100% Pass Quiz 2025 High Hit-Rate B2C-Commerce-Architect: New Salesforce Certified B2C Commerce Architect Braindumps Sheet

Before you really attend the B2C-Commerce-Architect exam and choose your materials, we want to remind you of the importance of holding a certificate like this one. Obtaining a B2C-Commerce-Architect certificate like this one can help you master a lot of agreeable outcomes in the future, like higher salary, the opportunities to promotion and being trusted by the superiors and colleagues. All these agreeable outcomes are no longer dreams for you. And with the aid of our B2C-Commerce-Architect Exam Preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our B2C-Commerce-Architect learning questions.

Salesforce Certified B2C Commerce Architect Sample Questions (Q31-Q36):

NEW QUESTION # 31

A new project for a Client will involve a few different Integrations to their middleware system resulting in four different web services.

All will use the same credentials to the middleware. Each will have the same timeout, but will require a separate log file prefix. How should the Architect set this up with the Service framework using a minimal set of configuration?

- A. One Service Configuration, Four Service Profiles, One Service Credential.
- B. Four Service Configurations, Four Service Profiles, One Service Credential
- **C. Four Service Configurations, One Service Profile, One Service Credential.**
- D. Four Service Configurations, Four Service Profiles, Four Service Credentials

Answer: C

Explanation:

For setting up multiple integrations that require the same credentials and timeout settings but need separate log file prefixes:

Four Service Configurations are needed to specify the unique endpoint and other specifics for each of the four web services.

One Service Profile can be used for all these configurations because they share the same timeout and other settings, optimizing the configuration process.

One Service Credential is sufficient since all services authenticate with the same credentials, simplifying credential management and security handling.

This setup reduces redundancy and complexity in the service framework, ensuring a streamlined and efficient integration process while meeting all specified requirements.

NEW QUESTION # 32

An Architect notified by the Business that order conversion dramatically dropped a few hours after go live.

Further investigation points out that customers cannot proceed to checkout anymore. The Architect is aware that a custom inventory checks with a third-party API is enforced at the beginning of checkout, and that customers are redirected to the basket page when items are no longer in stock. Which tool can clearly confirm that the problem is indeed caused by the inventory check?

- A. Realtime Report from Reports and Dashboards
- B. Sales Dashboard from Reports and Dashboards
- **C. Service Status from Business Manager**
- D. Pipeline Profiler from Business Manager

Answer: C

NEW QUESTION # 33

The client provided these business requirements:

* The B2C Commerce storefront will integrate with the client's Order Management System (OMS).

* The storefront will provide real-time order export of successfully pieced orders. The OMS supports both web service export and SFTP batch order export, but the client has expressed concern about the availability of the OMS.

Which two solutions satisfy the requirements and address the OMS reliability concern?

Choose 2 answers

- **A. Implement a batch export of orders to SFTP, excluding exported orders. This runs as a scheduled job with a high-frequency run rate and marks processed orders as exported upon success.**
- **B. Implement a batch export of orders via web service, excluding exported orders. This runs as a scheduled job with an hourly run rate and marks processed orders as exported upon success.**
- C. Implement a Live export of orders during checkout via SFTP, marking the processed order as exported when it has completed successfully.
- D. Implement a live export of orders during checkout via web service, marking the processed order as exported when the AM returns successfully.

Answer: A,B

Explanation:

Given the concerns about the reliability of the OMS, implementing scheduled batch exports ensures that order data is not lost due to potential OMS downtime and allows for reattempting failed exports. Option B uses SFTP for a high-frequency batch export, which can be scheduled to run multiple times a day, ensuring minimal delay in order synchronization while marking orders as exported upon successful transmission.

Option C provides a similar safeguard but via web service, which can be scheduled to run hourly. Both methods enable tracking of export status and can handle temporary downtimes by reattempting the export until successful, aligning with the need for reliability in

integration processes.

NEW QUESTION # 34

The client provided these business requirements:

- * The B2C Commerce platform will integrate with the Client's Order Management System (OMS).
- * The OMS supports Integration using REST services.
- * The OMS is hosted on the Client's infrastructure.

What configurations are needed for this integration with the OMS?

- **A. A service configuration, a service profile configuration, and a service credential configuration.**
- B. A service configuration, a hostname alias configuration, and a user credential configuration.
- C. A service configuration, a service profile configuration, and a user credential configuration.
- D. A service profile configuration, a WAF configuration, and a service credential configuration.

Answer: A

Explanation:

For integrating the B2C Commerce platform with the client's OMS using REST services, the required configurations include:

Service Configuration: This specifies the service endpoints, HTTP methods, and any other service-specific settings necessary for the integration.

Service Profile Configuration: This defines the behavior of the service such as timeout settings, retry logic, and cache settings.

Service Credential Configuration: This involves setting up the credentials that will be used to authenticate the requests to the client's OMS. These credentials are often managed securely through encrypted storage and retrieval mechanisms.

These configurations ensure secure, efficient, and reliable communication between the B2C Commerce platform and the client's OMS, adhering to best practices in web service integration.

NEW QUESTION # 35

Northern Trail Outfitters (NTO) just went live after migrating its online shop to B2C Commerce from a custom eCommerce platform. NTO now needs to migrate its orders. NTO cannot provide a B2C Commerce feed, but a custom export from its current eCommerce site.

What are the correct steps to migrate these orders to B2C Commerce?

- **A. Receive the orders file and use a Job to generate the orders in B2C Commerce schema. Create a B2C Commerce Support ticket to ask them to import the orders.**
- B. Receive the orders file and use a job to generate the orders in B2C Commerce schema. Ask the client to import them on production before the launch.
- C. Receive the orders file and use a Job to place new orders in B2C Commerce with the order data received.
- D. Create a B2C Commerce Support ticket and ask them to import the order files received from Northern Trail Outfitters.

Answer: A

Explanation:

For migrating historical orders from a custom eCommerce platform to B2C Commerce:

Option D: Involves receiving the exported order file, processing it into the B2C Commerce schema to ensure compatibility, and then coordinating with B2C Commerce Support for importing these orders into the live environment. This process ensures that the orders are correctly formatted and integrated, maintaining data integrity and continuity of business analytics and records.

This approach is essential for a successful migration that maintains the operational and historical integrity of order data within the new platform.

NEW QUESTION # 36

.....

Salesforce Certified B2C Commerce Architect has introduced practice test (desktop and web-based) for the students so they can practice anytime in an easy way. The Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) practice tests are customizable which means the students can set the time and questions according to their needs. The B2C-Commerce-Architect Practice Tests have unlimited tries so that the users don't make extra mistakes when giving it the next time. Candidates can access the previously given tries from the history and avoid making mistakes in the final examination.
