1 / 5

We have thousands of satisfied customers around the globe so you can freely join your journey for the Appian Senior Developer (ACD201) certification exam with us. PassTorrent also guarantees that it will provide your money back if in any case, you are unable to pass the Appian ACD201 Exam but the terms and conditions are there that you must have to follow.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 2	<ul style="list-style-type: none">Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 3	<ul style="list-style-type: none">Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.

Topic 4	<ul style="list-style-type: none"> • Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.

ACD201 Certification Test Questions | Reliable ACD201 Guide Files

One of features of ACD201 training materials of us is that we can help you pass the exam just one time, and we also pass guarantee and money back guarantee for you fail to pass the exam. You just need to send your failure scanned to us, and we will give you full refund. In addition, ACD201 exam dumps contain both questions and answers, which can help you have a quickly check after you finish your practice. We also have online and offline chat service stuff, they possess the professional knowledge about the ACD201 Training Materials, if you have any questions just contact us.

Appian Senior Developer Sample Questions (Q64-Q69):

NEW QUESTION # 64

You're creating a support case record type while working on a support case management system. You want to track support case status changes.

You want to use record events to track this information.

Which record data source type is the most appropriate for you to use?

- A. Web service without data sync enabled
- B. Process Model source with data sync enabled
- **C. Database source with data sync enabled**

Answer: C

Explanation:

A database source with data sync enabled is required to use record events for tracking support case status changes, as Appian record events are only supported for synced record types with a database as the data source.

NEW QUESTION # 65

You need to configure your process model to store the result of an expression rule for every item in a list.

Your design must have the smallest memory footprint.

What should you do?

- A. Invoke a sub-process for each item in the list.
- **B. Configure a script task to use a!forEach() to iterate over each item in the list.**
- C. Execute MNI over a script task for each item in the list.
- D. Create a loop of smart service nodes in the process model and execute it for each item in the list.

Answer: B

Explanation:

Configuring a script task to use a!forEach() to iterate over each item in the list allows you to process all items within a single task, minimizing the memory footprint compared to multiple subprocesses or smart service loops.

NEW QUESTION # 66

You're creating a point-of-sale (POS) system for a customer which can associate the items in a transaction to a customer based on a membership number. The item stock table and the customer sales record are hosted elsewhere and need to be written to via POST APIs from an Appian process model. This all occurs within a transaction process model that you're creating.

Which two steps should you perform to design your process model to improve process memory? (Choose two.)

- A. Create the two POST APIs as synchronous subprocesses.

- B. Ensure that the entire process is activity-chained so that the person entering the transaction knows when the process is completed.
- C. Add a terminate process node to the end of the process.
- D. Create the two POST APIs as asynchronous subprocesses.

Answer: C,D

Explanation:

Creating the POST API calls as asynchronous subprocesses allows them to run independently, reducing memory usage in the main process.

Adding a terminate process node at the end ensures the process completes and releases memory as soon as its work is finished.

NEW QUESTION # 67

You're developing a record view for a case management system that enables users to upload files to a specific location within an external records application.

Your requirements are:

In this record view, there should be a record action that allows the user to upload a file to the interface and configure the metadata (name, author, file size) before submitting.

If the file is larger than 250MB, the user will be notified that the file will be uploaded overnight.

Once the file has been successfully uploaded, the file will appear on the record view and the user can interact with the file.

Which two pieces of user-facing information must be captured from this business process so that you can develop this record view? (Choose two.)

- A. How the user wishes to interact with these files in the record view - as a grid or a series of card layouts.
- B. The time of file upload if the file is less than 250MB.
- C. The email of the system administrator so that an email can be sent to them if the integration fails.
- D. The location of where the file will be uploaded to in the external records application.

Answer: A,D

Explanation:

You need to know the target location in the external records application to properly upload the file.

Understanding how users want to interact with files (grid or card layout) is essential for designing the record view interface.

NEW QUESTION # 68

You're building an order management system.

You need to create a field that displays the total number of days it took to deliver each order, and show and sort by this data in a read-only grid. The data must be available in real-time.

Which function is the most appropriate for calculating this value?

- A. calworkdays()
- B. a!subtractDateTime()
- C. a!customFieldDateDiff()

Answer: C

Explanation:

a!customFieldDateDiff() is specifically designed for calculating date differences as custom record fields, enabling sorting and real-time calculation in read-only grids.

NEW QUESTION # 69

.....

The internet is transforming society, and distance is no longer an obstacle. You can download our ACD201 exam simulation from our official website, which is a professional platform providing the most professional ACD201 practice materials. You can get them within 15 minutes without waiting. What is more, you may think these high quality ACD201 Preparation materials require a huge investment on them. Actually we eliminate the barriers blocking you from our ACD201 practice materials. The price of our ACD201 exam question is quite favourable for you to buy.
