Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q60-Q65):

NEW QUESTION # 60
Which of the following TWO are stored in a Log Source of Logging Analytics? (Choose two.)

- A. Which Parsers to use
- B. Which Management Agents to use
- C. Where to store Log data
- D. Where to find Logs

Answer: A,D

Explanation:
A Log Source in Logging Analytics defines how logs are collected and processed:
Which Parsers to use (A): Specifies the parsers (e.g., Syslog, JSON) that extract fields from logs, enabling structured analysis.
Where to find Logs (C): Defines the log location (e.g., file path /var/log/messages, database connection string), directing the collection process.
Why not B or D?
Where to store Log data (B): Storage is managed by Logging Analytics, not defined in the Source.
Which Management Agents to use (D): Agents are associated with Entities, not specified in the Source.
These elements configure log ingestion effectively.

NEW QUESTION # 61
When would you use a vantage point in Application Performance Monitoring (APM)?

- A. Java Management
- B. Distributed Tracing
- C. Application Insights
- D. Synthetic Monitoring

Answer: D

Explanation:

In APM, a vantage point is used in:
Synthetic Monitoring (D): Runs tests from specific locations (vantage points) to monitor web application or API availability and performance globally.
Why not A, B, or C?
Java Management (A): Unrelated to vantage points.
Distributed Tracing (B): Tracks internal request flows, not external tests.
Application Insights (C): Not a formal APM feature; vague term.
Vantage points simulate user access from different regions.

NEW QUESTION # 62

In Application Performance Monitoring (APM), a distributed tracing user initiates a request through a browser. What is the first span called?

- A. Root span
- B. Trace ID
- C. Ajax call

Answer: A

Explanation:
In distributed tracing within OCI APM:
Root span (C): The first span in a trace, representing the entry point of a user request (e.g., an HTTP request from a browser). It has no parent span and initiates the chain of subsequent spans across services.
Why not A or B?
Ajax call (A): A type of request, not a span term.
Trace ID (B): A unique identifier for the entire trace, not a span.
The root span is foundational to tracing a request's journey.

NEW QUESTION # 63

Which Logging Analytics concept represents an asset on your host that could provide log data?

- A. Parser
- B. Entity
- C. Association
- D. Source

Answer: D

Explanation:
In OCI Logging Analytics, a Source defines the origin of log data from an asset on a host.
Source (B): Represents a log-generating asset (e.g., a file, database audit log, or Windows event log), specifying its location, format, and collection frequency. It's associated with an Entity to enable log ingestion and parsing.
Why not A, C, or D?
Association (A): Links a Source to an Entity, not the asset itself.
Entity (C): A logical representation of a resource (e.g., a host), not the log source.
Parser (D): Extracts fields from logs, not the asset providing data.
Sources are foundational to log collection in Logging Analytics.

NEW QUESTION # 64

From the following, select the different metric namespaces used for APM.

- A. RUM metrics, oracle_apm_monitoring, Oracle_apm_synthetic
- B. oracle_apm_monitoring namespace, synthetics, and monitoring
- C. oracle_apm_rum, oracle_apm_synthetics, and oracle_apm_monitoring
- D. AjaxDownloadTime, TotalTraceCount, Oracle_pm_rum

Answer: C

Explanation:

APM uses specific metric namespaces to categorize its telemetry data:

oracle_apm_rum, oracle_apm_synthetics, and oracle_apm_monitoring (D):

oracle_apm_rum: Metrics from Real User Monitoring (e.g., page load times).

oracle_apm_synthetics: Metrics from Synthetic Monitoring (e.g., test response times).

oracle_apm_monitoring: Metrics from distributed tracing (e.g., span counts).

These namespaces align with APM's three core features.

Why not A, B, or C?

A: Individual metric names, not namespaces.

B: Incomplete and incorrect namespace naming.

C: Mixes metric types with partial namespace names.

These namespaces enable targeted metric queries in OCI Monitoring.
