New 2V0-17.25 Test Guide - Pass4sure 2V0-17.25 Dumps Pdf

P.S. Free & New 2V0-17.25 dumps are available on Google Drive shared by ValidExam: https://drive.google.com/open?id=1MKOJQNgcVpzaojl8v5OTShqp8p5iwBsc

Dear candidates, pass your test with our accurate & updated 2V0-17.25 training tools. As we all know, the well preparation will play an important effect in the 2V0-17.25 actual test. Now, take our 2V0-17.25 as your study material, and prepare with careful, then you will pass successful. If you really want to choose our VMware 2V0-17.25 PDF torrents, we will give you the reasonable price and some discounts are available. What's more, you will enjoy one year free update after purchase of 2V0-17.25 practice cram.

At ValidExam, we stand behind our VMware 2V0-17.25 Exam Questions and offer a money-back guarantee in the event of failure. We are confident that our VMware Cloud Foundation 9.0 Administrator (2V0-17.25) exam questions and practice test engine will provide you with all the information and tools you need to pass the exam with flying colors. Plus, for a limited time, we are offering a 20% discount on your purchase. Don't wait – invest in your future and advance your career with ValidExam today.

Pass4sure 2V0-17.25 Dumps Pdf & 2V0-17.25 Test Lab Questions

At ValidExam, we are proud to offer you actual 2V0-17.25 exam questions in our VMware 2V0-17.25 practice exam material.

This actual study material has been checked and approved by leading professionals in the field. A team of over 90,000 experts and professionals have collaborated to design the VMware Cloud Foundation 9.0 Administrator (2V0-17.25) exam material, ensuring that you receive both theoretical knowledge and practical insights to excel in the VMware Cloud Foundation 9.0 Administrator exam.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 2	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 4	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q18-Q23):

NEW QUESTION # 18
An administrator is responsible for the management of a VMware Cloud Foundation (VCF)-based private cloud. The environment is configured in the following ways:
A single Organization for VM Applications with 50 application development projects.
Relevant configuration for the FitnessTrackerApp project:
Project Administrators: FTA_Admins (Group)
Project Members: FTA_Developers (Group), FTA_LeadDevelopers (Group)
Provisioning Zone(s): vcf-wld-01
The administrator has been tasked with ensuring that the newly created catalog item (Mobile Application Backend) is initially only visible to the Lead Developers of the FitnessTrackerApp project.
The administrator has already completed:
Logged into VCF Automation.
Updated the Content Source to include the Mobile Application Backend blueprint.
Which four additional steps must the administrator take to complete the objective? (Choose four.)

- A. Configure the Scope of the new policy to be Organization.
- B. Create a new Deployment Limit Policy.
- C. Add the FTA_Developers Group to the policy.
- D. Create a new Content Sharing Policy.

- E. Add the Mobile Application Backend catalog item to the new policy.
- F. Configure the Scope of the new policy to be Project and select the FitnessTrackerApp project.
- G. Add the FTA_LeadDevelopers Group to the new policy.

Answer: D,E,F,G

Explanation:
The VCF 9.0 Automation Guide - Content Sharing Policies describes how to control catalog item visibility. Administrators create Content Sharing Policies to restrict which groups can see specific catalog items.
Steps required for this scenario:
Create a new Content Sharing Policy (D): This policy governs catalog item access.
Add the catalog item to the new policy (B): The Mobile Application Backend blueprint must be explicitly added.
Configure the scope as Project → FitnessTrackerApp (C): This ensures the catalog restriction applies only within the FitnessTrackerApp project.
Add the FTA_LeadDevelopers Group (F): Grants visibility only to this group, fulfilling the requirement that only Lead Developers initially see the item.
Incorrect options:
Deployment Limit Policy (A) controls resource limits, not catalog visibility.
FTA_Developers (E) should not be included, as the requirement is Lead Developers only.
Organization scope (G) would expose the item to all projects, which violates the requirement.
Thus, the administrator must configure a Content Sharing Policy, add the catalog item, scope it to the FitnessTrackerApp project, and restrict it to the Lead Developers group.

NEW QUESTION # 19
Before creating an Organization for All Applications in VCF Automation to support Kubernetes workloads, which two prerequisites must be completed? (Choose two.)

- A. A Region must be configured in the Provider Management Portal.
- B. vSphere Supervisor must be activated in the Management workload domain.
- C. VKS must be activated in the Management workload domain.
- D. Workload domain must be configured for NSX Federation.
- E. vSphere Supervisor must be activated in the workload domain.

Answer: A,B

Explanation:
Per the VCF 9.0 Automation Provider Management Guide:
Supervisor Activation: "Kubernetes-based workloads require Supervisor to be enabled in the Management Domain before deploying organizations." Region Configuration: "Organizations for All Applications must be deployed into a preconfigured Region, defined in the Provider Management Portal." NSX Federation (D) is optional for multi-site deployments. Supervisor is not activated in workload domains (B) but centrally in the management domain. VMware Kubernetes Service (E) is enabled per tenant but not required before Organization creation. Thus, correct prerequisites are A and C.

NEW QUESTION # 20
During a routine check, an administrator observes that several VMs are reporting high memory usage in VMware Aria Operations. They need to verify if the high memory usage is due to memory contention.
What actions should be taken in VMware Aria Operations to verify this?

- A. Review the CPU ready time.
  B Look al the network throughput
- B. Check the memory usage and ballooning metrics.
- C. Analyze the storage I/O performance.

Answer: B

Explanation:
To verify if high memory usage is due to memory contention, the administrator should check the memory usage and ballooning metrics in VMware Aria Operations. Ballooning occurs when the hypervisor reclaims memory from a virtual machine due to memory contention, and monitoring these metrics can help identify whether the VMs are experiencing memory pressure or being forced to

swap memory.

NEW QUESTION # 21

An ESXi host is no longer compliant with the applied Host Profile after a reboot.
What is the best initial step to rectify the situation?

- A. Reset the host to factory defaults and reinstall ESXi
- B. Manually edit the host's /etc/vmware/esx.conf file
- C. Remove the host from the cluster and rejoin it
- D. Remediate the host against the Host Profile in vCenter

Answer: D

Explanation:
If a host becomes non-compliant, the first step is to remediate it via the Host Profile. This automates reapplying configurations.
Manually editing config files or reinstalling ESXi are last-resort measures.

NEW QUESTION # 22

An administrator is tasked with upgrading a vSphere 8-only environment to VCF 9.0. Which three components must be deployed as part of the upgrade? (Choose three.)

- A. VCF Operations
- B. VCF Operations fleet management
- C. VCF Operations for Networks
- D. VCF Identity Broker
- E. VCF Operations for Logs
- F. VCF Operations Collector

Answer: A,B,F

Explanation:
The VCF 9.0 Upgrade Guide specifies required components when converting from a vSphere-only deployment to full VCF. The must-deploy services include:
VCF Operations fleet management - central monitoring of multiple instances.
VCF Operations - core operational monitoring platform.
VCF Operations Collector - required for data ingestion from vSphere, NSX, and vSAN.
The Identity Broker is already embedded with VCF 9.0 SSO, while VCF Operations for Logs and Networks are optional add-ons for extended visibility. Thus, the required three are: A, D, F.

NEW QUESTION # 23

......

Even in a globalized market, the learning material of similar 2V0-17.25 doesn't have much of a share, nor does it have a high reputation or popularity. In this dynamic and competitive market, the 2V0-17.25 learning questions can be said to be leading and have absolute advantages. In order to facilitate the user real-time detection of the learning process, we 2V0-17.25 Exam Material provideds by the questions and answers are all in the past.it is closely associated, as our experts in constantly update products every day to ensure the accuracy of the problem, so all 2V0-17.25 practice materials are high accuracy.
