

New 2V0-11.25 Dumps Questions - Reliable 2V0-11.25 Test Tutorial

BTW, DOWNLOAD part of GetValidTest 2V0-11.25 dumps from Cloud Storage: https://drive.google.com/open?id=1kL8uTgWTFpOBpody8rB0XLK4aN_pOiG

To help you learn with the newest content for the 2V0-11.25 preparation materials, our experts check the updates status every day, and their diligent works as well as professional attitude bring high quality for our 2V0-11.25 practice materials. You may doubtful if you are newbie for our 2V0-11.25 training engine, free demos are provided for your reference. The free demo of 2V0-11.25 exam questions contains a few of the real practice questions, and you will love it as long as you download and check it.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and networkstorage design.
Topic 2	<ul style="list-style-type: none">Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

Topic 3	<ul style="list-style-type: none"> VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 4	<ul style="list-style-type: none"> Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 5	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.

Reliable 2V0-11.25 Test Tutorial | 2V0-11.25 Test Torrent

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional 2V0-11.25 Certification to pave the way for a better future. Considered many of the candidates are too busy to review, our experts designed the 2V0-11.25 question dumps in accord with actual examination questions, which would help you pass the exam with high proficiency.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q128-Q133):

NEW QUESTION # 128

A VMware Cloud Foundation administrator notices that the SDDC Manager dashboard shows an alert indicating that one of the ESXi hosts in their workload domain is in a Not Responding state.

What is the first troubleshooting step that should be performed to resolve this issue?

- A. Remove and re-add the ESXi host to the workload domain.
- B. Upgrade the ESXi host to the latest version.
- **C. Check the network connectivity between the ESXi host and the SDDC Manager.**
- D. Reboot the ESXi host from the SDDC Manager interface.

Answer: C

Explanation:

When an ESXi host is in a "Not Responding" state in VMware Cloud Foundation, the first step in troubleshooting is to check the network connectivity between the ESXi host and the SDDC Manager. Network issues (e.g., misconfigured VLANs, firewall settings, or network outages) are often the primary cause of communication problems between SDDC Manager and the ESXi host.

NEW QUESTION # 129

Which three tools could identify and assist with troubleshooting a misconfigured vSAN network? (Choose three.)

- A. esxcli
- B. Ruby vSphere Console (RVC) commands
- C. vmkping
- D. Direct Console User Interface (DCUI)
- E. Supportability and Serviceability (SoS)
- F. vCheck

Answer: A,B,C

Explanation:

esxcli commands (for example, esxcli network vsan cluster get) can validate and configure vSAN network settings. vmkping allows you to test VMkernel adapter connectivity on the vSAN network to confirm reachability and MTU correctness. RVC provides specialized vSAN commands (such as vsan.network_info and health check commands) tailored for diagnosing vSAN network misconfigurations.

NEW QUESTION # 130

What are the three prerequisites an administrator must meet to deploy VMware Aria Suite Lifecycle using SDDC Manager? (Choose three.)

- A. Ensure the VMware Software Install Bundle for VMware Aria Suite Lifecycle is in the local bundle repository.
- B. Ensure that the Application Virtual Networks have been configured.
- C. Ensure that the NTP and DNS settings specified in SDDC Manager are valid for all management components.
- D. Ensure the Management Domain was deployed using vSphere Lifecycle Manager Images.
- E. Ensure that a custom SSL certificate specifying the FQDN of the appliance is available.

Answer: A,B,C

NEW QUESTION # 131

An administrator is deploying a new VMware Cloud Foundation (VCF) environment. After uploading the completed Deployment Parameter Workbook, the validation task fails and an error message is displayed within the VMware Cloud Builder GUI. Which log file can the administrator use to identify the cause of the validation error?

- A. sos.log
- B. jsongenerator-`<timestamp>`.log
- C. vcf-bringup-debug.log
- D. domainmanager.log

Answer: C

Explanation:

According to the official VMware Cloud Foundation Deployment Guide and VMware Cloud Builder troubleshooting documentation, the primary log file used for tracking and diagnosing bring-up and validation errors in a new VCF deployment is:

A). vcf-bringup-debug.log

Exact Extract from VMware Documentation:

"The vcf-bringup-debug.log file records detailed information about all bring-up operations, including parameter validation checks, environment checks, and errors encountered during the deployment process.

When a validation task fails in the Cloud Builder GUI, this log file provides the necessary diagnostic information to identify the cause of the error." Why Not the Other Options?

B). sos.log: Used for SDDC Manager service health and not specific to Cloud Builder validation or deployment tasks.

C). domainmanager.log: Used for ongoing domain management and operations within SDDC Manager, not for Cloud Builder or bring-up process.

D). jsongenerator-`<timestamp>`.log: Related to the generation of JSON files from the parameter workbook, but not the source for in-depth validation or deployment errors.

Summary:

When a validation task fails during the deployment of a new VMware Cloud Foundation environment in Cloud Builder, the administrator should review the vcf-bringup-debug.log file to diagnose and resolve the error, as directed by official VMware documentation.

An IT team needs to ensure compliance and security for various database workloads managed by Data Services Manager. Which three features of Data Services Manager should be leveraged to achieve this? (Choose three.)

- Answer: A,D,E**

Automated patch management ensures that database instances are kept up-to-date with the latest patches, which is essential for maintaining compliance and security.

Role-based access control (RBAC) restricts database access based on user roles, ensuring that only authorized users have access to sensitive data, which is crucial for compliance and security.
