Gradually, you will learn much knowledge and become totally different from past. You will regret to miss our Advanced-Administrator practice materials. Come to purchase our Advanced-Administrator learning guide!

Salesforce Certified Advanced Administrator Sample Questions (Q46-Q51):

NEW QUESTION # 46
AW Computers has created a custom field called Government ID on a custom object. Most users with a custom Sales profile should be unable to access this field. A select group of Sales users called the Institutional Team should be able to access the Government ID field via reports.
How should an administrator accommodate this request?

- A. Configure a report type with the Government ID field. Assign this report type to the Institutional Team via a permission set.
- B. Create a permission set with Read access to the field. Assign the permission set to the Institutional Team.
- C. Mark the field as Read Only on the sales profile. Create a permission set to re-enable reporting for the Institution Team.
- D. Make a report with the Government ID field included. Share this report to the Institutional Team in a public reports folder.

Answer: B

Explanation:
A permission set is a collection of settings and permissions that give users access to various tools and functions in Salesforce. A permission set can be used to extend users' functional access without changing their profiles. You can assign permission sets to individual users or groups of users based on their business needs. In this case, you can create a permission set with Read access to the Government ID field on the custom object and assign it to the Institutional Team users who need access to this field via reports.

NEW QUESTION # 47
Universal Containers has a process to allow an employee to submit a vacation request and route it to the employee's manager for approval. An employee attempted to submit a request but it could NOT be submitted.
How should the administrator troubleshoot this?

- A. Ensure the user record has an assigned active manager
- B. Review the system log to determine the root cause
- C. Use workflow to email the administrator if the process fails
- D. Ensure the approval step has an associated action

Answer: A

NEW QUESTION # 48
A user at Cloud Kicks has informed the administrator that they are unable to log in to Salesforce via multi- factor authentication.
Which two area should the administrator review to understand potential root causes?
Choose 2 answers

- A. Setup Audit Trail
- B. Login History
- C. Identity Verification History
- D. Debug Logs

Answer: B,C

Explanation:
Identity verification history and login history are two areas that the administrator can review to understand potential root causes of multi-factor authentication issues. Identity verification history shows the methods and results of identity verification attempts for a user, such as email verification, SMS verification, or app verification. Login history shows the status, source, and location of login

attempts for a user, as well as any login errors or challenges that occurred. These two areas can help the administrator identify if the user entered the correct verification code, if the user's device or app is compatible with multi-factor authentication, or if there are any network or security issues that prevent successful verification.
