

New 100-150 Test Questions & 100-150 Latest Exam Vce

Top 150 Questions & Answers

1. To register a vehicle in New Jersey, you must be age ____ or older.

> 17

To register a motor vehicle in New Jersey, you must be at least 17 years old. You must have proof of identity and proof of vehicle ownership.

2. You may avoid a traffic signal by driving on public or private property:

> If an officer directs you to do so.

It is a traffic violation to operate a motor vehicle on public or private property to avoid a traffic control signal or sign unless an officer directs traffic to do so.

3. The Implied Consent Law:

> Means drivers consent to a breath test when suspected of drinking and driving.

The Implied Consent Law means that, by driving on New Jersey roads, you are giving your consent to undergo a breath test if you are arrested for an alcohol-related offense.

4. A five-ounce glass of wine contains the same amount of alcohol as:

> One 12-ounce can of beer.

It is important to remember that the average beer contains about the same amount of alcohol as the average drink of whiskey or wine. A five-ounce glass of wine (12 percent alcohol), a 12-ounce can or bottle of beer, and 1.5 ounces of 86-proof liquor all contain approximately the same amount of alcohol. A person's ability to drive will be equally impaired by the same amount of alcohol no matter what kind of alcoholic beverage they drink.

Utilizing New 100-150 Test Questions - No Worry About Cisco Certified Support Technician (CCST) Networking

This is a gainful opportunity to choose 100-150 actual exam from our company. They are saleable offerings from our responsible company who dedicated in this line over ten years which helps customers with desirable outcomes with the help of our 100-150

Study Guide. Up to now, there are three versions of 100-150 exam materials for your reference. They are PDF, software and app versions. And we have free demos for you to download before you decide to purchase.

Cisco Certified Support Technician (CCST) Networking Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which two pieces of information should you include when you initially create a support ticket? (Choose 2.)

- A. A detailed description of the fault
- B. A description of the conditions when the fault occurs
- C. The description of the top-down fault-finding procedure
- D. The actions taken to resolve the fault
- E. Details about the computers connected to the network

Answer: A,B

Explanation:

Statement A: "A detailed description of the fault." This is essential for support staff to understand the nature of the problem and begin troubleshooting effectively.

Statement C: "A description of the conditions when the fault occurs." This helps in reproducing the issue and identifying patterns that might indicate the cause of the fault.

Statement B: "Details about the computers connected to the network." While useful, this is not as immediately critical as understanding the fault itself and the conditions under which it occurs.

Statement D: "The actions taken to resolve the fault." This is important but typically follows the initial report.

Statement E: "The description of the top-down fault-finding procedure." This is more of a troubleshooting methodology than information typically included in an initial support ticket.

NEW QUESTION # 32

How does low bandwidth affect network performance?

- A. Decreases latency
- B. Increases latency
- C. Increases throughput
- D. Has no effect on latency

Answer: B

NEW QUESTION # 33

Which address is included in the 192.168.200.0/24 network?

- A. 192.168.199.13
- B. 192.168.201.13
- C. 192.168.200.13
- D. 192.168.1.13

Answer: C

Explanation:

* 192.168.200.0/24 Network: This subnet includes all addresses from 192.168.200.0 to 192.168.200.255.

The /24 indicates a subnet mask of 255.255.255.0, which allows for 256 addresses.

* 192.168.199.13: This address is in the 192.168.199.0/24 subnet, not the 192.168.200.0/24 subnet.

* 192.168.200.13: This address is within the 192.168.200.0/24 subnet.

* 192.168.201.13: This address is in the 192.168.201.0/24 subnet, not the 192.168.200.0/24 subnet.

* 192.168.1.13: This address is in the 192.168.1.0/24 subnet, not the 192.168.200.0/24 subnet.

NEW QUESTION # 34

A user reports that a company website is not available. The help desk technician issues a tracert command to determine if the server hosting the website is reachable over the network. The output of the command is shown as follows:

```
C:\>tracert 192.168.1.10
Tracing route to 192.168.1.10 over a maximum of 30 hops:
 0 ms  0 ms  1 ms  192.168.5.1
 1 ms  0 ms  0 ms  10.0.1.1
 3 *    *    *    Request timed out.
 1 ms  1 ms  0 ms  10.0.0.2
 1 ms  1 ms  0 ms  192.168.1.10
```

What can you tell from the command output?

- A. Requests to the web server at 192.168.1.10 are being delayed and time out.
- B. The server address 192.168.1.10 is being blocked by a firewall on the router at hop 3.
- C. The router at hop 3 is not forwarding packets to the IP address 192.168.1.10.
- **D. The server with the address 192.168.1.10 is reachable over the network.**

Answer: D

Explanation:

The tracert command output shows the path taken to reach the destination IP address, 192.168.1.10. The command output indicates:

*Hops 1 and 2 are successfully reached.

*Hop 3 times out, meaning the router at hop 3 did not respond to the tracert request. However, this does not necessarily indicate a problem with forwarding packets, as some routers may be configured to block or not respond to ICMP requests.

*Hops 4 and 5 are successfully reached, with hop 5 being the destination IP 192.168.1.10, indicating that the server is reachable.

Thus, the correct answer is C. The server with the address 192.168.1.10 is reachable over the network.

References :=

*Cisco Traceroute Command

*Understanding Traceroute

The tracert command output indicates that the server with the address 192.168.1.10 is reachable over the network. The asterisk (*) at hop 3 suggests that the probe sent to that hop did not return a response, which could be due to a variety of reasons such as a firewall blocking ICMP packets or the router at that hop being configured not to respond to ICMP requests. However, since the subsequent hops (4 and 5) are showing response times, it means that the packets are indeed getting through and the server is reachable.

NEW QUESTION # 35

An app on a user's computer is having problems downloading data. The app uses the following URL to download data:

<https://www.companypro.net:7100/api>

You need to use Wireshark to capture packets sent to and received from that URL.

Which Wireshark filter options would you use to filter the results? Complete the command by selecting the correct option from each drop-down list.

Note: You will receive partial credit for each correct selection.

Answer:

Explanation:

Explanation:

To capture packets sent to and received from the URL <https://www.companypro.net:7100/api> using Wireshark, you would use the following filter options:

- * Protocol: tcp
- * Filter Type: port
- * Port Number: 7100

This filter setup in Wireshark will display all TCP packets that are sent to or received from port 7100, which is the port specified in the URL for the API service. Since HTTPS typically uses TCP as the transport layer protocol, filtering by TCP and the specific port number will help isolate the relevant packets for troubleshooting the app's data download issues.

- * cp: The app is using HTTPS, which relies on the TCP protocol for communication.
- * port: The specific port number used by the application, which in this case is 7100.
- * 7100: This is the port specified in the URL (<https://www.companypro.net:7100/api>).

This filter will capture all TCP traffic on port 7100, allowing you to analyze the packets related to the application's data download.
