The content of our 201 study guide is very easy for you to understand for all the levels of the candidates.

F5 BIG-IP Administrator Exam Sample Questions (Q93-Q98):

NEW QUESTION # 93

Which is an advantage of terminating SSL communication at the BIG-IP rather than the ultimate web server.

- A. Terminating SSL at the BIG-IP eliminates the need to purchase SSL certificates from a certificate authority.
- B. Terminating SSL at the BIG-IP eliminates all unencrypted traffic from the internal network.

- C. Terminating SSL at the BIG-IP eliminates the need to use SSL acceleration hardware anywhere in the network.
- **D. Terminating SSL at the BIG-IP can eliminate SSL processing at the web servers.**

Answer: D

NEW QUESTION # 94

How is MAC masquerading configured.

- A. Specify the desired MAC address for each floating self-IP address for which you want this feature enabled.
- B. Specify the desired MAC address for each self-IP address for which you want this feature enabled.
- C. Specify the desired MAC address for each VLAN on the active system and synchronize the systems.
- **D. Specify the desired MAC address for each VLAN for which you want this feature enabled.**

Answer: D

NEW QUESTION # 95

When network failover is enabled, which of the following is true?

- A. The presence or absence of voltage over the fail over cable takes precedence over network failover.
- **B. A network failure will not cause a failover as long as there is a voltage across the failover cable.**
- C. The failover cable status is ignored. Failover is determined by the network status only.
- D. Either a network failure or loss of voltage across the failover cable will cause a failover.

Answer: B

NEW QUESTION # 96

A BIG-IP Administrator reviews the log files to determine the cause of a recent problem and finds the following entry.

Mar 27.07.58.48 local/BIG-IP notice mcpd {5140} 010707275 Pool member 172.16.20.1.10029 monitor status down.

What is the cause of this log message?

- A. The pool member has been marked as Down by the BIG-IP Administrator.
- **B. The monitor attached to the pool member has failed.**
- C. The monitor attached to the pool member needs a higher timeout value.
- D. The pool member has been disabled.

Answer: B

NEW QUESTION # 97

A BIG-IP has a virtual server at 150.150.10.10:80 with SNAT automap configured. This BIG-IP also has a SNAT at 150.150.10.11 set for a source address range of 200.200.1.0 / 255.255.255.0. All other settings are at their default states. If a client with the IP address 200.200.1.1 sends a request to the virtual server, what is the source IP address when the associated packet is sent to the pool member.

- **A. Floating self-IP address on VLAN where the packet leaves the system**
- B. 150.150.10.11
- C. Floating self-IP address on VLAN where the packet arrives on the system
- D. 200.200.1.1

Answer: A

NEW QUESTION # 98
