databases, simplify switchovers and failovers, and automate failover processes to a specified target standby database. It offers a comprehensive view and control over the Data Guard configuration, making complex operations more manageable. DGMGRL is a command-line tool specifically designed for managing Data Guard configurations. It allows the administration of multiple standby databases, simplifies the execution of switchovers and failovers, reinstatements, and conversions to and from snapshot standby databases, and supports the automation of failover processes to a specified standby database. Other options like RMAN, SQL*Plus, CRSCTL, SRVCTL, and GDCCTL do not provide the same level of integrated management functionality for Data Guard environments as Enterprise Manager Cloud Control and DGMGRL.

Question: 4

The Oracle database 15c Observer is currently running on host1 and you wish to have it running on host2.

Examine this list of possible steps:

- 1) Stop the observer on host1
- 2) Disable Fast-Start Failover
- 3) Update the broker configuration with the new observer hostname
- 4) Enable Fast-Start Failover
- 5) Start the Observer on host2

Which contains the minimum required steps to move the observer to host2?

- A. Execute tasks 1 and 5
- B. Execute only task 5
- C. Execute tasks 1, 3, and 5
- D. Execute tasks 1, 2, 3, 4, and 5

Answer: C

Explanation:

Stop the Observer on host1 to ensure that there are no conflicts between the instances of the Observer running on different hosts.

Update the Data Guard Broker configuration with the new hostname for the Observer. This step is crucial to redirect the Data Guard Broker to communicate with the Observer on the new host.

Start the Observer on host2 to resume its operations in the new environment.

Disabling and re-enabling Fast-Start Failover (steps 2 and 4) are not strictly necessary for moving the Observer to a new host. These steps would be more relevant if changes to the configuration of Fast-Start Failover itself were required, which is not the case when simply relocating the Observer.

Do you eager to find the ideal job? Do you eager to pass the 1z0-076 exam easily? If you want to, then you have arrived right place now. We provide authentic exam materials for 1z0-076 exam, and we can make your exam preparation easy with our study material various quality features. With the guidance of no less than seasoned professionals, we have formulated updated actual questions for exams, over the years. By practicing our 1z0-076 study materials, you are reducing your chances for failure exam. What's more, we will give all candidates who purchased our material a guarantee that they will pass the 1z0-076 Exam on their very first try. If we fail to deliver our promise, we will give candidates full refund. There are thousands of candidates choose to trusted us and got paid. So, if you really eager to pass the exam, our 1z0-076 study materials must be your best choice.

You may be busy in your jobs, learning or family lives and can't get around to preparing and takes the certificate exams but on the other side you urgently need some useful 1z0-076 certificates to improve your abilities in some areas. So is there a solution which can kill two birds with one stone to both make you get the certificate and spend little time and energy to prepare for the exam? Our 1z0-076study materials provide a variety of functions to help the clients improve their learning. For example, the function to stimulate the exam helps the clients test their learning results of the 1z0-076 study materials in an environment which is highly similar to the real exam.

Opportunities are very important in this society. With the opportunity you can go further. However, it is difficult to seize the opportunity. Is your strength worthy of the opportunity before you? In any case, you really need to make yourself better by using our 1z0-076 training engine. With our 1z0-076 Exam Questions, you can equip yourself with the most specialized knowledge of the subject. What is more, our 1z0-076 study materials can help you get the certification. Imagine you're coming good future maybe you will make a better choice!

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	• Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 3	• Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 4	• Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 5	• Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 6	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 7	• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 8	• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 9	• Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.

Oracle Database 19c: Data Guard Administration Sample Questions (Q108-Q113):

NEW QUESTION # 108

Which three are true about using RMAN in a Data Guard environment?

- A. A recovery catalog is required when RMAN is used to take backups from a logical standby database in a Data Guard configuration if you plan to recover the primary using those backups.
- B. Backups of archived redo logs taken on a physical standby are interchangeable with a primary.
- C. A recovery catalog is required when RMAN is used to take backups from a physical standby database if you plan to recover the primary using those backups.
- D. Backups of data files taken on a physical standby are interchangeable with a primary.
- E. Backups of control files taken on a physical standby are not interchangeable with a primary.

Answer: B,D,E

NEW QUESTION # 109

You created a physical standby database prodsbyi from the primary database prod using SQL and RMAN. Which THREE are prerequisites for creating a Data Guard Broker configuration to manage these databases?

- A. The primary database must have FORCE LOGGING enabled.
- B. The DG_BROKER_START parameter must be set to TRUE for both database instances.
- C. A local net service name to enable connectivity to the PRODSBYI database instance must be defined on the primary database host.
- D. The LOG_ARCHIVE_DEST_n parameters with the service attribute set must be cleared.
- E. The standby database must have supplemental logging enabled.
- F. The primary database must have supplemental logging enabled.

Answer: B,C,F

Explanation:

When setting up a Data Guard Broker configuration for a primary database and its physical standby, the following prerequisites must be met:

* A: Oracle Net connectivity must be defined on both the primary and standby hosts to enable the respective database instances to communicate with each other.

* B: Supplemental logging is required on the primary database because it provides additional logging necessary for the standby database to be able to apply changes from the primary database accurately.

* F: The DG_BROKER_START parameter must be set to TRUE for both the primary and standby

* database instances. This parameter is used to start the Data Guard Broker process which manages the configuration.

Options C and D are not prerequisites for creating a Data Guard Broker configuration. Additionally, while FORCE LOGGING mode (option E) is recommended as a best practice to prevent possible data inconsistencies during media recovery, it is not a strict prerequisite for creating a Data Guard Broker configuration.

References: This guidance is based on Oracle's best practices for setting up Data Guard configurations, as found in the Oracle Data Guard Broker documentation and the Oracle Data Guard Concepts and Administration guide.

NEW QUESTION # 110

Which three Data Guard monitoring activities may be performed using Enterprise Manager Cloud Control?

- A. You can check the potential data loss in the event of a disaster.
- B. You can monitor the redo apply rate on a logical standby database.
- C. You can check if redo apply needs to be tuned.
- D. You can monitor the redo apply rate on a snapshot standby database.
- E. You can set a critical threshold on the redo generation rate metric for a primary database.
- F. You can set a warning threshold on the redo generation rate metric for a physical standby database.

Answer: A,B,E

Explanation:

Enterprise Manager Cloud Control offers comprehensive monitoring capabilities for Oracle Data Guard environments. It enables monitoring the rate at which redo is being applied on a logical standby database (A), which is crucial for ensuring that the standby database is keeping up with the changes from the primary. It also allows setting thresholds on performance metrics, such as the redo generation rate on the primary database (B), to alert administrators when values exceed critical or warning thresholds. Additionally, it provides the capability to estimate the potential data loss in the event of a disaster (E), helping in disaster recovery planning and ensuring business continuity.

References: Oracle Enterprise Manager Cloud Control documentation provides extensive information on its monitoring features for Oracle Data Guard, including setting thresholds, estimating potential data loss, and tracking redo apply rates.

NEW QUESTION # 111

Which three are true concerning database states after a successful switchover?

- A. If the former primary database became a physical standby database it will always be open readonly.
- B. If the former primary database became a logical standby database it will be open read-write.
- C. If the former primary database became a logical standby database it will be in mount state.

- D. The former primary database will always be open.
- E. If the former primary database became a physical standby database it will be in the same state as the former physical standby database.
- F. The new primary database will be open read-write.

Answer: B,E,F

Explanation:

After a successful switchover operation in a Data Guard environment, the new primary database (the former standby) will be open read-write (option A). If the former primary database transitions to a logical standby database, it will also be open read-write (option C), allowing it to apply redo data while servicing read-only queries. The former primary, if converted to a physical standby, will adopt the state that the former physical standby database was in prior to the switchover, which can vary based on the configuration prior to the switchover (option D). The state of a physical standby database can range from mounted to open read-only, depending on whether Real-Time Query was enabled. Thus, the exact state will depend on the pre-switchover setup. It's also essential to highlight that options B and E suggest specific states for a former primary turned logical standby, and a former primary turned physical standby, respectively, but these states are not fixed and depend on the configurations set up by the database administrators. References: The answers are corroborated by Oracle's documentation on Data Guard switchovers, specifically in the Oracle Data Guard Concepts and Administration guide, which explains the roles and states of databases in a Data Guard configuration before and after switchovers.

NEW QUESTION # 112

Your current Data Guard environment consists of:

A primary database containing no abstract data types used for user tables.

Two separate remote physical standby databases used for reporting.

Examine these requirements for adding a new standby database to this Data Guard environment:

The new standby database must provide a disaster recovery solution.

There must be minimal additional performance overheads on the primary database.

The new standby database may require additional indexes and materialized views not present in the primary.

New tables or schemas may be required in the standby database that are not present in the primary.

What would you recommend to fulfill these requirements?

- A. A physical standby database with asynchronous redo transport and Real-Time Query enabled.
- B. A physical standby database with synchronous redo transport and Real-Time Query enabled.
- C. A logical standby database with synchronous redo transport and SQL apply on.
- D. A logical standby database with synchronous redo transport and redo apply on.
- E. A logical standby database with asynchronous redo transport and SQL apply on.

Answer: E
