Our company has realized that a really good product is not only reflected on the high quality but also the consideration service. So we not only provide all people with the AD0-E716 test training materials with high quality, but also we are willing to offer the fine service system for the customers, these guarantee the customers can get. If you decide to buy the AD0-E716 learn prep from our company, we are glad to answer your all questions about the AD0-E716 study materials. We believe that you will make the better choice for yourself by our consideration service on the AD0-E716 exam questions.

## Adobe Commerce Developer with Cloud Add-on Sample Questions (Q25-Q30):

### NEW QUESTION # 25

An Adobe Commerce developer is being tasked with creating a new cron job to run a method that has already been written. What are the minimally required steps to accomplish this?

- A. Create a crontab.xmi file and set a schedule for the new cron job.
- B. Create crontab.xmi and cron\_groups.xmi files to assign the new job to a cron group.
- C. Create a crontab.xmi file and a new system configuration in system.xmi for the schedule.

### Answer: A

Explanation:

According to the Configure and run cron guide for Magento 2 developers, the crontab.xmi file is used to declare and configure cron jobs for a module. The file should specify the name, instance, method and schedule of the cron job. Therefore, creating a crontab.xmi file and setting a schedule for the new cron job are the minimally required steps to accomplish this task. Verified Reference: <https://devdocs.magento.com/guides/v2.3/config-guide/cli/config-cli-subcommands-cron.html>

### NEW QUESTION # 26

A developer is working on an Adobe Commerce Cloud project and wants to get connection data for the environment's deployed services. The developer has all of the necessary permissions to do this.

Which two options would the developer take to get the connection credentials? (Choose Two.)

- A. Execute ece-tools env:configshow services Command.
- B. Connect to server via SSH and read \$\_ENV['services'] variable.
- C. Get the data from the Project Web Interface dedicated section.
- D. Run the magento-cloud relationships CLI Command.

### Answer: C,D

Explanation:

In Adobe Commerce Cloud, connection data for deployed services (such as databases, caches, and other services) can be retrieved using different methods depending on the developer's access and the tools available.

\* Using magento-cloud relationships Command:

\* This CLI command retrieves the connection credentials for the services associated with the environment, such as database and Redis, directly from the command line.

\* Project Web Interface:

\* The Project Web Interface provides a dedicated section where developers can access service connection details, making it convenient for those who prefer a graphical interface.

\* Why Options A and B are Correct:

\* Both methods are valid and frequently used for accessing connection information. Option C, ece-tools env:configshow services, does not exist. Option D, reading \$\_ENV['services'], would require SSH access and does not provide direct connection details in a user-friendly format.

\* References:

\* Adobe Commerce documentation on Accessing Services

### NEW QUESTION # 27

A merchant is experiencing performance issues on integration environments of their Adobe Commerce Cloud Pro plan and wants to upgrade to Enhanced Integration Environments.

What are the steps necessary prior to redeploying in order to upgrade to Enhanced Integration Environments?

- A. 1. Limit the number of Integration branches to two  
2. Submit a support ticket requesting the upgrade
- B. 1. Limit the number of Integration branches to three  
2. Set the ENV.ENVIRONMENT in .magento.env.yaml to ENHANCEDINTEGRATION
- C. 1. Limit the number of Integration branches to four  
2. Configure integration environments in the cloud GUI and set the Enhanced switch to On

**Answer: A**

Explanation:

The steps necessary prior to redeploying in order to upgrade to Enhanced Integration Environments are to limit the number of integration branches to two and to submit a support ticket requesting the upgrade. Enhanced Integration Environments are an improved version of integration environments that offer better performance, stability, and security. They have a limit of four active branches at a time, but only two branches can be migrated from standard integration environments. The developer needs to delete or deactivate any extra branches before requesting the upgrade from Adobe support. Verified Reference: [Magento 2.4 DevDocs]

#### NEW QUESTION # 28

An Adobe Commerce developer is asked to implement a 15% surcharge for all users from a 'Wholesale' customer group. Keeping best practices in mind, what is a correct to accomplish this?

- A. Create an Observer to the catalog\_product\_get\_final\_price event. Check if the current customer is in the 'Wholesale' group, and if so, retrieve the
- B. Declare a new total collector class to calculate the modified total if the current user is in the group, register it in the module's etc/sales .xml file, modify the checkout\_cart\_index.xml and checkout\_index\_index.xml layouts to include a new child in the totals block.
- C. Create a Cart Price Rule that applies only to the 'Wholesale' group. Specify no conditions for the rule, and in the Actions section, specify for the rule to apply a "Percent of product price discount", with the 'Discount Amount' field set to -15.

**Answer: A**

Explanation:

product from the \$observer->getEventC) data and Call \$product->setData('final\_price', \$product->getData('final\_price') \* 1.15).

Explanation:

The possible reason why the payment method is missing in the admin is that in the module config.xml, the node can\_use\_internal was not set to true. This node determines whether the payment method can be used in the admin area or not. If it is set to false or omitted, the payment method will not be available for admin orders. To enable the payment method for admin use only, the node can\_use\_internal should be set to true and the node can\_use\_checkout should be set to false. Verified Reference: [Magento 2.4 DevDocs] [Magento Stack Exchange]

#### NEW QUESTION # 29

An Adobe Commerce developer has created a new shipping carrier. Everything has been implemented and the collectRates() and getAllowedMethodsQ functions can be seen below:

```
public function collectRates(RateRequest $request) {
    if (!$this->getConfigFlag('active')) {
        return false;
    }

    $result = $this->rateResultFactory->create();
    $method = $this->rateMethodFactory->create();

    $method->setCarrier($this->code);
    $method->setCarrierTitle($this->getConfigData('title'));
    $method->setMethod($this->code);
    $method->setMethodTitle($this->getConfigData('name'));

    $method->setPrice(0);
    $method->setCost(10);

    $result->append($method);
}

return $result;
}
```

```
public function getAllowedMethods() {
    return [$this->_code => $this->getConfigData('name')];
}
```

141

Given the above code, what would be the displayed cost of the shipping method and final amount charged to the customer?

- A. The shipping method would display \$0 but customers would pay a \$10 handling fee for their order.
- B. The shipping method would display \$10 and customers would pay \$10 for using the new shipping method.
- C. The shipping method would display \$0 and customers would pay \$0 for using the new shipping method.

**Answer: C**

## NEW QUESTION # 30

Now on the Internet, a lot of online learning platform management is not standard, some web information may include some viruses, cause far-reaching influence to pay end users and adverse effect. Choose the ADO-E716 Study Tool, can help users quickly analysis in the difficult point, high efficiency of review, and high quality through the Adobe Commerce Developer with Cloud Add-on exam, work for our future employment and increase the weight of the promotion, to better meet the needs of their own development.
