

# New C-ABAPD-2309 Exam Bootcamp, C-ABAPD-2309 New Study Notes

P.S. Free & New C-ABAPD-2309 dumps are available on Google Drive shared by Lead2PassExam:  
[https://drive.google.com/open?id=1rMUj9DkgfPzlkavlt2psd\\_9wTXWWVPiJ](https://drive.google.com/open?id=1rMUj9DkgfPzlkavlt2psd_9wTXWWVPiJ)

The Lead2PassExam is one of the top-rated and renowned platforms that have been offering real and valid SAP Certified Associate - Back-End Developer - ABAP Cloud (C-ABAPD-2309) practice test questions for many years. During this long time period countless SAP Certified Associate - Back-End Developer - ABAP Cloud (C-ABAPD-2309) exam candidates have passed their dream SAP Certified Associate - Back-End Developer - ABAP Cloud (C-ABAPD-2309) certification exam and they are now certified SAP professionals and pursuing a rewarding career in the market.

## SAP C-ABAPD-2309 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Object-oriented design: It measures your knowledge about encapsulation, upcast, inheritance, polymorphism, and interfaces. Moreover, the topic evaluates your knowledge about constructor calls, Exception classes, and singleton pattern.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>ABAP core data services and data modeling: It focuses on Core Data Services (CDS) views, SAP HANA database tables, foreign key relationships, and annotations.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>ABAP SQL and code pushdown: It discusses ABAP SQL, arithmetic expressions, manage dates, and create joins.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>ABAP RESTful Application Programming Model: This topic explains the ABAP Restful Application Programming model, ABAP development, and the architecture of the ABAP Restful Application Programming model.</li></ul>

## Free PDF Quiz 2025 SAP Unparalleled C-ABAPD-2309: New SAP Certified Associate - Back-End Developer - ABAP Cloud Exam Bootcamp

Lead2PassExam is a convenient website to provide service for many of the candidates participating in the IT certification exams. A lot of candidates who choose to use the Lead2PassExam's product have passed IT certification exams for only one time. And from the feedback of them, helps from Lead2PassExam are proved to be effective. Lead2PassExam's expert team is a large team composed of senior IT professionals. And they take advantage of their expertise and abundant experience to come up with the useful training materials about C-ABAPD-2309 Certification Exam. Lead2PassExam's simulation test software and related questions of C-ABAPD-2309 certification exam are produced by the analysis of C-ABAPD-2309 exam outline, and they can definitely help you pass your first time to participate in C-ABAPD-2309 certification exam.

### SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q43-Q48):

#### NEW QUESTION # 43

In ABAP SQL, which of the following retrieves the association field `_Airline-Name` of a CDS view?

- A. `"_Airline Name`
- B. `@_Airline-Name`
- C. `/_Airline Name`
- D. `\_Airline-Name`

**Answer: B**

Explanation:

In ABAP SQL, the syntax to retrieve the association field of a CDS view is to use the `@` sign followed by the association name and the field name, separated by a period sign (`.`). For example, to retrieve the association field `_Airline-Name` of a CDS view, the syntax is `@_Airline.Name`. This syntax allows the access to the fields of the target data source of the association without explicitly joining the data sources<sup>1</sup>. The other options are incorrect because they use the wrong symbols or formats to access the association field.

#### NEW QUESTION # 44

You are designing the following select statement in ABAP Open SQL:

```
1 DATA gt_flights type standard table of demo_cds_flights
2
3 SELECT
4
5 FROM demo_cds_flights
6
7 FIELDS carrid, connid, fldate, SUM(payment_sum), currency
8
9 WHERE fldate > @sy-datum
10
11 GROUP BY carrid, connid, fldate
12
13 ORDER BY carrid, connid
14
15
```

To adhere to the most recent ABAP SQL syntax conventions from SAP, on which line must you insert the "INTO TABLE `@gt_flights`" clause to complete the SQL statement?

- A. #6
- B. #4
- C. #8

- D. #15

Answer: D

#### NEW QUESTION # 45

You want to define the following CDS view entity with an input parameter:

Define view entity Z\_CONVERT With parameters currency : ???

Which of the following can you use to replace "???" Note: There are 2 correct answers to this question.

- A. A data element
- B. A built-in ABAP Dictionary type
- C. built-in ABAP type
- D. A component of an ABAP Dictionary structure

Answer: A,C

Explanation:

Explanation

The possible replacements for "???" in the CDS view entity definition with an input parameter are A. built-in ABAP type and C. A data element. These are the valid types that can be used to specify the data type of an input parameter in a CDS view entity. A built-in ABAP type is a predefined elementary type in the ABAP language, such as abap.char, abap.numc, abap.dec, etc. A data element is a reusable semantic element in the ABAP Dictionary that defines the technical attributes and the meaning of a field<sup>12</sup>. For example:

The following code snippet defines a CDS view entity with an input parameter currency of type abap.cuky, which is a built-in ABAP type for currency key:

Define view entity Z\_CONVERT With parameters currency : abap.cuky as select from ... { ... } The following code snippet defines a CDS view entity with an input parameter currency of type waers, which is a data element for currency key:

Define view entity Z\_CONVERT With parameters currency : waers as select from ... { ... } You cannot do any of the following:

B: A built-in ABAP Dictionary type: This is not a valid type for an input parameter in a CDS view entity. A built-in ABAP Dictionary type is a predefined elementary type in the ABAP Dictionary, such as CHAR, NUMC, DEC, etc. However, these types cannot be used directly in a CDS view entity definition. Instead, they have to be prefixed with abap. to form a built-in ABAP type, as explained above<sup>12</sup>.

D: A component of an ABAP Dictionary structure: This is not a valid type for an input parameter in a CDS view entity. A component of an ABAP Dictionary structure is a field that belongs to a structure type, which is a complex type that consists of multiple fields. However, an input parameter in a CDS view entity can only be typed with an elementary type, which is a simple type that has no internal structure<sup>12</sup>.

#### NEW QUESTION # 46

In this nested join below in which way is the join evaluated?

```

1 SELECT FROM t a AS a
2 LEFT OUTER JOIN t b AS b
3 LEFT OUTER JOIN t c AS c
4 ON c-f1 = b-f1 AND c-f2 = b-f2
5 ON b-f1 = a-f1
6 WHERE

```

- A. From the left to the right in the order of the tables:
  1. a is joined with b
  2. b is joined with c
- B. From the top to the bottom in the order of the on conditions
  1. b is joined with c
  2. a is joined with b
- C. From the right to the left in the order of the tables:
  - 1.

- b is joined with c.
  - 2.
  - b is joined with a.
- D. From the bottom to the top in the order of the on conditions:
  - 1.
  - a is joined with b
  - 2.
  - b is joined with c

**Answer: B**

Explanation:

Explanation

The nested join is evaluated from the top to the bottom in the order of the ON conditions. This means that the join expression is formed by assigning each ON condition to the directly preceding JOIN from left to right.

The join expression can be parenthesized implicitly or explicitly to show the order of evaluation. In this case, the implicit parentheses are as follows:

SELECT \* FROM (a INNER JOIN (b INNER JOIN c ON b~c = c~c) ON a~b = b~b) This means that the first join expression is b INNER JOIN c ON b~c = c~c, which joins the columns of tables b and c based on the condition that b~c equals c~c. The second join expression is a INNER JOIN (b INNER JOIN c ON b~c = c~c) ON a~b = b~b, which joins the columns of table a and the result of the first join expression based on the condition that a~b equals b~b. The final result set contains all combinations of rows from tables a, b, and c that satisfy both join conditions.

#### NEW QUESTION # 47

When processing a loop with the statement DO... ENDDO, what system variable contains the implicit loop counter?

- A. sy-index
- B. sy-labix
- C. sy-linno
- D. sy-subrc

**Answer: A**

Explanation:

When processing a loop with the statement DO... ENDDO, the system variable that contains the implicit loop counter is sy-index. The loop counter is a numeric value that indicates how many times the loop has been executed. The loop counter is initialized to 1 before the first execution of the loop and is incremented by 1 after each execution. The loop counter can be used to control the number of loop iterations or to access the loop elements by index. The loop counter can also be accessed or modified within the loop body, but this is not recommended as it may cause unexpected results or errors<sup>1</sup>.

For example, the following code snippet uses the loop counter sy-index to display the numbers from 1 to 10:

```
DO 10 TIMES. WRITE: / sy-index. ENDDO.
```

The output of this code is:

```
1 2 3 4 5 6 7 8 9 10
```
