

New 2V0-17.25 Test Sims | Latest 2V0-17.25 Exam Dumps

Get 2025 Update VCP-VCF 2V0-17.25 Dumps To Study The Latest Questions

1. An administrator is preparing to deploy a new VMware Cloud Foundation (VCF) fleet to an environment that does not have Internet access.

Which two binaries must be uploaded to the VCF Installer appliance before initiating the deployment?

(Choose two.)

- A. Identity Broker
- B. ESX
- C. NSX
- D. VCF Operations
- E. Lifecycle Manager

Answer: C, D

Explanation:

In VCF 9.x, air-gapped bring-up requires staging the required binaries in the VCF Installer. The documented list explicitly includes NSX and VCF Operations among the components to upload. The product guide states: "VMware Cloud Foundation required binaries include... NSX ... VMware Cloud Foundation Operations ... vCenter ... SDDC Manager..." (exact list excerpt). This list does not call for ESX images or the legacy "Lifecycle Manager."

Therefore, from the given options the two binaries that must be uploaded are NSX and VCF Operations. ESX is pre-imaged on hosts per preparation guidance and is not a required VCF Installer binary; "Lifecycle Manager" is not used in VCF 9.0 bring-up.

2. After a migration to VCF 9.0, an administrator must import only logging data newer than 90 days from Aria Operations for Logs 8.x into VCF Operations for Logs. If VCF Operations for Logs has enough space available, what is the correct way to achieve this?

- A. Configure log forwarding in Aria Operations for Logs.
- B. Import logs from an NFS archive used for Aria Operations for Logs.
- C. Initiate the transfer from the Control Panel in VCF Operations.
- D. Initiate the transfer from Aria Operations for Logs.

Answer: C

Explanation:

VCF 9.0 introduces Log Data Transfer initiated from VCF Operations. The docs say: "You can transfer log data for up to 90 days from Aria Operations for Logs 8.x... The migrated logs are stored in VCF Operations for logs." and "To transfer logs... navigate to the Logs Data Transfer card in Administration > Control Panel... click the INITIATE TRANSFER button... You can select the duration of logs to transfer..." (emphasis added).

They further clarify that simple forwarding does not transfer already ingested logs: "Forward logs... does not transfer already ingested logs. Transfer historical logs up to 90 days... using the Log Data Transfer feature in VCF Operations."

Hence, the correct action is to initiate the transfer in VCF Operations (Administration > Control Panel > Logs Data Transfer).

3. Which tool does an administrator use to collect and validate the initial inputs for the deployment of a VMware Cloud Foundation (VCF) fleet?

- A. SDDC Manager
- B. Cloud Builder

Latest 2V0-17.25 Exam Dumps - Practice 2V0-17.25 Questions

VMware 2V0-17.25 practice questions are based on recently released VMware 2V0-17.25 exam objectives. Includes a user-friendly interface allowing you to take the VMware 2V0-17.25 Practice Exam on your computers, like downloading the PDF, Web-Based VMware 2V0-17.25 practice test software, and Desktop VMware 2V0-17.25 practice exam software.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which vSphere features or settings help automate host patching and ensure all hosts in a cluster are uniformly updated?

- A. Enhanced vMotion Compatibility (EVC)
- B. Host Profiles
- C. vSphere Update Manager in older versions
- D. vSphere Lifecycle Manager (vLCM)

Answer: B,C,D

Explanation:

vSphere Lifecycle Manager (or Update Manager in older versions) automate patching, while Host Profiles help maintain consistent configurations. EVC standardizes CPU features but does not patch or update hosts.

NEW QUESTION # 60

An administrator has a requirement to share the contents of a Content Library across multiple vCenter instances. What steps should the administrator perform to meet this requirement?

- A. Create a Local content library on each vCenter instance and perform a synchronization
- B. Create a Local content library on a single vCenter instance and enable publishing
- C. Create a Subscribed content library on each vCenter instance and enable publishing
- D. Create a Subscribed content library on a single vCenter instance and perform a synchronization

Answer: B

Explanation:

To share the contents of a Content Library across multiple vCenter instances, you need to create a Local content library on one vCenter instance and enable publishing. This allows the library to be accessible by other vCenter instances, where they can subscribe to it, ensuring the content is shared.

NEW QUESTION # 61

An administrator needs to manage a large inventory of VMs spread across multiple data centers. Which features in vCenter can help organize these objects effectively?

- A. Resource Pools for CPU/memory grouping
- B. vSphere Pod Security
- C. Tags and custom attributes
- D. Folders for grouping VMs logically

Answer: A,C,D

Explanation:

vCenter Folders (A), Resource Pools (B), and Tags/attributes (D) all help categorize and manage large inventories. "vSphere Pod Security" (C) is not a standard vCenter feature.

NEW QUESTION # 62

What is the function of Velero?

- A. Backup and restore Kubernetes clusters.
- B. Collect data and logs from different sources, unify them, and send them to multiple destinations.
- C. Publish DNS records for applications to DNS servers.
- D. Monitor cluster services.

Answer: A

Explanation:

Velero is an open-source Kubernetes backup and restore solution integrated into VMware Cloud Foundation for Kubernetes management.

The VCF 9.0 Kubernetes Services Documentation describes it as: Velero provides backup, recovery, and migration of Kubernetes cluster resources and persistent volumes.

Key functionality includes:

Backup and restore of Kubernetes objects such as deployments, services, and namespaces.

Data protection for persistent volumes via storage snapshots.

Migration capabilities across clusters.

NEW QUESTION # 63

An ESXi host is no longer compliant with the applied Host Profile after a reboot.

What is the best initial step to rectify the situation?

- A. Reset the host to factory defaults and reinstall ESXi
- B. Remove the host from the cluster and rejoin it
- C. Manually edit the host's /etc/vmware/esx.conf file
- **D. Remediate the host against the Host Profile in vCenter**

Answer: D

Explanation:

If a host becomes non-compliant, the first step is to remediate it via the Host Profile. This automates reapplying configurations. Manually editing config files or reinstalling ESXi are last-resort measures.

NEW QUESTION # 64

.....

Our 2V0-17.25 study materials are in the process of human memory, is found that the validity of the memory used by the memory method and using memory mode decision, therefore, the 2V0-17.25 training materials in the process of examination knowledge teaching and summarizing, use for outstanding education methods with emphasis, allow the user to create a chain of memory, the knowledge is more stronger in my mind for a long time by our 2V0-17.25 study engine.
