

# New 1z0-1093-25 Test Objectives, Valid 1z0-1093-25 Exam Forum

BONUS!!! Download part of DumpsTorrent 1z0-1093-25 dumps for free: [https://drive.google.com/open?id=15yJ1eG1fCEB2PGdcdeDIU\\_L23wNg1fYx](https://drive.google.com/open?id=15yJ1eG1fCEB2PGdcdeDIU_L23wNg1fYx)

There are more opportunities for possessing with a certification, and our 1z0-1093-25 study tool is the greatest resource to get a leg up on your competition, and stage yourself for promotion. When it comes to our time-tested 1z0-1093-25 latest practice dumps, for one thing, we have a professional team contains a lot of experts who have devoted themselves to the research and development of our 1z0-1093-25 Exam Guide, thus we feel confident enough under the intensely competitive market. For another thing, conforming to the real exam our 1z0-1093-25 study tool has the ability to catch the core knowledge. So our customers can pass the exam with ease.

## Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>• Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.</li> </ul>

## **Valid 1z0-1093-25 Exam Forum & 1z0-1093-25 Technical Training**

Here we want to give you a general idea of our 1z0-1093-25 exam questions. Our website is operated with our 1z0-1093-25 practice materials related with the exam. We promise you once you make your choice we can give you most reliable support and act as your best companion on your way to success. We not only offer 1z0-1093-25 free demos for your experimental overview of our practice materials, but being offered free updates for whole year long.

### **Oracle Cloud Database Services 2025 Professional Sample Questions (Q23-Q28):**

#### **NEW QUESTION # 23**

Which two of the following options are valid statements regarding the management of the operating system on a Base Database Service Virtual Machine DB System?

- A. Customers are responsible for the security and maintenance of the operating system, including applying necessary patches and updates.
- B. Customers are responsible for the initial OS installation, but then patching is controlled entirely by Oracle.
- C. Oracle manages the underlying operating system patching and updates, ensuring the system remains secure and compliant.
- D. Direct SSH access to the underlying VM is restricted, and all OS-level operations must be performed through the Web Console.
- E. Customers have full root access to the underlying operating system of the Virtual Machine DB System, allowing for customization and installation of custom software.

**Answer: A,E**

Explanation:

B: Full root access:

\* Customers have root-level access to manage the OS, install custom software, and configure settings.

\* This provides flexibility to meet specific application requirements.

D: Responsibility for OS security:

\* With root access, customers must manage OS security, including updates and patches.

\* Oracle provides tools to facilitate patching, but the responsibility lies with the customer.

Why the other options are incorrect:

\* A. Restricted SSH access: SSH access is allowed for VM DB systems.

\* C. Oracle-managed OS patching: Oracle does not automatically patch the OS; this is a customer responsibility.

\* E. Initial OS installation by customers: The OS is pre-installed, but ongoing maintenance is customer-driven.

#### **NEW QUESTION # 24**

Which two requirements must be met first to create an Exadata Database Service Instance?

- A. There are no prerequisites for creating an Exadata Database Service instance.
- B. You need to define the VCN, Private Client subnet, and Service Backup subnet.
- C. You need to define the VCN, Private Client subnet, and Private Backup subnet.
- D. You need to create an Exadata Infrastructure and VM Cluster resource.
- E. You only need a VCN and Universal Cloud Credits.

**Answer: C,D**

Explanation:

C: Define VCN, Private Client subnet, and Private Backup subnet:

- \* These network components are necessary to ensure secure connectivity and backup configurations.
- \* The VCN (Virtual Cloud Network) provides network isolation.
- \* The Private Client subnet enables secure client connections.
- \* The Private Backup subnet is required for secure access to OCI Object Storage for backups.

E: Create Exadata Infrastructure and VM Cluster resource:

- \* Exadata Infrastructure represents the physical hardware.
- \* VM Cluster resource defines compute and storage resources for the databases.
- \* Both must be set up before provisioning the actual database instance.

Why the other options are incorrect:

- \* A. VCN and Universal Cloud Credits: Insufficient; more configuration is needed.
- \* B. Service Backup subnet: Incorrect, it should be a Private Backup subnet.
- \* D. No prerequisites: Incorrect; prerequisites include both network and infrastructure setup.

## NEW QUESTION # 25

In a key-value NoSQL database, what is the primary mechanism for accessing data?

- A. Scanning all documents in the database to find matching data.
- B. Using SQL queries to filter and retrieve data based on complex criteria.
- **C. Using a unique key to retrieve the associated value directly.**
- D. Traversing relationships between nodes to find related data.

**Answer: C**

Explanation:

Data Access in Key-Value Stores:

A key-value database works by storing data as key-value pairs. The primary access method involves:

- \* Providing a unique key to quickly retrieve the associated value.
- \* This model is highly efficient for simple lookups and data retrieval where the key is known.
- \* Due to its simplicity and speed, it is commonly used for caching and session management.

Why the other options are incorrect:

- \* A: SQL queries are used in relational databases, not key-value stores.
- \* C: Traversing nodes is typical in graph databases.
- \* D: Scanning all documents is inefficient and not the primary method in key-value stores.

## NEW QUESTION # 26

What is the MOST appropriate method for patching an Exadata Database Service infrastructure, including both database and storage servers, to maintain the latest security updates and bug fixes?

- **A. Utilizing the automated patching capabilities provided by the Oracle Cloud Infrastructure (OCI) console or API.**
- B. Only patching the database nodes and ignoring the storage servers unless a specific issue arises.
- C. Manually downloading and applying patches to each individual component.
- D. Relying on the default OS auto-update features to handle all necessary patching.

**Answer: A**

Explanation:

B: Automated Patching via OCI Console/API:

- \* Oracle Cloud Infrastructure offers automated patching tools specifically designed for Exadata Database Service.
- \* These tools coordinate patching across database and storage servers, ensuring consistency.
- \* Features include rolling patching to minimize downtime.
- \* Automation significantly reduces human error and ensures that both database and storage servers are patched efficiently.

Why the other options are incorrect:

- \* A. Manual patching: Prone to errors and time-consuming, especially for complex Exadata environments.
- \* C. Default OS auto-update: Insufficient for comprehensive patching of Exadata components.
- \* D. Ignoring storage servers: Unsafe and could lead to security vulnerabilities.

## NEW QUESTION # 27

Which of the following components is responsible for automatically offloading suitable queries from MySQL to the HeatWave accelerator?

- A. MySQL Router
- B. Oracle Cloud Infrastructure (OCI) Load Balancer
- C. HeatWave AutoPilot
- D. MySQL Shell
- E. MySQL Query Optimizer

### Answer: E

Explanation:

A: MySQL Query Optimizer:

- \* The MySQL Query Optimizer determines whether a query can benefit from HeatWave's in-memory, columnar processing.
- \* If a query is deemed suitable, it is automatically offloaded to the HeatWave cluster.
- \* This process significantly improves the execution speed of complex analytical queries.

Why the other options are incorrect:

- \* B. HeatWave AutoPilot: Manages workload optimization but does not directly offload queries.
- \* C. MySQL Router: Manages connection routing, not query offloading.
- \* D. MySQL Shell: Primarily used for administrative tasks, not query optimization.
- \* E. OCI Load Balancer: Manages network traffic distribution, unrelated to database query processing.

## NEW QUESTION # 28

.....

The most distinguished feature of Dumps Torrent's study guides is that they provide you the most workable solution to grasp the core information of the certification syllabus in an easy to learn set of 1z0-1093-25 study questions. Far more superior in quality than any online courses free, the questions and answers contain information drawn from the best available sources. They are relevant to the 1z0-1093-25 Exam standards and are made on the format of the actual 1z0-1093-25 exam.
