

# New AD0-E902 Test Sims, Instant AD0-E902 Access

BONUS!!! Download part of DumpsReview AD0-E902 dumps for free: <https://drive.google.com/open?id=1kMoVAJE2LzSeq3AM4FIVLDqytEPshyJe>

Choosing our AD0-E902 learning guide is not only an enrichment of learning content, but also an opportunity to improve our own discovery space. Our AD0-E902 study guide materials could bring huge impact to your personal development, because in the process of we are looking for a job, hold a AD0-E902 certificate you have more advantage than your competitors, the company will be a greater probability of you. After using our AD0-E902 Study Guide materials, users can devote more time and energy to focus on their major and makes themselves more and more prominent in the professional field.

It is known to us that more and more companies start to pay high attention to the AD0-E902 certification of the candidates. Because these leaders of company have difficulty in having a deep understanding of these candidates, may it is the best and fast way for all leaders to choose the excellent workers for their company by the AD0-E902 Certification that the candidates have gained. There is no doubt that the AD0-E902 certification has become more and more important for a lot of people. And with our AD0-E902 exam questions, you can get the AD0-E902 certification easily.

## Instant AD0-E902 Access | AD0-E902 Valid Exam Pdf

As long as you have a will, you still have the chance to change. Once you are determined to learn our AD0-E902 study materials, you will become positive and take your life seriously. Through the preparation of the AD0-E902 exam, you will study much practical knowledge. Of course, passing the exam and get the AD0-E902 certificate is just a piece of cake. With the high pass rate of our AD0-E902 practice braindumps as 98% to 100%, i can say that your success is guaranteed.

## Adobe AD0-E902 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Topic 1 | <ul style="list-style-type: none"><li>Foundational Technical Concepts: This section of the exam measures the skills of Fusion Developers and covers core technical concepts related to data transformation, function nesting, and expression formation in Fusion. Candidates must understand how to modify field formats, use appropriate functions, and work with data manipulation techniques. One key skill evaluated is selecting the correct function to transform data between different formats.</li></ul> |
| Topic 2 | <ul style="list-style-type: none"><li>Working with APIs: This section of the exam measures the skills of Integration Specialists and assesses knowledge of API interactions within Fusion. Candidates must handle rate-limiting errors, identify ways to integrate third-party APIs and determine the correct module types when built-in functionalities are unavailable. One critical skill evaluated is implementing a solution for API rate limits to ensure seamless integration.</li></ul>                   |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 3 | <ul style="list-style-type: none"> <li>• <b>Testing and Error Handling:</b> This section of the exam measures the skills of Quality Assurance Engineers and evaluates the principles of testing and error handling in Fusion. Candidates must define test plans and test cases, identify directives for handling unreliable services, and configure custom error handling mechanisms. One specific skill tested is applying the correct error-handling directive to manage service disruptions.</li> </ul>                                                                             |
| Topic 4 | <ul style="list-style-type: none"> <li>• <b>Scenario Design and Architecture:</b> This section of the exam measures the skills of Solution Architects and focuses on designing and structuring Fusion scenarios efficiently. Candidates must determine the correct steps to parse JSON, perform data lookups, and distinguish between different triggers. Understanding system limitations, module selection, and timezone handling is also essential. One key skill assessed is identifying the appropriate method for uploading documents while managing access controls.</li> </ul> |

## Adobe Workfront Fusion Professional Sample Questions (Q44-Q49):

### NEW QUESTION # 44

A web service provides the following array named "Colors":

```
[
  {
    "ID": "22342",
    "name": "Red"
  },
  {
    "ID": "33495",
    "name": "Blue"
  }
]
```

Which expression returns the first ID in the array?

• A.

```
get( map( 2. Colors ; ID ; 1 ) )
```

• B.

```
map( 2. Colors ; ID ; ID ; 1 )
```

• C.

```
map( get( 2. Colors ; 1 ) )
```

**Answer: A**

Explanation:

\* Understanding the Array and the Task:

\* Input Array (Colors):

```
[
  { "ID": "22342", "name": "Red" },
  { "ID": "33495", "name": "Blue" }
]
```

\* Goal: Extract the first ID from the array, which is "22342".

\* Why Option B is Correct:

\* The expression `get(map(2.Colors; ID); 1)`:

\* `map(2.Colors; ID)`: Iterates over the array 2.Colors and extracts the ID field from each object. This creates a new array containing just the IDs: `["22342", "33495"]`.

\* `get(...; 1)`: Retrieves the first element of the newly created array, which is "22342".

\* Why the Other Options are Incorrect:

\* Option A (`map(2.Colors; ID; ID; 1)`):

\* This syntax is invalid because the additional ID and 1 parameters are misplaced. The `map` function requires only two arguments: the array and the field to map.

\* Option C (`map(get(2.Colors; ID); 1)`):

\* This incorrectly attempts to use `get` inside `map`. The `get` function does not return a field for mapping, so the syntax is invalid.

\* How the Expression Works:

\* Step 1: `map(2.Colors; ID)`

- \* Extracts the ID field from each object in the Colors array.
- \* Output: ["22342", "33495"].
- \* Step 2: get(...; 1)
- \* Retrieves the first element of the mapped array.
- \* Output: "22342".
- \* Use Case in Workfront Fusion:
- \* This approach is commonly used when processing arrays in Fusion scenarios, ensuring specific elements are accessed without additional looping or complex logic.

References and Supporting Documentation:

- \* Adobe Workfront Fusion Functions Documentation
- \* Workfront Community: Using Map and Get Functions

By combining map and get, this expression efficiently extracts the first ID from the array, ensuring correct and reliable results.

#### NEW QUESTION # 45

What are two required elements of a test case? (Choose two.)

- **A. Expected outcome of test**
- B. Name of test owner
- **C. Clear procedure for completing the test**
- D. Source code being tested

**Answer: A,C**

Explanation:

- \* A. Expected Outcome of Test
- \* A test case must clearly state what the expected outcome is, providing a standard against which the results can be measured.
- \* This ensures testers can validate whether the scenario behaves as intended.
- \* C. Clear Procedure for Completing the Test
- \* A well-defined procedure outlines the exact steps required to execute the test, ensuring consistent and repeatable testing.
- \* This reduces ambiguity and helps identify whether errors are due to the scenario configuration or improper test execution.
- \* Why Not Other Options?
- \* B. Name of Test Owner: While helpful for accountability, the name of the test owner is not a required component of the test case itself.
- \* D. Source Code Being Tested: Fusion scenarios do not typically involve source code. Instead, the focus is on workflow execution and configuration, making this element irrelevant.

References:

#### NEW QUESTION # 46

A Fusion designer needs to create a Fusion scenario that will assign a user to each task with the Copywriter job role on a project. Which method results in the fewest number of operations?

- A. Searching for Tasks in the project with the Copywriter role and assign the user to each task
- **B. Using the Misc Action module for the project to assign all Copywriter assignments to the user**
- C. Searching for all assignments in the project where the role is Copywriter and add the user to each assignment

**Answer: B**

Explanation:

Step by Step Comprehensive Detailed Explanation:

- \* Scenario Context:
- \* The goal is to assign a user to all tasks on a project where the role is Copywriter.
- \* The chosen method should minimize the number of operations to ensure efficiency.
- \* Option Analysis:
- \* A. Searching for all assignments in the project where the role is Copywriter and add the user to each assignment:
- \* This approach involves searching assignments, iterating through them, and adding the user individually. Each iteration generates multiple operations, making it less efficient.
- \* B. Searching for Tasks in the project with the Copywriter role and assign the user to each task:

- \* Similar to Option A, this approach also requires iterating through tasks and assigning users one by one, resulting in a higher number of operations.
- \* C. Using the Misc Action module for the project to assign all Copywriter assignments to the user:
- \* Correct. The Misc Action module can perform bulk actions (e.g., assigning users to roles) in a single operation.
- \* This method is the most efficient, as it minimizes the number of operations while achieving the same result.
- \* Why the Misc Action Module is Best:
- \* Efficiency: Bulk operations reduce the number of API calls and iterations.
- \* Performance: Using fewer operations optimizes scenario execution and reduces resource consumption.
- \* Simplicity: Avoids the complexity of iterating through tasks or assignments individually.
- \* Implementation:
- \* Add a Misc Action module to the scenario.
- \* Configure the module to assign the user to all tasks with the Copywriter role on the selected project.
- \* Test the module to ensure it performs the bulk assignment as expected.

#### NEW QUESTION # 47

In this image,

all items are displayed in a position that does not hide their execution sequence. In what order do the modules execute?

- A. Google Drive > Email > Data Store > Workfront > Salesforce
- B. Email > Workfront > Data Store > Salesforce > Google Drive
- C. Email > Data Store > Workfront > Salesforce >
- D. Google Drive > Email > Workfront > Data Store > Salesforce

**Answer: A**

Explanation:

- \* Understanding the Diagram:
- \* The image depicts a Workfront Fusion scenario using Routers to split and manage multiple execution paths.
- \* Fusion executes modules in a left-to-right and top-to-bottom sequence along each path. Routers direct the flow to downstream modules.
- \* Determining the Execution Sequence:
- \* Path 1:
- \* The first path begins with Google Drive. The Router branches out, directing execution sequentially to other modules.
- \* Path 2:
- \* The second path starts with Email and continues downwards through the remaining modules.
- \* Order Within Branches:
- \* After passing through a Router, each branch completes its sequence of modules before moving to the next Router.

- \* Why Option D is Correct:
- \* Execution begins from the leftmost module (Google Drive) and flows rightward. The sequence is as follows:
- \* Google Drive
- \* Email
- \* Data Store
- \* Workfront
- \* Salesforce
- \* This matches the visual layout and Fusion's execution rules for scenarios with Routers.
- \* Why the Other Options are Incorrect:
- \* Option A ("Google Drive > Email > Workfront > Data Store > Salesforce"):
  - \* Incorrect because Workfront does not precede Data Store in the execution order.
- \* Option B ("Email > Workfront > Data Store > Salesforce > Google Drive"):
  - \* Incorrect because execution begins with Google Drive, not Email.
- \* Option C ("Email > Data Store > Workfront > Salesforce"):
  - \* Incorrect because it excludes Google Drive as the starting point and places modules out of sequence.
- \* Execution Rules in Workfront Fusion:
  - \* Fusion executes modules in the order they appear visually, starting from left to right and top to bottom within each branch.
  - \* Routers split the execution into separate branches, which are completed sequentially.
- References and Supporting Documentation:
  - \* Adobe Workfront Fusion: Execution Flow Rules
  - \* Workfront Community: Understanding Router and Module Execution

The correct execution sequence is Google Drive > Email > Data Store > Workfront > Salesforce, ensuring all paths are processed as per the scenario's layout.

#### NEW QUESTION # 48

A source system should provide a Workfront task ID, but queries keep resulting in an error. Which module helps determine if the task ID is valid?

- A. Read Related Record
- **B. Search Record**
- C. Read Record

**Answer: B**

Explanation:

To determine if a task ID is valid in Workfront, you can use the Search Record module. This module allows you to search for records, such as tasks, within Workfront based on a given ID.

\* Search Record Module:

- \* This module can be used to search for a specific task in Workfront by its task ID.
- \* If the task ID is valid, it will return the task details; if the task ID is invalid, it will return an error or no results.
- \* The Search Record module is designed to check if a specific record exists in Workfront, making it ideal for verifying the validity of a task ID.
- \* Why Not Other Options?
  - \* A. Read Record: This module reads a specific record by ID but does not search across multiple records. It may not provide the flexibility needed to check if a task ID is valid without knowing the exact task ID.
  - \* B. Read Related Record: This module is used to read a related record (e.g., reading the project related to a task). It is not suitable for validating a task ID directly.

References:

- \* Adobe Workfront Fusion Documentation: Search Record Module Usage
- \* Experience League Community: Verifying Record IDs in Workfront Fusion

#### NEW QUESTION # 49

.....

With these mock exams, it is easy to track your progress by monitoring your marks each time you go through the AD0-E902 practice test. Our AD0-E902 practice exams will give you an experience of attempting the AD0-E902 original examination. You will be able to deal with the actual exam pressure better when you have already experienced it in our Adobe AD0-E902 practice exams.
