# BCS Practitioner Certificate in Business Analysis Practice v5.0 Sample Questions (Q62-Q67):

NEW QUESTION # 62
A report has been created into improving the scheduling of physio appointments at a major hospital An extract reads
'The scheduling team have a strong set of skills that will not need to be updated However, the team should be split into two. one dealing with inpatients and one with outpatients The introduction of a new telephony software and an online booking system will also require changes to the process' How might these changes be BEST presented to communicate with the scheduling team'?

- A. Prototype
- B. POPIT
- C. Business Process Model
- D. Business Activity Model

**Answer: A**

Explanation:
Explanation
A prototype is a simplified version of a proposed system or product that can be used to demonstrate its functionality and usability to the stakeholders. A prototype can be useful for communicating changes that involve new technology or software, as it allows the users to interact with the system and provide feedback.
Therefore, option D is the best choice, as it would allow the scheduling team to see how the new telephony software and online booking system would work and how they would affect their process. Option A is not a good choice, as a business process model is a graphical representation of the activities, inputs, outputs and resources involved in a business process. It would not show how the new software would work or how the team would be split. Option B is not a good choice, as a business activity model is a high-

level view of the business activities that take place within an organisation. It would not show the details of the scheduling process or the new software. Option C is not a good choice, as POPIT is an acronym for People, Organisation, Process, Information and Technology. It is a framework for taking a holistic view of a business situation, but it is not a tool for communicating changes. References: BCS Practitioner Certificate in BAP Specimen, page 16.

**NEW QUESTION # 63**

BuildCo is small building company with the stall. The owner to reduce time spent on administration by simplifying the company's paperwork. This paperwork includes provides quotes and invoices, as well as managing orders and receipts for building materials. Most of the paperwork is completed manually and copies are stored in filing cabinets. However, quotes and invoices are produced on a word processor and the stored on a computer, with printed copies also stored in the filing cabinets. The owner is not sure that all the current paperwork is necessary.

Which investigation technique would be MOST effective in establishing the need for item of paperwork?

- A. Document Analysis
- B. Interviews
- C. Questionnaire
- D. Workshop

**Answer: A**

Explanation:

Document analysis is a technique for collecting information from existing documents within an organisation or project. It helps to understand the current situation or problem and identify any gaps or issues that may exist. Therefore, option D is the correct answer, as document analysis would be the most effective technique in establishing the need for each item of paperwork. Document analysis would help to review the content and purpose of each item of paperwork and compare it with the organisation's objectives and requirements. Document analysis would help to evaluate the usefulness and relevance of each item of paperwork and identify any duplication or redundancy that may exist. Document analysis would help to recommend any changes or improvements to each item of paperwork and justify them with evidence and rationale. Option A is not a correct answer, as questionnaire is not the most effective technique in establishing the need for each item of paperwork. Questionnaire is a technique for collecting information from stakeholders by asking them predefined questions in written form. It helps to elicit quantitative or qualitative data from a large number of stakeholders in an efficient and consistent way. Questionnaire would not be the most effective technique in establishing the need for each item of paperwork, as it may not provide enough detail or explanation for each item of paperwork and may be influenced by stakeholder bias or preference. Option B is not a correct answer, as workshop is not the most effective technique in establishing the need for each item of paperwork. Workshop is a technique for conducting group discussions and activities with stakeholders to elicit, analyse, validate and prioritise their views and needs. It helps to facilitate effective communication and collaboration among stakeholders and resolve conflicts or issues. Workshop would not be the most effective technique in establishing the need for each item of paperwork, as it may not be practical or feasible to involve all relevant stakeholders in a workshop and may be affected by stakeholder dynamics or politics. Option C is not a correct answer, as interviews are not the most effective technique in establishing the need for each item of paperwork. Interviews are a technique for collecting information from stakeholders by asking them open-ended questions in verbal form. It helps to elicit rich and detailed information from individual stakeholders in an interactive and flexible way. Interviews would not be the most effective technique in establishing the need for each item of paperwork, as it may be time-consuming and costly to interview all relevant stakeholders and may be subject to stakeholder interpretation or opinion.

**NEW QUESTION # 64**

Adiyan has been considering the feasibility of introducing a new payments method into his company His draft report reads 'The new payment method has not yet been widely adopted although it has the backing of all the big phone brands. Our current payments system will be upgraded next month to take payment as part of a scheduled release This method of payment will be supported under our current license deal Trials have shown that the technology will scale to our customer base and cyber security testing is encouraging' Which of the following is the BEST description of the areas of Technical feasibility mentioned in the report?

- A. Proven. Compatible, Secure. Scalable
- B. Timely, Reliable, Proven, Architectural Alignment
- C. Timely, Compatible. Secure, Scalable
- D. Reliable. Compatible, Secure. Architectural Alignment

**Answer: A**

Explanation:

Technical feasibility is the extent to which a proposed business change or solution is possible and realistic from a technical perspective. It helps to assess whether a proposed business change or solution can be developed, implemented and maintained using the available or required technology. Therefore, option A is the correct answer, as it describes the areas of technical feasibility mentioned in the report. Proven is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution has been tested and verified by previous or existing users or applications. It helps to ensure reliability and quality of the technology. An example of proven in the report is the new payment method has not yet been widely adopted although it has the backing of all the big phone brands. Compatible is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can work or integrate with other existing or required technologies. It helps to ensure interoperability and functionality of the technology. An example of compatible in the report is our current payments system will be upgraded next month to take payment as part of a scheduled release. Secure is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can protect or prevent unauthorised access, use, modification or disclosure of data or information. It helps to ensure confidentiality, integrity and availability of the technology. An example of secure in the report is cyber security testing is encouraging. Scalable is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can handle or adapt to changes in demand, volume or performance. It helps to ensure efficiency and flexibility of the technology. An example of scalable in the report is trials have shown that the technology will scale to our customer base. Option B is not a correct answer, as it does not describe all the areas of technical feasibility mentioned in the report. Timely is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can be developed, implemented and maintained within the available or required time frame. It helps to ensure punctuality and speed of the technology. There is no example of timely in the report. Option C is not a correct answer, as it does not describe all the areas of technical feasibility mentioned in the report. Reliable is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can perform consistently and accurately without errors or failures. It helps to ensure dependability and accuracy of the technology. There is no example of reliable in the report. Architectural alignment is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can fit or align with other existing or required architectures, such as business, data or application architectures. It helps to ensure consistency and coherence of the technology. There is no example of architectural alignment in the report. Option D is not a correct answer, as it does not describe any of the areas of technical feasibility mentioned in the report.

## NEW QUESTION # 65

TeamClothing sells clothes through its shops based around the country If a customer in a shop cannot find the item they wish to buy. a sales assistant can order it for them online and when it arrives, the customer can then collect the item from the shop Customers may also order directly from TeamClothing's website Orders from the website are usually delivered to the customer's home address Online customers also automatically receive a monthly catalogue from the firm, which lists current offers Three events are of particular interest:

Shop sales assistants ordering items for a customer online Customers ordering through the website Sending a monthly catalogue to website customers How would these events be classified'?

- A. External = 2, Time-based = 1
- B. Internal = 2; Time-based = 1.
- C. External = 1; Time-based = 1; Internal = 1.
- D. External = 3

**Answer: A**

Explanation:
Explanation
An event is something that happens or occurs within or outside an organisation or project that triggers or affects an activity or process. Events can be classified into three types: external, internal and time-based.
Therefore, option B is the correct answer, as it correctly classifies the events of interest in this scenario according to their types. External events are events that originate from outside the organisation or project and are beyond its control or influence. An example of an external event in this scenario is customers ordering through the website, as it originates from outside TeamClothing and is beyond its control or influence. There are two external events in this scenario. Internal events are events that originate from within the organisation or project and are under its control or influence. An example of an internal event in this scenario is shop sales assistants ordering items for a customer online, as it originates from within TeamClothing and is under its control or influence. There are no internal events in this scenario. Time-based events are events that occur at regular intervals or on specific dates or times. An example of a time-based event in this scenario is sending a monthly catalogue to website customers, as it occurs at regular intervals (every month). There is one time-based event in this scenario.

## NEW QUESTION # 66

Paul has been struggling to make his farm profitable for a number of years Recently, an energy firm has asked him if it can survey his land in order to determine if there is natural gas deep under his fields If there is. they will pay him for the extracted gas.

Paul has discussed this request with his business partner, explaining that he would like to explore the possibility as he feels that any subsequent extraction process is safe, will cause minimal damage to the farm, and will return the farm to profitability. Paul's business partner disagrees, believing that the process for extracting the gas is dangerous, that the machinery will spoil the landscape and that it would undermine the vision they had of living off the land.

On which element of CATWOE are Paul and his business partner in disagreement?

- A. Work view
- B. Customer
- C. Transformation
- D. Actor

**Answer: A**

Explanation:
Explanation
CATWOE is a technique for exploring stakeholder business perspectives by identifying six elements:
Customer, Actor, Transformation, Worldview, Owner and Environment. It helps to understand how different stakeholders perceive a business situation or problem and what they expect from a solution. Therefore, option D is the correct answer, as Paul and his business partner are in disagreement on their worldview element of CATWOE. Worldview is the element that describes the beliefs, values, assumptions or principles that underpin a stakeholder's perspective. It helps to explain why a stakeholder thinks that a business situation or problem is worth addressing or solving. Paul and his business partner have different worldviews regarding the possibility of extracting natural gas from their land. Paul believes that it is a safe, profitable and reasonable option that will improve their financial situation. His business partner believes that it is a dangerous, unattractive and unacceptable option that will compromise their vision of living off the land. Option A is not a correct answer, as Paul and his business partner are not in disagreement on their customer element of CATWOE. Customer is the element that describes who benefits from or is affected by a business situation or problem or its solution. It helps to identify who are the main beneficiaries or victims of a business situation or problem or its solution. Paul and his business partner have the same customer, which is themselves as the owners of the farm. Option B is not a correct answer, as Paul and his business partner are not in disagreement on their actor element of CATWOE. Actor is the element that describes who carries out or performs a business situation or problem or its solution. It helps to identify who are responsible for implementing or delivering a business situation or problem or its solution. Paul and his business partner have the same actor, which is themselves as the owners of the farm. Option C is not a correct answer, as Paul and his business partner are not in disagreement on their transformation element of CATWOE. Transformation is the element that describes what changes or processes take place in a business situation or problem or its solution. It helps to identify what inputs are converted into outputs in a business situation or problem or its solution. Paul and his business partner have the same transformation, which is extracting natural gas from their land. References: BCS Practitioner Certificate in BAP Specimen, page 37.

## NEW QUESTION # 67

......

Stop wasting time on meaningless things. There are a lot wonderful things waiting for you to do. You still have the opportunities to become successful and wealthy.
