Actual VMware 2V0-16.25 Practice Test - Quick Test Preparation Tips

In order to make your exam easier for every candidate, our 2V0-16.25 exam prep is capable of making you test history and review performance, and then you can find your obstacles and overcome them. In addition, once you have used this type of 2V0-16.25 exam question online for one time, next time you can practice in an offline environment. The 2V0-16.25 test torrent also offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. Therefore, for your convenience, more choices are provided for you, we are pleased to suggest you to choose our 2V0-16.25 Exam Question for your exam.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.

Topic 2	• Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
Topic 3	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 4	• IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 5	• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q16-Q21):

NEW QUESTION # 16

An administrator needs to ensure that only specific users can manage the virtual machines (VM) in a specific VMware vCenter folder.

Which three steps are required to accomplish this? (Choose three.)

- A. Add the identity source to vCenter.
- B. Create a datastore cluster.
- C. Apply the role to the specific vCenter folder.
- D. Assign the new role to the appropriate users/groups.
- E. Create a new role in vCenter with VM management permissions.

Answer: C,D,E

Explanation:

To ensure that only specific users can manage VMs in a specific VMware vCenter folder, the following three steps are required:

* Create a new role in vCenter with VM management permissions(Answer B):You must define a custom role tailored to managing VMs, which includes permissions such as powering on/off VMs, editing VM settings, and accessing consoles. This role must include the appropriate privileges under the

"Virtual machine" category in vCenter permissions.

* Apply the role to the specific vCenter folder(Answer C):The custom role needs to be applied directly to the target vCenter folder. This enables scope-based access control, where permissions are applied only to VMs within that folder.

* Assign the new role to the appropriate users/groups(Answer A):After creating the role and applying it to the folder, the role must be associated with the correct users or groups. This step uses the vCenter Server's identity source integration to assign roles.

Why the other options are incorrect:

* D. Add the identity source to vCenter:This is a prerequisite step for any role assignment but is not directly required in this specific scenario if the identity source is already configured.

* E. Create a datastore cluster:This is unrelated to managing VM access. Datastore clusters pertain to storage management and are not involved in user permissions or role assignments.

NEW QUESTION # 17

What is the primary purpose of using VMware vSphere Foundation (VVF) Lifecycle Manager for ESX hosts?

- A. To update and maintain the ESX host lifecycle
- B. To monitor the performance of ESX hosts
- C. To create and manage virtual machines
- D. To configure network settings for ESX hosts

Answer: A

Explanation:

The primary purpose of vSphere Lifecycle Manager (vLCM) is to:

* Update, patch, and upgrade ESXi hosts, firmware, and drivers.

* Manage host consistency across clusters with image-based lifecycle management.

Other options are unrelated:

* A. Configure network settings# Done through vCenter or host client, not vLCM.

* B. Monitor performance# Done in vCenter/VCF Operations, not vLCM.

* C. Create/manage VMs# Managed through vCenter, not vLCM.

NEW QUESTION # 18

In VMware Cloud Foundation (VCF) Operations, which node type is responsible for providing fault tolerance for administrative functions within the VCF Operations cluster?

- A. Primary Node
- B. Replica Node
- C. Witness Node
- D. Data Node

Answer: B

Explanation:

In VCF Operations (vRealize Operations) cluster architecture:

* The Primary Node handles administration and management.

* The Replica Node provides fault tolerance for the Primary Node, ensuring that administrative functions remain available in case of failure.

* Data Nodes handle data collection and analytics.

* Witness Node# Not a role in VCF Operations; relevant to vSAN clusters.

Thus, the node type providing fault tolerance for administrative functions is the Replica Node.

NEW QUESTION # 19

What is the benefit of enabling lockdown mode on VMware ESX hosts?

- A. Improves network performance.
- B. Increases CPU and memory resources available to virtual machines (VMs).
- C. Simplifies the management of virtual machines.
- D. Restricts direct access to the ESX host, enhancing security.

Answer: D

Explanation:

Lockdown Mode on ESXi hosts is a security feature that restricts direct login to the ESXi host.

* Once enabled, administrators must manage the host through vCenter Server instead of direct DCUI/SSH access (except for exception users).

* This prevents unauthorized local access and improves overall security compliance.

Other options:

* A. Improves network performance# Not related.

* C. Increases CPU/memory for VMs# Not related.

* D. Simplifies VM management# It actually makes direct management more restricted.

NEW QUESTION # 20

An administrator is following the concept of least privilege and must configure permissions in a vSphere environment granting members of the group corp\VM-Managers the following abilities:

* Power on/off virtual machines

* Open consoles

* Create snapshots

Which out-of-the-box role satisfies these access control requirements?

- **A. Virtual Machine Power User**
- B. Virtual Machine User
- C. Administrator
- D. Virtual Machine Console User

Answer: A

Explanation:

The requirement is to follow least privilege while granting specific VM operations:

* Power on/off virtual machines

* Open consoles

* Create snapshots

The Virtual Machine Power User role is the correct out-of-the-box role, as it includes all these privileges without granting unnecessary administrative access.

Other roles:

* Administrator (A): Grants full environment control # too broad.

* Virtual Machine Console User (B): Limited to console access, cannot power on/off or snapshot.

* Virtual Machine User (C): Can interact with VMs but lacks snapshot privileges.
