New Associate-Cloud-Engineer Test Dumps - Associate-Cloud-Engineer New Braindumps Ebook

P.S. Free 2025 Google Associate-Cloud-Engineer dumps are available on Google Drive shared by ITExamSimulator:
https://drive.google.com/open?id=1TkdRxKzaR5ysCrQE_2_8Wqv0eWlNhJQh

Most of the candidates who plan to take the Associate-Cloud-Engineer certification exam lack updated practice questions to ace it on the first attempt. Due to this, they fail the Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) test, losing money and time. And in some cases, applicants fail on the second attempt as well because they don't prepare with Associate-Cloud-Engineer Actual Exam questions. This results in not only the loss of resources but also the motivation of the candidate.

Successful completion of the Google Associate-Cloud-Engineer Exam demonstrates that an individual has the knowledge and skills necessary to deploy and manage applications on GCP. Associate-Cloud-Engineer exam covers a wide range of topics, including creating GCP projects, deploying applications, networking, storage, compute, and security. Candidates who pass the exam will be able to demonstrate their proficiency in using GCP services to design and deploy highly available, scalable, and secure applications. Google Associate Cloud Engineer Exam certification is highly valued in the industry and can open up new job opportunities for individuals seeking to advance their careers in cloud computing.

Google Associate-Cloud-Engineer New Braindumps Ebook, Associate-Cloud-Engineer Exam Topics

ITExamSimulator has designed Associate-Cloud-Engineer pdf dumps format that is easy to use. Anyone can download Google Associate-Cloud-Engineer pdf questions file and use it from any location or at any time. Google PDF Questions files can be used on laptops, tablets, and smartphones. Moreover, you will get actual Google Associate-Cloud-Engineer Exam Questions in this Google Associate-Cloud-Engineer pdf dumps file.

The Google Associate-Cloud-Engineer Exam covers a range of topics, including setting up a cloud solution environment, deploying and implementing cloud solutions, configuring access and security, monitoring and logging cloud operations, and managing cloud resources. It is a comprehensive exam that requires a strong understanding of Google Cloud technologies and their applications.

Deploying & Implementing Cloud Solutions

To answer the questions related to this domain, the examinees need to show that they know how to deploy and implement Compute Engine resources, Google Kubernetes Engine resources, App Engine resources, Cloud Run resources, and Cloud Functions resources. Moreover, they should have a good understanding of how to deploy and implement data solutions as well as networking resources. They also need to have the capacity to perform the deployment of a solution with the help of Cloud Marketplace. Additionally, their ability to perform the deployment of application infrastructure with the help of Cloud Deployment Manager is required.

Google Associate Cloud Engineer Exam Sample Questions (Q293-Q298):

NEW QUESTION # 293
You have been asked to create robust Virtual Private Network (VPN) connectivity between a new Virtual Private Cloud (VPC) and a remote site. Key requirements include dynamic routing, a shared address space of 10.19.0.1/22, and no overprovisioning of tunnels during a failover event. You want to follow Google-recommended practices to set up a high availability Cloud VPN. What should you do?

- A. Use an automatic mode VPC network, configure static routes, and use active/active routing
- B. Use a custom mode VPC network, configure static routes, and use active/passive routing
- C. Use an automatic mode VPC network, use Cloud Router border gateway protocol (BGP) routes and configure policy-based routing
- D. Use a custom mode VPC network use Cloud Router border gateway protocol (86P) routes, and use active/passive routing

Answer: C

NEW QUESTION # 294
You are building an application that stores relational data from users. Users across the globe will use this application. Your CTO is concerned about the scaling requirements because the size of the user base is unknown. You need to implement a database solution that can scale with your user growth with minimum configuration changes. Which storage solution should you use?

- A. Cloud SQL
- B. Cloud Firestore
- C. Cloud Spanner
- D. Cloud Datastore

Answer: C

Explanation:
Cloud Spanner is a relational database and is highly scalable. Cloud Spanner is a highly scalable, enterprise- grade, globally- distributed, and strongly consistent database service built for the cloud specifically to combine the benefits of relational database structure with a non-relational horizontal scale. This combination delivers high-performance transactions and strong consistency across rows, regions, and continents with an industry- leading 99.999% availability SLA, no planned downtime, and enterprise- grade security Ref: https://cloud.google.com/spanner Graphical user interface, application, Teams Description automatically generated

	CLOUD SPANNER	TRADITIONAL RELATIONAL	TRADITIONAL NON-RELATIONAL
Schema	✓ Yes	✓ Yes	✗ No
SQL	✓ Yes	✓ Yes	✗ No
Consistency	✓ Strong	✓ Strong	✗ Eventual
Availability	✓ High	✗ Failover	✓ High
Scalability	✓ Horizontal	✗ Vertical	✓ Horizontal
Replication	✓ Automatic	↻ Configurable	↻ Configurable

NEW QUESTION # 295

Your company runs one batch process in an on-premises server that takes around 30 hours to complete. The task runs monthly, can be performed offline, and must be restarted if interrupted. You want to migrate this workload to the cloud while minimizing cost. What should you do?

- A. Migrate the workload to a Google Kubernetes Engine cluster with Preemptible nodes.
- B. Migrate the workload to a Compute Engine Preemptible VM.
- C. Create an Instance Template with Preemptible VMs On. Create a Managed Instance Group from the template and adjust Target CPU Utilization. Migrate the workload.
- D. Migrate the workload to a Compute Engine VM. Start and stop the instance as needed.

Answer: A

Explanation:
Explanation/Reference: https://cloud.google.com/kubernetes-engine/docs/tutorials/migrating-node-pool

NEW QUESTION # 296

You have one GCP account running in your default region and zone and another account running in a non-default region and zone. You want to start a new Compute Engine instance in these two Google Cloud Platform accounts using the command line interface. What should you do?

- A. Create two configurations using gcloud config configurations create [NAME]. Run gcloud config configurations activate [NAME] to switch between accounts when running the commands to start the Compute Engine instances.
- B. Activate two configurations using gcloud configurations activate [NAME]. Run gcloud configurations list to start the Compute Engine instances.
- C. Activate two configurations using gcloud configurations activate [NAME]. Run gcloud config list to start the Compute Engine instances.
- D. Create two configurations using gcloud config configurations create [NAME]. Run gcloud configurations list to start the Compute Engine instances.

Answer: A

Explanation:
"Run gcloud configurations list to start the Compute Engine instances". How the heck are you expecting to "start" GCE instances doing "configuration list".
Each gcloud configuration has a 1 to 1 relationship with the region (if a region is defined). Since we have two different regions, we would need to create two separate configurations using gcloud config configurations create Ref:
https://cloud.google.com/sdk/gcloud/reference/config/configurations/create Secondly, you can activate each configuration independently by running gcloud config configurations activate [NAME] Ref:
https://cloud.google.com/sdk/gcloud/reference/config/configurations/activate Finally, while each configuration is active, you can run the gcloud compute instances start [NAME] command to start the instance in the configurations region.
https://cloud.google.com/sdk/gcloud/reference/compute/instances/start

NEW QUESTION # 297

You are the organization and billing administrator for your company. The engineering team has the Project Creator role on the organization. You do not want the engineering team to be able to link projects to the billing account. Only the finance team should be able to link a project to a billing account, but they should not be able to make any other changes to projects. What should you do?

- A. Assign the finance team the Billing Account User role on the billing account and the Project Billing Manager role on the organization.
- B. Assign the finance team only the Billing Account User role on the billing account.
- C. Assign the engineering team the Billing Account User role on the billing account and the Project Billing Manager role on the organization.
- D. Assign the engineering team only the Billing Account User role on the billing account.

Answer: A

Explanation:

Explanation

From this source:

https://cloud.google.com/billing/docs/how-to/custom-roles#permission_association_and_inheritance

"For example, associating a project with a billing account requires the billing.resourceAssociations.create permission on the billing account and also the resourcemanager.projects.createBillingAssignment permission on the project. This is because project permissions are required for actions where project owners control access, while billing account permissions are required for actions where billing account administrators control access. When both should be involved, both permissions are necessary."
