

New AIP-210 Test Preparation - Quiz First-grade CertNexus Study AIP-210 Plan

P.S. Free 2025 CertNexus AIP-210 dumps are available on Google Drive shared by Braindumpsqa:
<https://drive.google.com/open?id=1vH5Cx8mltGibGrQp7ZdXWutGXV1uV>

Do you want to try our free demo of the AIP-210 study questions? Your answer must be yes. So just open our websites in your computer. You will have easy access to all kinds of free trials of the AIP-210 practice materials. You can apply for many types of AIP-210 Exam simulation at the same time. Once our system receives your application, it will soon send you what you need. Please ensure you have submitted the right email address. And you will have the demos to check them out.

During the learning process on our AIP-210 study materials, you can contact us anytime if you encounter any problems. The staff of AIP-210 actual exam will be online 24 hours, hoping to solve the problem in time for you. You can contact our services via email or online, as long as you leave your message, our services will give you suggestions right away. And even you have problem when you already bought our AIP-210 learning guide, we will still help you solve it.

Pass Guaranteed Perfect CertNexus - New AIP-210 Test Preparation

Selecting shortcut and using technique are to get better success. If you want to get security that you can pass CertNexus AIP-210 certification exam at the first attempt, Braindumpsqa CertNexus AIP-210 exam dumps is your unique and best choice. It is the dumps that you can't help praising it. There are no better dumps at the moment. The dumps can let you better accurate understanding questions point of AIP-210 Exam so that you can learn purposefully the relevant knowledge. In addition, if you have no time to prepare for your exam, you just remember the questions and the answers in the dumps. The dumps contain all questions that can appear in the real exam, so only in this way, can you pass your exam with no ease.

CertNexus AIP-210 Exam Syllabus Topics:

Topic	Details

Topic 1	• Train, validate, and test data subsets • Training and Tuning ML Systems and Models
Topic 2	• Design machine and deep learning models • Explain data collection • transformation process in ML workflow
Topic 3	• Recognize relative impact of data quality and size to algorithms • Engineering Features for Machine Learning
Topic 4	• Understanding the Artificial Intelligence Problem • Analyze the use cases of ML algorithms to rank them by their success probability
Topic 5	• Identify potential ethical concerns • Analyze machine learning system use cases

CertNexus Certified Artificial Intelligence Practitioner (CAIP) Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which two techniques are used to build personas in the ML development lifecycle? (Select two.)

- A. Population estimates
- B. Population variance
- C. Population triage
- D. Population resampling
- E. Population regression

Answer: A,C

Explanation:

Explanation

Personas are fictional characters that represent the potential users or customers of an ML system. Personas can help understand the needs, goals, preferences, and behaviors of the target audience, as well as design and evaluate the system from their perspective.

Some of the techniques that are used to build personas in the ML development lifecycle are:

Population estimates: Population estimates are statistical methods that estimate the size, characteristics, and distribution of a population based on a sample or a census. Population estimates can help identify and quantify the potential market segments and user groups for an ML system, as well as their demographics, locations, and behaviors.

Population triage: Population triage is a process of prioritizing and selecting the most relevant and representative personas for an ML system based on some criteria or metrics. Population triage can help focus on the key user needs and scenarios, as well as avoid creating too many or too few personas.

NEW QUESTION # 48

An HR solutions firm is developing software for staffing agencies that uses machine learning.

The team uses training data to teach the algorithm and discovers that it generates lower employability scores for women. Also, it predicts that women, especially with children, are less likely to get a high-paying job.

Which type of bias has been discovered?

- A. Technical
- B. Emergent
- C. Automation
- D. Preexisting

Answer: D

Explanation:

Explanation

Preexisting bias is a type of bias that originates from historical or social contexts, such as stereotypes, prejudices, or discriminations. Preexisting bias can affect the data or the algorithm used for machine learning, as well as the outcomes or decisions made by machine learning. Preexisting bias can cause unfair or harmful impacts on certain groups or individuals based on their attributes, such as gender, race, age, or disability³. In this case, the software that uses machine learning generates lower employability scores for women and predicts that women, especially with children, are less likely to get a high-paying job. This indicates that the software has preexisting bias against women, which may reflect the historical or social inequalities or expectations in the labor market.

NEW QUESTION # 49

When should the model be retrained in the ML pipeline?

- A. More data become available for the training phase.
- B. Some outliers are detected in live data.
- C. A new monitoring component is added.
- **D. Concept drift is detected in the pipeline.**

Answer: D

Explanation:

Explanation

When concept drift is detected in the pipeline, it means that the model performance has degraded over time due to changes in the underlying data generating process. This requires retraining the model with new data that reflects the current situation and updating the model parameters accordingly. References: Use pipeline parameters to retrain models in the designer - Azure Machine Learning | Microsoft Learn, Retraining Model During Deployment: Continuous Training and Continuous Testing

NEW QUESTION # 50

You create a prediction model with 96% accuracy. While the model's true positive rate (TPR) is performing well at 99%, the true negative rate (TNR) is only 50%. Your supervisor tells you that the TNR needs to be higher, even if it decreases the TPR. Upon further inspection, you notice that the vast majority of your data is truly positive. What method could help address your issue?

- A. Principal components analysis
- B. Quality filtering
- C. Normalization
- **D. Oversampling**

Answer: D

Explanation:

Explanation

Oversampling is a method that can help address the issue of imbalanced data, which is when one class is much more frequent than the other in the dataset. This can cause the model to be biased towards the majority class and have a low true negative rate. Oversampling involves creating synthetic samples of the minority class or replicating existing samples to balance the class distribution. This can help the model learn more from the minority class and improve the true negative rate. References: [Handling imbalanced datasets in machine learning], [Oversampling and undersampling in data analysis - Wikipedia]

NEW QUESTION # 51

Which of the following unsupervised learning models can a bank use for fraud detection?

- A. DBSCAN
- **B. Anomaly detection**
- C. k-means
- D. Hierarchical clustering

Answer: B

Explanation:

Anomaly detection is an unsupervised learning technique that identifies outliers or abnormal patterns in data, which can be useful for fraud detection. Anomaly detection algorithms can learn the normal behavior of transactions and flag the ones that deviate

significantly from the norm, indicating possible fraud.

NEW QUESTION # 52

.....

Our AIP-210 practice engine boosts high quality and we provide the wonderful service to the client. We boost the top-ranking expert team which compiles our AIP-210 guide prep elaborately and check whether there is the update every day and if there is the update the system will send the update automatically to the client. The content of our AIP-210 Preparation questions is easy to be mastered and seizes the focus to use the least amount of answers and questions to convey the most important information.
