanation:

In a network, when a Layer 2 switch (like Switch1) receives a frame destined for a MAC address that is not in its MAC address table, it performs a flooding operation. This means the switch will send the frame out of all ports except the port on which the frame was received. This flooding ensures that if the destination device is connected to one of the other ports, it will receive the frame and respond, allowing the switch to learn its MAC address.

A). Switch1 queries Switch2 for the MAC address of PC-C: This does not happen in Layer 2 switches; they do not query other switches for MAC addresses.

A). Switch1 drops the frame and sends an error message back to PC-A: This is not the default behavior for unknown unicast frames.

D). Switch1 sends an ARP request to obtain the MAC address of PC-C: ARP is used by devices to map IP addresses to MAC addresses, not by switches to find unknown MAC addresses.

Thus, the correct answer is

B). Switch1 floods the frame out all active ports except port G0/1.

NEW QUESTION # 47

Which two pieces of information should you include when you initially create a support ticket? (Choose 2.)

- A. The description of the top-down fault-finding procedure
- B. The actions taken to resolve the fault

- C. Details about the computers connected to the network
- D. A description of the conditions when the fault occurs
- E. A detailed description of the fault

Answer: D,E

Explanation:

* Statement A: "A detailed description of the fault." This is essential for support staff to understand the nature of the problem and begin troubleshooting effectively.

* Statement C: "A description of the conditions when the fault occurs." This helps in reproducing the issue and identifying patterns that might indicate the cause of the fault.

* Statement B: "Details about the computers connected to the network." While useful, this is not as immediately critical as understanding the fault itself and the conditions under which it occurs.

* Statement D: "The actions taken to resolve the fault." This is important but typically follows the initial report.

* Statement E: "The description of the top-down fault-finding procedure." This is more of a troubleshooting methodology than information typically included in an initial support ticket.

NEW QUESTION # 48

HOTSPOT

You purchase a new Cisco switch, turn it on, and connect to its console port. You then run the following command:

```
#show running-config | section include interface
interface GigabitEthernet0/1
!
interface GigabitEthernet0/2
!
<output omitted>
```

For each statement about the output, select True or False. Note: You will receive partial credit for each correct selection.

	True	False
The two interfaces are administratively shut down.	<input type="radio"/>	<input type="radio"/>
The two interfaces have default IP addresses assigned.	<input type="radio"/>	<input type="radio"/>
The two interfaces can communicate over Layer 2.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

	True	False
The two interfaces are administratively shut down.	<input type="radio"/>	<input checked="" type="radio"/>
The two interfaces have default IP addresses assigned.	<input type="radio"/>	<input checked="" type="radio"/>
The two interfaces can communicate over Layer 2.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

The two interfaces are administratively shut down:

False: The output does not show any "shutdown" command under the interfaces, which would indicate that they are administratively

shut down. Therefore, they are likely in their default state, which is administratively up.

The two interfaces have default IP addresses assigned:

False: The output does not show any IP address configuration. In the default state, interfaces do not have IP addresses assigned unless explicitly configured.

The two interfaces can communicate over Layer 2:

True: By default, interfaces on a switch are Layer 2 interfaces capable of forwarding Ethernet frames. As there is no configuration provided that changes this, it can be assumed they can communicate over Layer 2.

Interface Status: The absence of the "shutdown" command means the interfaces are not administratively shut down.

IP Address Assignment: There is no evidence in the output that IP addresses have been assigned to the interfaces, which would typically be shown as "ip address" entries.

Layer 2 Communication: Switch interfaces in their default state operate at Layer 2, enabling them to forward Ethernet frames and participate in Layer 2 communication.
