

New AIGP Exam Questions & Latest AIGP Dumps Ebook

BONUS!!! Download part of RealExamFree AIGP dumps for free: <https://drive.google.com/open?id=1xFrRK4wSLi-fgzjGzTvQOkPonsZaydd>

The RealExamFree is one of the leading IAPP AIGP exam preparation study material providers in the market. The RealExamFree offers valid, updated, and real IAPP Certified Artificial Intelligence Governance Professional AIGP exam practice test questions that assist you in your AIGP Exam Preparation. The IAPP AIGP exam questions are designed and verified by experienced and qualified IAPP exam trainers.

IAPP AIGP Exam Syllabus Topics:

Topic	Details

Topic 1	• Understanding How Laws, Standards, and Frameworks Apply to AI: This section of the exam measures skills of compliance officers and covers the application of existing and emerging legal requirements to AI systems. It explores how data privacy laws, intellectual property, non-discrimination, consumer protection, and product liability laws impact AI. The domain also examines the main elements of the EU AI Act, such as risk classification and requirements for different AI risk levels, as well as enforcement mechanisms. Furthermore, it addresses the key industry standards and frameworks, including OECD principles, NIST AI Risk Management Framework, and ISO AI standards, guiding organizations in trustworthy and compliant AI implementation.
Topic 2	• Understanding How to Govern AI Development: This section of the exam measures the skills of AI project managers and covers the governance responsibilities involved in designing, building, training, testing, and maintaining AI models. It emphasizes defining the business context, performing impact assessments, applying relevant laws and best practices, and managing risks during model development. The domain also includes establishing data governance for training and testing, ensuring data quality and provenance, and documenting processes for compliance. Additionally, it focuses on preparing models for release, continuous monitoring, maintenance, incident management, and transparent disclosures to stakeholders.
Topic 3	• Understanding How to Govern AI Deployment and Use: This section of the exam measures skills of technology deployment leads and covers the responsibilities associated with selecting, deploying, and using AI models in a responsible manner. It includes evaluating key factors and risks before deployment, understanding different model types and deployment options, and ensuring ongoing monitoring and maintenance. The domain applies to both proprietary and third-party AI models, emphasizing the importance of transparency, ethical considerations, and continuous oversight throughout the model's operational life.
Topic 4	• Understanding the Foundations of AI Governance: This section of the exam measures skills of AI governance professionals and covers the core concepts of AI governance, including what AI is, why governance is needed, and the risks and unique characteristics associated with AI. It also addresses the establishment and communication of organizational expectations for AI governance, such as defining roles, fostering cross-functional collaboration, and delivering training on AI strategies. Additionally, it focuses on developing policies and procedures that ensure oversight and accountability throughout the AI lifecycle, including managing third-party risks and updating privacy and security practices.

AIGP Guide Torrent: IAPP Certified Artificial Intelligence Governance Professional & IAPP Certified Artificial Intelligence Governance Professional Dumps VCE

The AIGP study materials of our company is the study tool which best suits these people who long to pass the exam and get the related certification. So we want to tell you that it is high time for you to buy and use our AIGP Study Materials carefully. Now we are glad to introduce the study materials from our company to you in detail in order to let you understanding our study products.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q129-Q134):

NEW QUESTION # 129

A leading software development company wants to integrate AI-powered chatbots into their customer service platform. After researching various AI models in the market which have been developed by third-party developers, they're considering two options: Option A - an open-source language model trained on a vast corpus of text data and capable of being trained to respond to natural language inputs.

Option B - a proprietary, generative AI model pre-trained on large data sets, which uses transformer-based architectures to generate human-like responses based on multimodal user input.

Option A would be the best choice for the company because?

- A. It is built for large-scale, complex dialogues and would be more effective in handling high-volume customer inquiries.

- B. It is less expensive to run
- **C. It may be better suited for applications requiring customization.**
- D. It can handle voice commands and is more suitable for phone-based customer support.

Answer: C

Explanation:

Open-source models offer more customization flexibility, allowing organizations to fine-tune or adapt the model to fit their own workflows, branding, or compliance needs- making it preferable when deep control is needed.

From the AI Governance in Practice Report 2024:

"Open-source AI allows organizations to review, adapt, and control model behavior in line with organizational needs and policies." (p. 39)

NEW QUESTION # 130

Which of the following is an example of a high-risk application under the EU AI Act?

- A. A customer service chatbot tool.
- **B. A government-run social scoring tool.**
- C. A resume scanning tool that ranks applicants.
- D. An AI-enabled inventory management tool.

Answer: B

Explanation:

The EU AI Act categorizes certain applications of AI as high-risk due to their potential impact on fundamental rights and safety.

High-risk applications include those used in critical areas such as employment, education, and essential public services. A government-run social scoring tool, which assesses individuals based on their social behavior or perceived trustworthiness, falls under this category because of its profound implications for privacy, fairness, and individual rights. This contrasts with other AI applications like resume scanning tools or customer service chatbots, which are generally not classified as high-risk under the EU AI Act.

NEW QUESTION # 131

During the planning and design phases of the AI development life cycle, bias can be reduced by all of the following EXCEPT?

- A. Human oversight.
- B. Stakeholder involvement.
- **C. Feature selection.**
- D. Data collection.

Answer: C

Explanation:

Bias in AI can be reduced during the planning and design phases through stakeholder involvement, human oversight, and careful data collection. While feature selection is critical in the development phase, it does not specifically occur during planning and design.

Ensuring diverse stakeholder involvement and human oversight helps identify and mitigate potential biases early, and data collection ensures a representative dataset.

Reference: AIGP Body of Knowledge on AI Development Lifecycle and Bias Mitigation.

NEW QUESTION # 132

According to the GDPR, what is an effective control to prevent a determination based solely on automated decision-making?

- A. Define suitable measures to safeguard personal data.
- **B. Establish a human-in-the-loop procedure.**
- C. Provide a right to review automated decision.
- D. Provide a just-in-time notice about the automated decision-making logic.

Answer: B

Explanation:

The GDPR requires that individuals have the right to not be subject to decisions based solely on automated processing, including profiling, unless specific exceptions apply. One effective control is to establish a human-in-the-loop procedure (D), ensuring human oversight and the ability to contest decisions. This goes beyond just-in-time notices (A), data safeguarding (B), or review rights (C), providing a more robust mechanism to protect individuals' rights.

NEW QUESTION # 133

Which risk management framework/guide/standard focuses on value-based engineering methodology?

- A. IEEE 7000-2021 Standard Model Process for Addressing Ethical Concerns during System Design.
- B. ISO/IEC Guide 51 (Safety).
- C. Council of Europe Human Rights, Democracy, and the Rule of Law Assurance Framework (HUDERIA) for AI Systems.
- D. ISO 31000 Guidelines (Risk Management).

Answer: A

Explanation:

The IEEE 7000-2021 Standard focuses on a value-based engineering methodology for addressing ethical concerns during system design. This standard guides engineers and organizations in integrating ethical considerations into the design and development processes of AI systems, ensuring that these technologies are developed responsibly and align with human values. Reference: AIGP Study Material, section on risk management frameworks and standards.

NEW QUESTION # 134

.....

AIGP certification has great effect in this field and may affect your career even future. AIGP real questions files are professional and high passing rate so that users can pass the exam at the first attempt. High quality and pass rate make us famous and growing faster and faster. Many candidates compliment that AIGP Study Guide materials are best assistant and useful for qualification exams, they have no need to purchase other training courses or books to study, and only by practicing our AIGP Artificial Intelligence Governance exam braindumps several times before exam, they can pass exam in short time easily.
