

New 2V0-13.24 Exam Duration & Dumps 2V0-13.24 Free Download

P.S. Free & New 2V0-13.24 dumps are available on Google Drive shared by Actual4Cert: https://drive.google.com/open?id=1ll7Vn8IwwwKFUKCNNpmR508zWPUL0wr_

Cracking the VMware Cloud Foundation 5.2 Architect (2V0-13.24) exam brings high-paying jobs, promotions, and validation of talent. Dozens of VMware Cloud Foundation 5.2 Architect (2V0-13.24) exam applicants don't get passing scores in the real 2V0-13.24 exam because of using invalid VMware 2V0-13.24 exam dumps. Failure in the 2V0-13.24 Exam leads to a loss of time, money, and confidence. If you are an applicant for the VMware Cloud Foundation 5.2 Architect (2V0-13.24) exam, you can prevent these losses by using the latest real 2V0-13.24 exam questions of Actual4Cert.

There is a ton of VMware Cloud Foundation 5.2 Architect (2V0-13.24) prep material available on the internet. But the main thing to notice is their validity and reliability. Many applicants remain unsuccessful in locating the right VMware Cloud Foundation 5.2 Architect (2V0-13.24) practice test and lose their time and money.

Dumps 2V0-13.24 Free Download, Exam 2V0-13.24 Forum

Can you imagine that you only need to review twenty hours to successfully obtain the 2V0-13.24 certification? Can you imagine that you don't have to stay up late to learn and get your boss's favor? With 2V0-13.24 study quiz, passing exams is no longer a dream. If you are an office worker, 2V0-13.24 Preparation questions can help you make better use of the scattered time to review. Just visit our website and try our 2V0-13.24 exam questions, then you will find what you need.

VMware Cloud Foundation 5.2 Architect Sample Questions (Q93-Q98):

NEW QUESTION # 93

What is a critical design decision when deploying Workload Management in a VMware Cloud Foundation environment?

Response:

- A. Configuring VMware NSX for network isolation between workloads
- B. Implementing high-performance storage for every workload
- C. Setting up a dedicated backup solution for workloads
- D. Ensuring the proper configuration of the vSphere control plane

Answer: D

NEW QUESTION # 94

What is the primary objective when documenting design decisions in IT architecture?

Response:

- A. To track hardware components used in the system design.
- B. To ensure stakeholders understand the business goals.
- C. To focus on technical implementation without considering business impact.
- **D. To define and justify the choices made in the design process.**

Answer: D

NEW QUESTION # 95

When creating a VMware Cloud Foundation logical design for a VCF Workload Domain, what must be considered?

Response:

- **A. The workload types and their resource consumption requirements**
- B. The network topology within the data center
- C. The firewall and load balancer configuration
- D. The exact specifications of the hardware to be used

Answer: A

NEW QUESTION # 96

As part of the requirement gathering phase, an architect identified the following requirement for the newly deployed SDDC environment:

Reduce the network latency between two application virtual machines.

To meet the application owner's goal, which design decision should be included in the design?

- A. Configure a Storage DRS rule to keep the application virtual machines on the same datastore.
- B. Configure a DRS rule to separate the application virtual machines to different ESXi hosts.
- **C. Configure a DRS rule to keep the application virtual machines on the same ESXi host.**
- D. Configure a Storage DRS rule to keep the application virtual machines on different datastores.

Answer: C

Explanation:

The requirement is to reduce network latency between two application virtual machines (VMs) in a VMware Cloud Foundation (VCF) 5.2 SDDC environment. Network latency is influenced by the physical distance and network hops between VMs. In a vSphere environment (core to VCF), VMs on the same ESXi host communicate via the host's virtual switch (vSwitch or vDS), avoiding physical network traversal, which minimizes latency. Let's evaluate each option:

Option A: Configure a Storage DRS rule to keep the application virtual machines on the same datastore. Storage DRS manages datastore usage and VM placement based on storage I/O and capacity, not network latency. The vSphere Resource Management Guide notes that Storage DRS rules (e.g., VM affinity) affect storage location, not host placement. Two VMs on the same datastore could still reside on different hosts, requiring network communication over physical links (e.g., 10GbE), which doesn't inherently reduce latency.

Option B: Configure a DRS rule to keep the application virtual machines on the same ESXi host. DRS (Distributed Resource Scheduler) controls VM placement across hosts for load balancing and can enforce affinity rules. A "keep together" affinity rule ensures the two VMs run on the same ESXi host, where communication occurs via the host's internal vSwitch, bypassing physical network latency (typically <1us vs. milliseconds over a LAN). The VCF 5.2 Architectural Guide and vSphere Resource Management Guide recommend this for latency-sensitive applications, directly meeting the requirement.

Option C: Configure a DRS rule to separate the application virtual machines to different ESXi hosts. A DRS anti-affinity rule forces VMs onto different hosts, increasing network latency as traffic must traverse the physical network (e.g., switches, routers). This contradicts the goal of reducing latency, making it unsuitable.

Option D: Configure a Storage DRS rule to keep the application virtual machines on different datastores. A Storage DRS anti-affinity rule separates VMs across datastores, but this affects storage placement, not host location. VMs on different datastores could still be on different hosts, increasing network latency over physical links. This doesn't address the requirement, per the vSphere Resource Management Guide.

Conclusion: Option B is the correct design decision. A DRS affinity rule ensures the VMs share the same host, minimizing network

latency by leveraging intra-host communication, aligning with VCF 5.2 best practices for latency-sensitive workloads. NEW QUESTION # 97

Which of the following actions is a part of differentiating between business and technical requirements?

Response:

- A. Ignoring the business impact and only focusing on performance.
- **B. Understanding the impact of the system on the organization and its operations.**
- C. Defining the physical hardware components needed for the solution.
- D. Focusing only on system availability.

Answer: B

NEW QUESTION # 98

.....

Our 2V0-13.24 exam guide question is recognized as the standard and authorized study materials and is widely commended at home and abroad. Our 2V0-13.24 study materials boost superior advantages and the service of our products is perfect. We choose the most useful and typical questions and answers which contain the key points of the test and we try our best to use the least amount of questions and answers to showcase the most significant information. Our 2V0-13.24 learning guide provides a variety of functions to help the clients improve their learning and pass the 2V0-13.24 exam.
